115. Under the Provincial Settlements all expenditure on Famine Relief, which is not borne by Local Funds, is in the first place charged in the Provincial column. But when the expenditure is of the magnitude which it has reached this year and is expected to reach next year, it is much more than Provincial Balances can meet and the charge is necessarily borne by Imperial also. The principle to be followed is stated in paragraph 67 above, and applying that principle the Government of India have, after consideration of the financial position of each Province, distributed the expenditure on Famine Relief in 1896-97 as follows:—

	Imperial.	Provincial.	Local.
	Rx.	Rx.	Rx.
Central Provinces . . .	205,000	...	10 000
Upper Burma	57,300	...	800
Bengal	...	185,000	45,000
North-Western Provinces and Oudh .	1,100,000	...	...
Punjab	...	23,100	32,800
Madras	...	32 500	7,500
Bombay	189,900	61,100	..
	1,552,200	301,700	96,100

-97.
r Increases of nditure in t.

116. In addition to the direct expenditure on Famine Relief, the scarcity has unavoidably caused increases under a large number of the ordinary heads: Government servants on low pay have had to receive compensation for the dearness of food, and the rise in prices has increased the cost of supplies purchased by various Departments. But when it was seen in October last that a large famine expenditure would be necessary, orders were issued to restrict as much as possible all ordinary expenditure. The result has been that, notwithstanding the increased expenditure caused by the rise in prices under nearly all the ordinary heads of Expenditure, there have been savings from the Budget Estimates. The only heads under which there will be excesses of importance over the Budget Estimates are—

	Rx.
Jails	99,100
Interest on Debt	100,400
Major Irrigation Works: Working Expenses . . .	55,400

Expenditure

117. The increase in Jail expenditure is due entirely to the great cost of rations for the prison population. In Burma the expenditure this year is increased, to the relief of next year, by the purchase of considerable stocks of provisions in anticipation of a further rise in prices.

st Charges.

118. Of the excess under Interest, the fact that the Railway Capital Expenditure has not been so high as expected in March last, and that consequently the transfer from Ordinary to Railway Interest is reduced, accounts for Rx. 61,700. The remainder is due to the excess interest payments in connection with the conversion of the 3½ per cent loan of 1893-94 to 3 per cent, and to the payments of arrears of interest on expired loans having been greater than expected.

ion iture.

119. The excess in the Working Expenses of Major Irrigation Works has been caused by the necessity of repairing damages caused by floods to the Kistna, the Godavery and Cauvery Delta systems and the Srivaikuntam Anicut system in Madras at a cost of Rx. 29,000, and of repairs costing Rx. 22,300, to the Western Jumna, Bari Doab, and Sidnai Canals in the Punjab rendered necessary by increased irrigation

120. The important decreases of expenditure in India are— *1896-97. Decreases of Expenditure in India.*

	Rx.
Land Revenue	81,600
Opium	90,000
Forest	50,300
Interest on Other Obligations	51,400
Education	87,200
State Railways	185,800
Guaranteed Railways—Surplus Profits, etc.	145,000
Military Works	93,300
Army	274,400

121. The Punjab is the only Province in which the Land Revenue expenditure will exceed the Budget Estimate: the excess is Rx. 12,200, and is due to payment of compensation for dearness of provision, to additional expenditure on the survey and demarcation of holdings irrigated by the new Chenab Canal, and to the savings usually secured in the salaries of the officers present on duty in the Province in connection with leave having been somewhat overestimated in the Budget Estimates. *Land Revenue Expenditure.*

In all other Provinces there are considerable savings from the Budget Estimates. The Provincial Governments usually make more liberal provision than is found to be necessary.

122. The Local Governments usually estimate for a larger expenditure on Forests than is required. *Forest Expenditure.*

123. In paragraph 122 of the Financial Statement for 1896-97 it was explained that the estimate of Opium expenditure was taken somewhat lower than usual in consequence of the information as to the crop then in the ground. The crop proved to be still smaller, and the payments to cultivators for opium will accordingly be less by Rx. 90,000. *Opium Expenditure.*

124. The decrease in the Interest on Other Obligations is due to the payment in 1895-96 of interest payable in 1896-97 mentioned in paragraph 97, in consequence of which there will be no payment this year. *Interest on Other Obligations.*

125. The decrease under Education is due to the Local Governments having, as usual, made more liberal provision in the Budget Estimates than was required. *Education Expenditure.*

126. The working expenses of State Railways were reduced by the falling-off in traffic, which caused the larger loss in receipts. *Railway Expenditure.*

127. The decrease in the payments of Surplus Profits to Guaranteed Railways is a consequence of the decrease in the earnings of the Railways. *Surplus Profits.*

128. The Military Works Department was unable to spend the whole of the grant placed at its disposal. *Military Works Expenditure.*

129. Under the head Army the rise in the price of food for men and animals is expected to cause in the current year an excess over the Budget Estimate of Rx. 196,000: and the higher strength of the army, officers and men an excess of Rx. 46,000. On the other hand, the rise in the rate of exchange has caused a saving of Rx. 80,800 in Exchange Compensation Allowance, and of Rx. 24,000 in the cost of Australian remounts: the expenditure on mobilisation arrangements will be less than the Estimate by Rx. 120,000, about half of which is due to the expenditure being incurred in England, so that the provision in the India Estimates was unnecessary, and the other half to its having been found impossible to carry out the intended work; and savings under ordinary expenditure to the extent of Rx. 291,600 have been secured,—in some cases by postponing expenditure which it was intended to incur, but in most simply because the Budget Grants had been fixed on a more liberal scale than was required. *Army Expenditure.*

130. One cause of saving which affects almost all the Expenditure heads in India is the rise in the rate of exchange above that assumed for the calculation of the cost of Exchange Compensation Allowances. The average rate taken for this purpose in the Budget Estimate was $13\frac{3}{4}d.$ the rupee: the four *Exchange Compensation Allowances.*

quarterly rates with reference to which the Exchange Compensation Allowances have been paid are $14\frac{7}{32}d.$, $14\frac{3}{32}d.$, $14\frac{5}{32}d.$, and $14\frac{25}{32}d.$, yielding an average for the whole year of $14\frac{5}{16}d.$ The consequent saving amounts to Rx. 207,700.

1896-97. Revenue in England.

131. The Sterling Receipts are expected to exceed the Budget Estimate by £145,300. The three important items composing this increase are: the premium of £68,900 realised on the issue of $2\frac{1}{2}$ per cent India Stock; £27,500 interest on temporary investments of the cash balance, the rates of interest realised being higher; and £34,100 under Army Receipts mainly in connection with the Indian Troop Service.

1896-97. Expenditure in England

132. The Sterling Expenditure is expected to be less than the Budget Estimate by £28,800. There is a saving of £137,500 under Army (of which £40,600 is a transfer to the head Special Defences and the remainder occurs chiefly under Stores and Troop Service) and of £25,600 under Interest (the Secretary of State having made good progress with the sale of Council Bills in the early part of the year was able to postpone the replacement of £1,000,000 India Bills discharged in May and to refrain from temporary borrowing from the Bank of England). These savings were largely counterbalanced by a number of excesses under other heads.

1896-97. Exchange.

133. The charge for Exchange on net Sterling Expenditure is less than in the Budget Estimate by Rx. 1,459,500. The net Sterling Expenditure is less by £174,100, and the exchange on this difference at $13\frac{3}{4}d.$ the rupee, the rate of the Budget Estimate, is Rx. 129,800 which is the saving in exchange due to the decrease in the sterling payments. The direct saving in exchange on sterling transactions from the rise in the rate of exchange from $13\frac{3}{4}d.$ to 14·46*d.* the rupee is therefore Rx. 1,329,700.

Section III.—Budget Estimate of 1897-98.

1897-98. Statement of the gross figures.

134. The following is a general comparison of the Budget Estimates of 1897-98 with those of 1896-97:—

		1896-97.	1897-98.	1897-98, better.	1897-98, worse.
REVENUE.					
India	Rx.	97,316,800	95,389,600	...	1,927,200
England	£	174,100	173,000	...	1,100
Exchange	Rx.	129,800	114,200	...	15,600
TOTAL	Rx.	97,620,700	95,676,800	...	1,943,900
EXPENDITURE.					
India—					
Imperial, Provincial, and Local	Rx.	70,274,000	72,623,000	...	2,349,000
Adjustment of Provincial and Local Surplus or Deficit	Rx.	−806,400	−1,190,000	383,600	...
NET	Rx.	69,383,500	71,433,000	...	2,045,400
England	£	15,009,400	16,088,500	...	179,100
Exchange	Rx.	11,850,700	10,618,400	1,241,300	...
TOTAL	Rx.	97,157,600	98,140,800	...	983,200
SURPLUS	Rx.	+463,100	−2,464,000	...	2,927,100

1897-98. Main features.

135. The famine continues in 1897-98 also to exert its malignant influence and to dominate the finances of India.

The expenditure on Famine Relief will be higher than in 1896-97: the loss of Land Revenue and of Railway Revenue, though diminished, will still be considerable; the revenue under some other heads will be diminished, and the expenditure under many ordinary heads will be increased, as indirect results of the scarcity.

The present low price of Bengal Opium and the stagnation of the export trade in Malwa Opium involve a heavy loss of Opium Revenue.

On the other hand, the rise in the rate of exchange secures a large saving, and there is a considerable reduction in Military expenditure.

The final result is a deficit of nearly two-and-a-half crores of rupees.

1897-98. Decreases of Revenue in India.

136. The Governments of the North-Western Provinces and Oudh, the Central Provinces, the Punjab, and Burma all consider that remissions or suspensions of Land Revenue will be necessary next year because of the famine, and the Estimates are less than the Budget Estimates of 1896-97 by the following amounts:—

Land Revenue and Provincial Rates

	Land Revenue, including that due to Irrigation.	Provincial Rates.
	Rx.	Rx.
North-Western Provinces and Oudh . .	186,400	32,600
Central Provinces	264,600	...
Upper Burma	169,600	...
Punjab	95,200	17,700

In the other Provinces increases are expected to accrue in ordinary course, and will counterbalance to some extent the above losses: the net reduction in Land Revenue, including that due to Irrigation, is Rx. 436,500, and in Provincial Rates Rx. 48,100.

Railway Revenue

137. As the effects of the famine and plague on Railway traffic are expected to continue next year, though not to so damaging an extent as this year, the Railway Receipts are taken lower than in the Budget Estimate for 1896-97 by—

	Rx.
State Railways—Gross Receipts	98,300
Guaranteed Railways—Net Receipts	603,000

Excise Revenue.

138. The Excise Revenue is taken at an amount less by Rx. 65,600 than the Budget Estimate of 1896-97. The reductions are—

	Rx.
Central Provinces	83,800
North-Western Provinces and Oudh	65,000
Bombay	60,000
Punjab	700

They are all attributable to the famine, or in Bombay to the famine and plague combined. Other Provinces estimate for the usual increases in Excise Revenue, that is to say, as a rule, estimate that the Revenue next year will be at least as high as the Revised Estimate of this year, and the increases in other Provinces (the highest being in Madras of Rx. 85,000) counterbalance a very large part of the loss above shown.

Opium Revenue.

139. The only other head of Revenue in India under which there is an important decrease is Opium; and there the loss is very heavy, amounting to Rx. 1,079,100, as compared with the Budget Estimate of 1896-97.

The price of Bengal Opium was taken at R1,300 a chest last March: the prices have since declined heavily, and we cannot assume that we shall receive so high a price next year. The average price at the sale of this month was R1,071 a chest, and the price for the Budget Estimate has been taken at that amount approximately, namely, R1,075 a chest. This lower price results in a loss of Rx. 877,500.

As explained in paragraph 105 above, the export trade in Malwa Opium is in a very depressed condition, and until there are clear signs of a revival, we are not justified in estimating for so high a revenue from the export duty as we did last March. The rate of duty was also reduced in July last by R50 a chest. The Bombay receipts have accordingly been taken Rx. 190,400 lower than last year.

1897-98. Increases of Revenue in India

140. The increases of revenue which it has been found possible to include in the Budget Estimate for next year are few. The only ones of importance are—

	Rx.
Irrigation—Direct Receipts	224,400
Stamps	103,800
Post Office	56,600

Irrigation Revenue

141. The increase in Irrigation revenue occurs in the Punjab Rx. 112,900, the North-Western Provinces and Oudh Rx. 99,700, and Bengal Rx. 15,000. A large part of the increase secured in Bengal this year (see paragraph 109 above) is expected to be continued. The opening up of new channels from the Chenab Canal will secure new revenue, and the conditions of the season warrant us in expecting a high revenue generally in the Punjab and the North-Western Provinces and Oudh, though not so high as in the currrent year.

Stamp Revenue

142. The increase under Stamps occurs in Bengal Rx. 64,500, and in the Punjab Rx. 35,000. The Stamp revenue has improved very much in those two Provinces in the current year, and it is assumed that the improvement will be maintained next year. In Bombay owing to the plague, and in the North-Western Provinces and Oudh probably because of the famine, the Stamp revenue this year has declined considerably—by Rx. 34,000 in the former and Rx. 22,000 in the latter—, but it is hoped that the decrease may be made good next year.

Post Office Receipts.

143. The increase in Post Office receipts represents the normal annual increase in revenue.

1897-98. Increases of Expenditure in India.

Famine Relief

144. The expenditure on Famine Relief entered in the Budget Estimates of 1897-98 amounts to the very large sum of Rx. 3,641,200. The amounts for the several Provinces are—

	Rx.
North-Western Provinces and Oudh	850,000
Bengal	1,004,800
Central Provinces	680,000
Bombay	670,300
Punjab	167,800
Madras	200,400
Upper Burma	66,600
TOTAL	3,639,900

These are the sums estimated as likely to be required by the several Local Governments, and as the Government of India are unwilling to take any step which would have even the appearance of putting any check on expenditure on this object other than the recognised checks prescribed in the Famine Codes, the estimates of the Local Governments have been accepted. The difficulty of any accurate forecast is very great, and experience alone can show whether the estimates are excessive or insufficient. We have good hope that the expenditure may be considerably less, if the monsoon is favourable.

In addition to the amounts above stated, there is an expenditure of Rx. 1,300 for the supervision of relief operations in Native States.

145. The following table gives for 1897-98 the information regarding the distribution of the expenditure on Famine Relief between Imperial, Provincial, and Local, which is given for 1896-97 in paragraph 115 above:— *Distribution of famine relief expenditure in 1897-98*

	Imperial. Rx.	Provincial. Rx.	Local. Rx.
Central Provinces	677,900	...	2,100
Upper Burma	...	65,100	1,500
Bengal	701,300	221,800	81,700
North-Western Provinces and Oudh	850,000	...	...
Punjab	126,000	...	41,800
Madras	19,300	131,100	50,000
Bombay	570,300	...	100,000
	2,944,800	418,000	277,100

146. The other heads under which the Budget Estimates for Expenditure in India of 1897-98 exceed those of 1896-97 by important amounts are— *1897-98. Other Increases of Expenditure in India.*

	Rx.
Opium	60,100
Post Office	78,400
Jails	68,400
Police	70,500
Railway and Irrigation Interest	202,800
Land for Subsidised Railway Companies	128,000

147. In March last we had information that the yield of the poppy crop then in the ground was likely to be below the normal, and we therefore reduced the provision in the Budget Estimate for 1896-97 under Opium slightly below the amount required to pay for an average yield. This year the reports of the crop are not unfavourable, and we have therefore provided the sum required to pay for the normal amount of 100,000 maunds of opium. *Opium Expenditure.*

148. The increase under Post Office is rather higher than the normal annual increase of expenditure of the Department. *Post Office Expenditure.*

149. The increase under Jails is distributed over all the Provinces except Burma (where there is a large decrease of Rx. 19,200 for the reason explained in paragraph 117), Bengal, and Assam, and is due to the high price of rations and to the fear that the famine may have the effect of adding to the Jail population: it is quite possible that it may be found that too great allowance has been made for these two causes, and that the expenditure may be considerably lower than the Estimate. *Jail Expenditure.*

150. The increase under Police occurs mainly in the following Provinces:— *Police Expenditure*

	Rx
Bombay	20,300
North-Western Provinces and Oudh	31,400
Bengal	12,800

The cost of compensation for dearness of provisions accounts for much of these increases: it may prove to have been overestimated. Schemes of improvement in the organisation of the Police costing money are in progress in several Provinces, and the expenditure involved cannot be altogether stopped even in a year of straitened means like the present.

151. The increase under Railway and Irrigation Interest is the interest on the new Capital Expenditure. *Railway and Irrigation Interest.*

152. The increase under Subsidised Railways is caused by the rapidly increasing number of new branch lines and extensions of Railways belonging to Companies, all of which receive the Railway land from the Government free of cost. The more important payments for land in 1897-98 are— *Subsidised Railways.*

	Rx.
Mymensingh-Jamalpur Railway	11,500
South Behar Railway	20,000
Brahmaputra-Sultanpore Railway	30,000
Bhagulpur Bausi-Baidyanath Railway	52,500
Branches of the Bengal and North-Western Railway	70,000
Tinnevelly Quilon Railway	15,000
Tapti Valley Railway	17,200

1897-98. Decreases of Expenditure in India.

153. Under the following heads the expenditure in India is expected to be less than in the Budget Estimates of 1896-97 :—

	Rx.
Interest	31,600
Marine	52,200
Guaranteed Railways—Surplus Profits, Land, etc.	322,500
Minor Irrigation Works	161,700
Civil Works	359,600
Army	511,200
Special Defences	49,100

Interest Charges.

154. The reduction in the Interest charge is caused by the transfer to Railway and Irrigation Interest, Rx. 202,800 (see paragraph 151 above), and by the conversion of the bulk of the $3\frac{1}{2}$ per cent loan of 1893-94 to 3 per cent and the discharge of the remainder, Rx 52,400, counterbalanced by the interest at 3 per cent on the public loan of Rx. 4,000,000 and on the special loan for the currency investment of Rx. 2,048,700 raised this year. The Estimate includes provision for the interest for part of the year on the new loan of Rx. 4,000,000 which is to be raised in the year.

Marine Expenditure.

155. The reduction in Marine expenditure occurs mainly as under :—

	Rx.
Royal Indian Marine	16,100
Lower Burma Marine Department	21,700
Upper „ „ „	10,000

In the Royal Indian Marine the loss of the *Warren Hastings* will cause some increase of expenditure, as the hire of transport will cost more than the savings in the salaries and victualling charges of establishments afloat. This increase is, however, more than counterbalanced by reductions in the purchase of marine stores and coal: a larger part of the expenditure on those purchases is taken as recoverable from other Departments on the basis of past actuals, and the supplies for the repair of Her Majesty's ships in the Persian Gulf are for the future to be deducted from expenditure instead of being treated as receipts.

In Lower Burma, the heavy expenditure of 1896-97 was required for the construction of new light ships and lights, and is not necessary next year.

In Upper Burma, two steamers, the *Tamma* and the *Patrick* have been reduced.

Guaranteed Railways.

156. Under the head Guaranteed Railways—Surplus Profits, Land, etc., there is a reduction of Rx. 431,800 in the payments to the three old Guaranteed Railway Companies on account of their moiety of surplus profits: the decline in the traffic reduces the surplus profits, and on the Bombay, Baroda and Central India Railway the profits will be further reduced by heavy outlay on the renewal of girders. On the other hand, the provision of land for branches of the Companies' Railways will involve the following outlay in 1897-98 :—

	Rx.
Calicut-Cannanore Railway	98,600
Amalner-Jalgaon Railway and Chalisgaon-Dhulia Railway	20,000

Minor Irrigation Expenditure.

157. The decrease in the expenditure on Minor Irrigation Works occurs chiefly in Madras Rx. 96,900: some large irrigation projects have been completed in Madras, and work has not yet been begun on the new schemes in contemplation in the future. In Bengal, Lower Burma, and Bombay also, the expenditure will be decreased by Rx. 27,400, Rx. 19,000, and Rx. 14,800.

Civil Works Expenditure.

158. The reduction under Civil Works is due to the fact that the large Famine outlay and the reduction of Provincial balances necessitate the postponement of all expenditure which it is possible to postpone, both Imperial and Provincial.

159. In accounting for the decrease under Army Expenditure in India the first item to be mentioned is the large one of Rx. 394,000, being the initial expenditure on the completion of mobilisation arrangements which was specially provided this year. The provision for expeditions and special services is less by Rx. 61,600 than that in the Budget Estimate of 1896-97. There are reductions of Rx. 130,700 in Exchange Compensation Allowance, Rx. 195,300 in the pay of the British Troops, and Rx. 8,400 in the cost of Australian remounts, all due to the rise in the rate of exchange. Lastly, considerable reductions of the grants of the Commissariat, Clothing, and Ordnance Supply Departments have been enforced. *Army Expenditure*

On the other hand, the high prices caused by the scarcity have necessitated increased provision, to the extent of Rx. 399,300, for the cost of food for men and animals and for compensation for dearness of provisions. We hope that this, like other provisions of a similar kind under other heads, may prove to be excessive.

160. As explained in paragraph 162 of the Financial Statement of March last, the expenditure on Special Defences has now been practically completed. Any expenditure of this nature in India which may be required in future will be incurred from the grant for Military Works. *Special Defences*

161. The rate assumed in the Budget Estimate as the average rate, with reference to which Exchange Compensation Allowance will be paid, is 1*s.* 2$\frac{3}{4}$*d.* As the rate for this purpose in the Budget Estimate of 1896-97 was 1*s.* 1$\frac{3}{4}$*d.*, there is a considerable saving under most heads on this item of expenditure, amounting in all to Rx. 315,700. *1897-98. Exchange Compensation Allowances.*

162. The estimate of sterling receipts in England does not differ appreciably from that for 1896-97. *1897-98. Revenue in England.*

163. The sterling expenditure will exceed the amount taken in the Budget Estimates of 1896-97 by £179,100. *1897-98. Expenditure in England.*

The heavy expenditure on the construction of Railways and on Famine Relief has seriously diminished the amount of money available in India to meet the drawings of the Secretary of State: it has therefore become necessary to reduce the sales of Council Bills from £16,500,000 to £13,000,000, and for the Secretary of State, in order that he may be able to meet his disbursements, to borrow £3,500,000 in London, in addition to replacing the India Bills for £1,000,000 which he was able to discharge without replacement this year. The sterling interest payments are consequently increased by £61,400. There is an increase of £45,000 in the purchase of stores for the Telegraph Department: it was mentioned in paragraph 124 of the Financial Statement of March last that the stock of stores requires replenishing. There is an increase of £100,500 in the charge for interest on Capital deposited by Railway Companies: the programme of Railway construction sanctioned by the Secretary of State, in addition to the direct borrowing of £3,500,000 by him, necessitates the raising of guaranteed loans by Railway Companies to the extent of £2,050,000, and the interest on them has to be met and charged in the Railway Revenue Account. Under Army, the payments to the War Office are in excess of the Budget Estimate of 1896-97 by £30,000 for Effective Services, and £21,500 for Non-Effective Service: the other Non-Effective Sterling charges are in excess by £44,100; but, on the other hand, the other Effective charges are less by £150,700, the larger part of the reduction being under Stores.

164. In 1897-98 the charge for Exchange on the net Sterling Expenditure is less than in the Budget Estimate of 1896-97 by Rx. 1,225,700. The net Sterling Expenditure is more than in the Estimate of 1896-97 by £180,200, and the exchange on this difference at 13$\frac{3}{4}$*d.* the rupee is Rx. 134,300. The direct saving from the rise in the rate of exchange from 13$\frac{3}{4}$*d.* to 14·46*d.* the rupee is therefore Rx. 1,360,000. *1897-98. Exchange.*

Section IV.—Examination of the Estimates under the more important heads of Revenue and Expenditure.

LAND REVENUE.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.

District Administration	1,836,660	1,843,700	1,873,709	1,900,200	1,875,000	1,898,700
Other Charges	2,184,953	2,202,372	2,221,348	2,275,600	2,218,800	2,268,000
TOTAL	4,021,613	4,048,132	4,097,117	4,175,800	4,093,800	4,166,700

165. The above figures of Revenue reveal with vivid distinctness the effects of the famine. In paragraph 138 of the last Financial Statement the fact was noticed that the progress of Land Revenue had received a check in consequence of the failure of the cold-weather rains in Northern India. The failure of the monsoon of 1896 has now caused wholesale retrogression, and the total Land Revenue this year is reduced to an amount lower than any year since 1891-92. A partial recovery is hoped for next year, but we cannot expect to collect a Land Revenue of the full present normal standard until another year has passed. The amounts of the loss of Land Revenue in each Province are stated in paragraphs 103 and 136.

OPIUM.

166. Falling prices for Bengal Opium and a languishing export trade in Malwa Opium account for the diminished Opium Revenue shown above. What the reasons for those conditions are we do not venture to say with any confidence, but what information we have leads us to fear that increased production of Opium in China and more successful competition of the Chinese with the Indian drug are mainly responsible. Detailed explanations regarding Revenue will be found in paragraphs 105 and 139, and regarding Expenditure in paragraphs 123 and 147.

SALT.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Northern India (*a*)	1,838,656	1,894,320	1,905,325	1,930,000	1,900,000	1,947,800
Burma (*b*)	167,590	118,989	156,032	105,000	140,800	150,000
Bengal (*b*)	2,374,133	2,458,219	2,488,620	2,470,000	2,477,500	2,505,400
Madras (*a*)	1,620,776	1,795,354	1,997,480	1,820,000	1,709,900	1,840,200

Charges	474,405	498,415	521,044	566,900	529,100	570,200

(*a*) Chiefly excise on local manufacture. | (*b*) Chiefly duty on imported salt.

167. The failure of Revenue this year may be ascribed, except in Burma and Madras, to the scarcity and the plague (see paragraph 106). Next year a recovery is expected, and there will also be an increase of about Rx. 50,000 from the enhancement of the duty on Kohat Salt from 8 annas to R2-8 a Lahoti

maund. That increase was ordered from the 15th of July last, the main object being to enable the Government to abolish—it is hoped at an early date—the troublesome Indus protective line, the maintenance of which is necessary so long as there is a material difference in the rates of duty on Cis-Indus and Trans-Indus Salt. The measure has produced no increase of Revenue this year, because ample notice was intentionally given of the change and very considerable clearances were effected before the enhancement took effect; but those stocks must now be nearing exhaustion, and an increase of Revenue will certainly be realised next year.

The saving in Expenditure in 1896-97 occurs chiefly in Madras Rx. 26,400: the Madras Government usually overestimates the amount required for expenditure under this head. The charges of the Northern India Salt Department are also less than the Budget Estimate by Rx. 8,000, the manufacturing charges at Sambhar having been lower than expected. In Bengal Rx. 5,000 was provided for a preventive establishment in the salt-bearing districts other than Orissa, but the measure is not yet matured. A provision of Rx. 20,000 is made for the same purpose in 1897-98. After long and careful inquiry the Government of Bengal has been convinced that extensive illicit dealings in Salt are prevalent in some of the coast districts, and it is hoped that a scheme to protect this important branch of the Revenue in Bengal may be matured and sanctioned in time to be brought into operation in 1897-98.

Rice	663,026	906,538	930,616	838,700	758,000	800,000
Land Customs and Miscellaneous	31,512	50,878	51,943	50,300	50,700	50,400
GRAND TOTAL	1,682,373	3,854,955	5,017,278	4,481,000	4,516,700	4,491,900
Charges	143,736	174,547	202,048	207,300	202,000	210,700

171. The two important variations under this head are the continued high imports of silver and the falling-off in the exports of rice which has been largely diverted to India in consequence of the scarcity. The other heads will realise this year fairly closely the amounts estimated last March. For next year the imports of silver are taken lower than the actuals of the last three years, as it is not yet considered safe to estimate that these represent the normal annual imports,

and the rice exports are taken about Rx. 50,000 higher than in the Revised Estimate for 1896-97. The duties on cotton goods are also taken approximately at the same amount as in 1896-97: it is quite possible that one effect of the scarcity and distress in India may be to cause a considerable reduction in the imports of cotton goods, but it is not considered necessary to assume this for the estimate, especially as the estimate as a whole is moderate and cautious.

ASSESSED TAXES.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Deduction by Government from Salaries, Pensions, and Interest payments	435,138	450,557	447,688	456,000	442,400	445,000
Other Collections	1,304,033	1,348,503	1,387,501	1,387,200	1,413,100	1,405,300
TOTAL	1,739,171	1,808,060	1,835,189	1,843,200	1,855,500	1,850,300
Charges	31,060	29,771	29,868	31,400	30,300	32,700

172. This Revenue also has suffered from the famine and plague. In Bombay the receipts are expected to fall short of the Budget Estimate of 1896-97 by Rx. 12,700 this year and Rx. 30,200 next year; in the North-Western Provinces and Oudh, by Rx. 7,500 and Rx. 5,000; and in the Punjab, by Rx. 2,000 this year. The other Provinces show moderate progress.

FOREST.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Revenue	1,723,022	1,631,548	1,660,504	1,732,300	1,768,500	1,756,200
Expenditure	906,407	913,449	911,161	1,045,800	999,900	1,076,100
NET	816,615	718,099	749,343	686,500	768,600	680,100

173. This is another head which is suffering from the effects of the famine and from measures taken to relieve the famine-stricken population. The Revenue this year will fall short of the Budget Estimate by Rx. 34,700 in Bombay, Rx. 35,800 in the Central Provinces, and Rx. 16,700 in the North-Western Provinces and Oudh. On the other hand, there are increases of Rx. 74,500 in Burma, Rx. 32,600 in Madras, and Rx. 12,600 in the Punjab. The results for next year are slightly better, and similar in distribution to those for this, except that the very high Revenue in Burma is not assumed to be likely to recur.

INTEREST RECEIPTS.

175. The figures for 1896-97 have been explained in paragraphs 118, 124, and 132. The heavy borrowing to which it has been necessary to resort both in India and in England explains the increase of the total charges for Interest on Debt: that involves a permanent annual addition to the expenditure. The distribution of the total between Ordinary and Public Works Debt is explained in paragraphs 118 and 154.

176. The Post Office receipts continue to increase satisfactorily. But both this year and next the increase of expenditure is specially heavy: this is due to the famine, the high prices necessitating payment of compensation for dearness of provisions to postal servants on low pay and larger expenditure on the feed of ponies and bullocks employed on the Passenger and Bullock Train Services.

177. The progress of Telegraph receipts has undergone a temporary check. The traffic has not been brisk this year: both this year and next there is a loss of revenue owing to its having been deemed right to reduce the rent charged to Railways for the use of wires and instruments; and next year it is expected that certain arrangements which are in contemplation for the quicker delivery of messages classed as "deferred" may reduce the receipts by causing a larger use of "deferred" instead of "ordinary" messages.

178. The figures of Telegraph expenditure on Revenue Account are normal. The large increase of Telegraph Capital Expenditure is necessitated by the rapid rate of the construction of Railways, as Telegraph lines must be constructed on all new Railways.

179. The increase in the Mint receipts in 1896-97 has been explained in paragraph 110; the expenditure is slightly increased by the large amount of work in the coinage of copper and small silver: the receipts under Gain on copper coinage will be higher than usual next year also, as the demand for copper will continue until it is possible to close the Famine Relief Works: this gain is taken at Rx. 50,000 in the Budget Estimate of 1897-98 as compared with Rx. 122,000 this year.

CIVIL DEPARTMENTS.

		Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.

TOTAL Rx.		14,637,840	14,835,209	15,172,860	15,399,500	15,383,300	15,467,800

(a) Includes Upper Burma charges up to 1896-97.

180. The rise in the rate of exchange will diminish the expenditure under most of these heads by reducing the charges for Exchange Compensation Allowance and for exchange on sterling transactions. On the other hand, the charges under nearly all of them are increased by the rise of prices caused by the scarcity.

181. It will be noticed that, with the exception of Jails and Police, the increase of expenditure under the several heads is at a much lower rate than the usual annual increase: indeed, excluding those two heads (and on the other side the Exchange on sterling expenditure), the total expenditure is less than the Budget Estimate of 1896-97. The severe strain thrown on the Revenues, both Imperial and Provincial, by the famine has rendered necessary the exercise of rigid economy wherever economy is possible.

182. The expenditure on Jails is specially high both this year and next: the rise in prices, besides causing expenditure on compensations for dearness of provisions, as under the other heads of the group, increases the cost of the prisoners' rations. Under Police the expenditure on compensation for dearness of provisions is higher than under any other head; and it is also necessary to continue the progress already begun in costly schemes of improvement in Police administration.

MISCELLANEOUS CIVIL CHARGES.

183. The characteristics of the expenditure under this group continue the same as explained in previous Financial Statements.

FAMINE RELIEF AND INSURANCE.

	Accounts, 1893-94	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Famine Relief	496	10,258	18,301	75,000	1,905,700	3,041,200
Construction of Protective Railways	1,060,954	556,867	529,867	473,500	...	...
Ditto ditto Irrigation Works	56,351	43,110	38,317	50,000	47,200	25,000
TOTAL	1,117,801	610,235	586,485	598,500	2,012,900	3,066,200
Net Charge on account of the Bengal-Nagpur and the Indian Midland Railways shown in the Railway Revenue Account	371,768	389,765	413,515	401,500	435,600	456,500
TOTAL EXPENDITURE CHARGEABLE TO THE FAMINE GRANT	1,489,569	1,000,000	1,000,000	1,000,000	2,448,500	4,122,700

184. This expenditure is the main feature of the finances of both years, and has been so fully discussed in preceding paragraphs of this Statement that it is unnecessary to add anything here, except to notice that as the direct charges for Famine Relief largely exceed the limit fixed in normal years for the Famine Insurance Grant, it has been necessary to remove the charges for the construction of Protective Railways from the head: the expenditure on them, however, is being continued, the charges being shown under Head 48 of Expenditure not charged to Revenue, a course which is permissible as the Railways are expected to yield a return of 4 per cent when completed.

185. The variations in the Estimates of the Receipts, Working Expenses, Interest, and Surplus Profits and other charges in India have been explained in paragraphs 104, 118, 126, 127, 137, 151, and 156. The increase in the sterling interest charge of State Railways occurs on the Capital deposited by Companies, and is due to the fact that borrowing through Companies is necessary in order to carry out the programme of Railway Construction which has been sanctioned. The rise in the rate of exchange causes a large saving in the Exchange on the sterling charges, and this makes the figures in the line for Net Result in the above table appear much more favourable than they in a sense really are.

As already explained, the poorness of the results of the Railway Revenue Account may be entirely ascribed to the scarcity and the plague. As soon as the clouds of famine and plague disperse, the Railway Revenue may be expected to advance very rapidly.

IRRIGATION.

IRRIGATION.	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.

186. It has been explained in paragraphs 109 and 141 above that the increases in the receipts from Major Works are due mainly to the failure of the rains : the same is true of the smaller increases in the receipts from Minor Works.

In 1897-98, notwithstanding the need for economy in view of the general position, it is not possible to avoid some increase in the Working Expenses of Major Works, as new works are being constructed from borrowed money every year, and these must be maintained; but a considerable reduction has been effected in the expenditure on Minor Works.

187. The financial results obtained during 1894-95 and 1895-96 from Irrigation Works for which capital and revenue accounts are kept are given below :—

	1894-95.	1895-96.
MAJOR WORKS.	Rx.	Rx.
Capital Outlay—		
Direct and Indirect . . During the year . .	695,032	788,997

Receipts	276,546	276,984	292,671	280,900	294,000	293,500

188. Regarding Military Works reference may be made to paragraph 128.

189. Under Civil Works the expenditure in 1896-97 on Imperial and Provincial Works has been kept below the Budget Estimates. But the Local expenditure shows a considerable excess in Madras (Rx. 41,100), Bengal (Rx. 42,200), and Bombay (Rx. 37,400).

In 1897-98 the Upper Burma expenditure (Rx. 275,000) is transferred from Imperial to Provincial, as that Province will now be included with Lower Burma in a Provincial Settlement. Allowance being made for that change, it will be seen that large reductions of grants have been enforced both under Imperial and Provincial. The Local expenditure, though higher than the Budget Estimate of 1896-97, is lower than the Revised Estimate.

190. It is not necessary to add anything to the remarks on this head contained in paragraphs 129, 132, 159, and 163.

SPECIAL DEFENCE WORKS.

191. The following table shows the expenditure on "Special Defence Works":—

	Rx.
To end of 1886-87	150,409
1886-87	325,626
1887-88	456,017
1888-89	789,595
1889 90	689,481
1890-91	491,837
1891-92	604,848
1892-93	458,060
1893-94	324,974
1894-95	217,867
1895-96	101,349
1896-97, Budget Estimate Rx. 57,500; Revised Estimate	123,500
1897-98, Budget „	19,400
	4,752,963

192. This head will now be closed so far as Expenditure in India is concerned: but the outlay on armaments for the Defence Works incurred in England will still be charged to it.

Section V.—Capital Expenditure on Public Works not charged against Revenue.

193. As explained in paragraph 163 of the Financial Statement of March 1896, the programme of Capital Expenditure during 1896-97 was fixed at Rx. 6,730,200 made up of—

	Rx.
Railways	5,980,200
Irrigation	750,000

Of the Railway grant, Rx. 473,500 was shown against the Famine grant as expenditure on Protective Railways.

During the course of the year the Secretary of State, in dealing with the question of the manner in which funds should be provided for the construction and development of Railways in the hands of Companies, expressed his willingness to agree to the expenditure of a sum of about 27 crores of rupees upon the extension of Indian Railways during the years 1896-97, 1897-98, and 1898-99. The Government of India thereupon drew up a forecast of the expenditure they proposed to incur during these years, and explained that, in view of the works already sanctioned and commenced during 1896-97, they found some difficulty in placing the total at a lower figure than 28 crores, or including the branches of the old Guaranteed Lines 29·66 crores of rupees. This programme, which has been accepted by the Secretary of State, provided for expenditure as follows:—

	Rx.	Rx.
1896-97	10,174,700	
1897-98	10,130,000	
1898-99	7,695,300	
Total	...	28,000,000
Add—for Guaranteed Railway Extensions	...	1,665,000
GRAND TOTAL	...	29,665,000

This expenditure was to be provided thus :—

	1896-97. Rx.	1897-98. Rx.	1898-99. Rx.
From Imperial funds . . .	5,980,200	6,420,000	5,405,300
Capital of Indian Railway Companies	4,194,500	3,710,000	2,290,000

and was to be expended—

By State Agency	3,629,000	3,320,000	2,705,300
By the Agency of Companies . .	6,545,700	6,810,000	4,990,000

The expenditure by the Guaranteed Companies was not set down against any particular year, and it is now estimated that very little outlay will be incurred on these branch lines until 1898-99. The whole of the Rx. 1,665,000 may therefore be taken in that year.

In addition to this, it was anticipated that expenditure would be incurred by the Agency of Branch Line Companies and Companies outside the accounts of the Government of India, which brought the total programme for 1896-97 up to a figure in excess of 12 crores of rupees.

The grant of Rx. 5,980,200 for expenditure from Imperial funds was modified during the year by the transfer of the Burma Railways to a Company, with effect from September 1, 1896, the balance of the expenditure of the year from that date, estimated at Rx. 585,400, being met from the Company's Capital.

The Assam-Bengal Railway Company and the East Indian Railway Company were unable to spend their grants, and the Bengal and North-Western Railway Company failed also to spend the amount provided for the extensions of the Tirhoot State Railway. The short expenditure amounted to Rx. 830,400. It was arranged that the expenditure on the East Indian Railway should be charged to Head 48, that head being credited with the amount of debentures raised by the Company; in consequence of the Company having raised Rx. 757,000 more than they spent, the short outlay under 48 was further increased to Rx. 1,587,400, and the Revised Estimate has been taken at Rx. 3,819,900 for Railways and Rx. 737,500 for Irrigation Works.

As regards the expenditure to be met from Companies' capital, which was estimated at Rx. 4,194,500 (including Rx. 737,800 for the East Indian Railway which has since been transferred to Imperial funds), the Indian Midland Railway Company and the Bengal-Nagpur Company failed to spend the grants provided for them, and the Revised Estimate has been taken at Rx. 3,501,400.

The total expenditure of the year, as compared with the Rx. 10,174,700 provided in the forecast, amounts to—

	Rx.
Imperial funds	5,256,900
Capital of Indian Railway Companies	3,501,400
TOTAL .	8,758,300

In addition to the above sum, the Branch Lines Companies and the other Companies whose accounts are not incorporated in the Government accounts, are expected to spend during the year Rx. 2,118,200, making a total of Rx. 11,228,500 for all Railways in India.

194. As regards 1897-98, the amount provided in the forecast is Rx. 10,130,000, of which Rx. 6,420,000 is to be provided from Imperial funds and Rx. 3,710,000 from Companies' capital. Allowing for the transfer of the Burma Railways to a Company and for the special treatment of the East Indian Railway

debentures, as well as for the provision for expenditure in England on the Assam-Bengal Railway, the Estimate for Capital Expenditure not charged to Revenue has been prepared for—

	Rx.
Railways	5,838,600
Irrigation	750,000
TOTAL	6,588,600

The expenditure on the East Indian Railway from debentures, amounting to Rx. 662,100, should be added to the above figure to give the total outlay on State Railways. In addition to the above, further capital expenditure, as noted below, will also be incurred next year on Railways:—

	Rx.
Capital Account of Indian Railway Companies including the extensions of the Bengal-Nagpur and Indian Midland Railways	3,629,300
Branch Line Companies—	
Ahmedabad-Parantij, Brahmaputra-Sultanpur, Mymensingh-Jamalpur, South Behar, and Tapti Valley Railways	1,609,800
Outside the Government Accounts—	
Bengal and North-Western Railway extensions	806,000
Southern Punjab	724,600
Segowlie-Rakhsal	55,000
Earsi	8,400
Nilgiri	80,000
TOTAL	6,913,100

The total of the programme for Capital Expenditure on Railways and Irrigation Works in 1897-98 accordingly exceeds 14 crores of rupees.

48.—STATE RAILWAYS—CONSTRUCTION.

195. The Budget grant for 1895-96 amounted to Rx. 3,700,000 as under:—

	Rx.
Amount provided under "Not charged to Revenue"	4,400,000
Deduct—Provision for Irrigation Works	700,000
Leaving for Railways under 48	3,700,000

196. The Revised Estimate provided for a total expenditure of Rx. 4,157,000 as under:—

	Rx.
Amount provided under "Not charged to Revenue"	4,327,200
Deduct—Provision for Irrigation Works	705,000
Leaving for Railways under 48	3,622,200
Provided under "34.—Construction of Protective Railways"	534,800
TOTAL	4,157,000

against which the actual expenditure incurred amounted to Rx. 3,917,094, thus falling short of the Revised Estimate by Rx. 239,906 and exceeding the Budget provision by Rx. 217,094. Of moneys placed at his disposal up to 30th November 1895 (date of despatch of indents from India), the Secretary of State was unable to spend £108,938, which sum, with exchange and charges upon it, amounted to Rx. 192,664.

197. The amounts provided for Railway Construction this year and next are, as explained above, Revised Estimate, 1896-97, Rx. 3,819,900, and Budget Estimate, 1897-98, Rx. 5,838,600, the distribution of which is as follows :—

	Revised Estimate, 1896-97. Rx.	Budget Estimate, 1897-98. Rx.
Expenditure by State Agency—

Remittances from India, net—			
(*a*) Railway Companies' Remittances	117,200	—194,300	500,500
(*b*) Family and other Remittances	194,400	43,700	228,000
Add—Closing Balance	2,463,824	2,814,698	2,271,298
TOTAL	27,651,624	26,536,698	25,810,498

200. In the Budget Estimate of 1896-97 the net disbursements of the Home Treasury, excluding Loans and Council Bills, were taken at £17,917,200: it was proposed to provide £16,500,000 of this by the sale of Bills on India, and to meet £1,330,900 by a reduction of cash balances. Owing to the heavy loss of

1896-97 General Summary.

Land Revenue caused by the scarcity in November and December last, and the large expenditure on Famine Relief during this cold weather, the Secretary of State, at the request of the Government of India, reduced the scale of his drawings, and it is now expected that the total drawings in the current year will be less than the original estimate by £1,200,000. The cash balances in the Home Treasury on April 1, 1896 were also less than the estimate by £400,926, owing mainly to a decrease in the drawings at the end of 1895-96. The total reduction in Council Bills thus amounted to £1,600,926 On the other hand, the net disbursements during 1896-97 are expected to be lower than the original estimate by £2,956,900, in consequence chiefly of large receipts from Railway Companies. The new Burma Railway Company has paid in subscribed capital to the extent of £1,836,500, and the East Indian Railway Company has issued additional debentures for £400,000. There have also been the usual savings on the Estimates of Expenditure both by the Government and the Railway Companies. This improvement in his cash balance enables the Secretary of State to discharge without replacing £1,000,000 out of the £2,500,000 of the twelve months' India Bills which fell due this year. The payment of that £1,000,000 reduces the cash balance of March 31, 1897, so that it will exceed the Budget Estimate by £350,874 only.

1896-97. Sterling Loans.

201. No increase to the sterling debt has been made in 1896-97, but in accordance with the intention announced in paragraph 173 of the last Financial Statement, India Stock for £2,400,000 were issued in April 1896 in order to discharge £2,000,000 India Debentures and £313,700 South Indian Railway Debentures. Taking advantage of the favourable state of the money market, the Secretary of State decided to issue the new Stock at 2½ per cent, and tenders for the loan were invited on April 28, 1896. The result was satisfactory: the total amount tendered was more than £6,000,000; the average rate at which the loan was raised was £103 0*s.* 6*d.* per cent, and the minimum rate of accepted tenders £102 16*s.* 0*d.*

Temporary Debt.

202. It was the original intention to issue an equivalent amount of new India Bills to repay temporary debt (India Bills) falling due in the year, but, as above explained, it has not been necessary to do this to the full amount, and according to the present programme only £1,500,000 will be raised and £2,500,000 discharged during the year, the additional £1,000,000 being met from cash balances.

Capital of Railway Companies.

203. The net issues to Railway Companies during 1896-97 were taken in the Budget Estimates at £628,100, but it is now estimated that there will be a net receipt from the Companies of £1,546,200. The following are the details:—

	Budget. £	Revised. £
RECEIPTS.		
Subscribed capital—		
(*a*) State Lines	1,399,000	2,783,100
(*b*) Guaranteed Lines	1,550,000	1,153,500
Miscellaneous	3,000	6,700
TOTAL .	2,952,000	3,943,300
ISSUES.		
For discharge of debentures—		
(*a*) State Railways	582,900	126,700
(*b*) Guaranteed Lines	1,152,000	744,400
For Stores, Establishment Charges, etc.—		
(*a*) State Railways	1,080,200	1,012,700
(*b*) Guaranteed Lines	767,000	513,300
TOTAL .	3,580,100	2,397,100

Of the total new capital of £2,949,000 entered in the Budget Estimate, the sum of £1,732,900 was intended for discharge of debentures, leaving £1,216,100 as required for expenditure. Some of the debentures have been renewed instead of being discharged, but the new capital for expenditure according to the Revised Estimate amounts to £3,065,400. This large increase of £1,849,300 over the Budget Estimate is due to the formation of a new Company to take up the Burma Railway from September 1, 1896. As already stated in paragraph 200, the total receipts from this Company on account of subscribed capital are estimated at £1,836,500.

The requirements of the Railway Companies for stores, establishment charges, etc., were overestimated, and the programmes of the Companies are always liable to important changes.

Railway Companies' Remittances.

204. The Railway Companies whose transactions are above dealt with have separate capital deposit accounts in England, and funds withdrawn in England are directly brought to account in the Home Treasury. But closely connected with these are the Remittance transactions of Railway Companies working State lines in India, such as the East Indian, the South Indian, and the Rajputana-Malwa Railways. Advances are made to these Companies in England for the purchase of stores, etc., and the advances adjusted in India by debit to the Revenue Accounts of the lines, but funds raised for Capital Expenditure by the East Indian Railway Company under the authority of the East Indian Railway Company's Act are also treated as remittances. The estimate of the remittances of the Companies was taken at £117,200 in the Budget Estimate, but in the Revised Estimate there is entered a net receipt in England of £194,300. The following are the details of the transactions :—

	Budget	Revised.
	£	£
Advances for purchase of Stores—		
East Indian Railway	360,000	407,500
Rajputana-Malwa	50,000	43,600
South Indian Railway	92,300	58,300
Bengal and North-Western Railway . . .	16,900	101,400
	519,200	610,800
East Indian Railway Debentures	400,000	802,500
Transfer fees, etc.	2,000	2,600
	402,000	805,100
Net Remittance from India .	117,200	—194,300

The net improvement in the receipts of £311,500 is due to the issue of £400,000 additional debentures by the East Indian Railway Company.

Family and other Remittances.

205. The net payments on account of family and other remittances from India will be £150,700 less than the Budget Estimate, owing mainly to the recovery from Her Majesty's Imperial Government of the extra charges connected with the employment of Indian Native Troops at Suakin.

1897-98. Home Treasury Ways and Means.

206. The net disbursements at the Home Treasury in 1897-98, excluding Loans and Council Bills, are estimated at £18,043,400. It is not, however, possible for the Government of India to supply the whole of this amount by means of Council Bills next year, and the Secretary of State has, with reference to the probable famine requirements in India, and to the expenditure on railway construction, reduced his estimate of drawings to £13,000,000. The reduced drawings will be supplemented by a sterling loan of £3,500,000 to be raised by the issue of India Stock and by a temporary loan of £2,000,000, of which £1,000,000

will replace a like amount of India Bills issued in the current year, and the other £1,000,000 will replace the amount of India Bills which it was possible, as above explained, to discharge without replacement this year. The last amount will be additional debt so far as the year 1897-98 is concerned.

According to the programme now announced the net disbursements of the Home Treasury will be met, in the year 1897-98, by the sale of Bills on India of £13,000,000, by the creation of additional sterling debt to the extent of £4,500,000, and by a reduction in the cash balances of £543,400.

207. It should be understood that in stating the present intentions of the Secretary of State no sort of pledge is given that he will adhere to the programme.

INDIA.

Ways and Means in India.

208. The following is a summary of the Estimate of Ways and Means in India:—

	1896-97		1897-98.
	Budget.	Revised	Budget
RECEIPTS.	Rx.	Rx.	Rx.
1. Excess of Revenue in India over the Expenditure charged against it	27,928,300	23,844,700	23,955,700
2. Rupee Loan	4,000,000	6,048,700	4,000,000
3. Increase of the Unfunded Debt, mostly Savings Bank Deposits, net	831,100	—317,300	502,400
4. Other items, net	474,500	—655,700	21,700
5. *For Remittance to Secretary of State, net*—			
(*a*) *Railway Companies' Remittances*	117,200	—194,200	500,500
(*b*) *Other Remittances*	178,300	50,800	213,000
Add—Opening Balance	16,500,488	16,500,510	13,465,810
TOTAL	50,029,888	45,277,410	42,659,110
OUTGOINGS.			
6. Excess Expenditure charged to Provincial Balances	886,400	1,228,500	1,190,000
7. Expenditure not charged to Revenue	4,080,000	2,738,800	4,790,600
8. Rupee Debt discharged	275,000	717,000	575,100
9. Loans to Municipalities, etc., net	406,100	764,700	245,400
10. *Issues on Capital Account to Railway Companies, net*	1,526,400	964,600	956,300
11. Council Bills—*Sterling Amount*	10,503,400	15,288,500	13,025,300
12. Do. Exchange	12,296,600	10,109,700	8,554,700
Add—Closing Balance	14,055,988	13,465,810	13,321,710
TOTAL	50,029,888	45,277,410	42,659,110

The headings in italics are connected with, and explained by, the corresponding figures of the Secretary of State's account in England. The others refer to purely Indian transactions.

1896-97. General Summary.

209. The net Revenues in India were taken in the Budget Estimate of 1896-97 at Rx. 27,928,300, but owing to heavy loss of Revenue and increase in Expenditure caused by the famine, they are now estimated to yield only Rx. 23,844,700. This large deficiency of Rx. 4,083,600 in the Revenues is further increased by withdrawals from the Savings Banks and increased loans for famine

relief purposes. The Savings Bank transactions are expected to result in a net withdrawal of Rx. 241,100 against a net receipt of Rx. 750,800 entered in the Budget Estimate, and the net amount of loans will exceed that estimate by Rx. 358,600. The total diminution of the cash balances under the three heads mentioned thus amounts to Rx. 5,434,100. The deficiency is met chiefly by a reduction in Council Bill payments of Rx. 3,402,000 and the issue of a loan, not contemplated in the Budget Estimates, for Rx. 2,048,700 for the investment of two crores of the Currency Reserve. The year is now expected to close with a cash balance of Rx. 13,465,810.

1897-98. Main features.

210. The important disbursements—in India and England taken together—for which we have to provide in 1897-98, otherwise than from the Revenues of the year, are (1) the deficit in the Revenue Account both on Imperial and Provincial Account, (2) the Capital Expenditure of Government not charged to Revenues, and (3) the advances to Railway Companies for Capital Expenditure. The deficit in the Revenue Account, including the expenditure of the Provincial Governments from balances, is estimated at Rx. 3,654,000. The total estimate of Capital Expenditure by the Government not charged to Revenue amounts to Rx. 6,588,600, including Rx. 1,130,700 on account of the Assam-Bengal Railway, Rx. 537,900 for the East Indian Railway, and Rx. 600,000 for the Tirhoot Railway Extension; and we have undertaken to advance in 1897-98 Rx. 1,174,500 to the Indian Midland and Bengal-Nagpur Railways for expenditure in India on new extensions. The total of the disbursements above mentioned amounts to Rx. 11,417,100. Our cash balances are now reduced to as low a level as is consistent with our requirements in the months of minimum balance—November and December—, and they cannot be drawn upon to meet any substantial portion of the above sum. We must, therefore, have recourse to loans; and it is intended to raise Rx. 4,000,000 by a rupee loan in India, and to meet the remainder of the liability by the sterling loans in England mentioned in paragraph 206, the Secretary of State's drawings being reduced.

Rupee Loan of 1896-97.

211. It was announced in paragraph 178 of the last Financial Statement that a new loan of Rx. 4,000,000 would be raised in India in 1896-97. This loan was issued on June 22, and tenders for it were received on July 22. The favourable state of the money market at the time enabled the Government to issue the loan at 3 per cent, and in spite of the reduced rate of interest the average price of the loan was R103-1-10½ per cent.

Conversion and discharge of unguaranteed 3½ per cent loan

212. As the price of the new 3 per cent loan remained above par for some time after its issue, it was decided to offer the balance of the unguaranteed 3½ per cent loans, amounting to Rx. 5,684,950, for conversion into the new loan. Accordingly, by Notification No. 3850, dated September 4, 1896, the 3½ per cent loans of 1853-54 and 1893-94 were notified for discharge on January 30, 1897, and the option was given to holders of notes of the 3½ per cent loans to tender them for transfer to the 3 per cent loan of 1896-97 by October 2, 1896. The amount of the 3½ per cent loans transferred to 3 per cents in exercise of this option was Rx. 4,887,160, leaving Rx. 797,790 to be discharged. Provision has been made in the present estimates for the discharge of Rx. 360,000 in 1896-97 and Rx. 350,000 in 1897-98.

Addition to Currency Investment

213. The question of increasing the investment of the Government Currency Reserve by 2 crores of rupees had been considered by the Government last year, and it was in contemplation to make the necessary change in the Paper Currency Act in the present session. As soon as it was ascertained towards the middle of October that the famine would entail heavy loss of Revenue and increase in Expenditure, we were compelled to ask the Secretary of State to reduce his drawings. The Secretary of State announced the necessary reduction, and this, combined with low Government balances and other causes, produced considerable

tightness in the money market in November and December. To relieve this tightness by making available to the commercial public through increased Council Bill drawings and through the Presidency Banks the additional two crores which the measure would set free from the Currency Reserve, Act XXI of 1896 was passed on December 17, and Government Promissory Notes for Rx. 2,048,650 of the 3 per cent loan were issued to the Currency Department on December 18 1896: see Notifications Nos. 5366 and 5367 of the latter date.

214. The balance of the 3 per cent loan on 31st March 1897 will be Rx. 10,935,860, and, as already stated, it is the present intention to increase that balance by the issue of a new loan for Rx. 4,000,000 in 1897-98. Although this is the present intention, full liberty is reserved, as usual, to alter the programme, as now announced, to any extent that may be considered desirable.

215. The following table gives the details of the transactions of Savings Banks during the last few years and the estimated transactions for 1896-97 and 1897-98:—

Year.	Net additions to deposits, cash.	Interest.	Total addition.
1888-89	685,200	261,800	947,000
1889-90	—362,900	272,200	—90,700
1890-91	250,700	279,700	530,400
1891-92	517,900	306,200	824,100
1892-93	548,900	339,400	888,300
1893-94	179,900	368,000	547,900
1894-95	— 84,500	297,000	212,500
1895-96	247,700	338,500	586,200
1896-97, Budget	422,000	328,800	750,800
1896-97, Revised	—589,600	348,500	—241,100
1897-98, Budget	78,000	350,000	428,000

The high price of food-grains and the prevalence of distress have probably caused withdrawals from Savings Banks in the current year. It should be noted, however, that Rx. 230,000 of net additions in 1895-96, and the same amount of net withdrawals of 1896-97, should be taken against each other, being transactions on account of a large Provident Fund which for a time was held on Savings Bank Account. Corrected for this the figures for the three years stand—

	Rx.
1894-95	—84,500
1895-96	+ 17,700
1896-97, Revised	—359,600

For 1897-98 no increase in the net deposits in Post Office Savings Banks is anticipated; but the normal additions to the several departmental Provident Funds are taken into account.

216. The net issues on account of loans by the Government to Municipalities, etc., in 1896-97 are now expected to be Rx. 764,700 against Rx. 406,100 entered in the Budget Estimate—an increase of Rx. 358,600. This increase is the difference between the increases in the gross advances of Rx. 436,800 and in the recoveries of Rx. 78,200. The increased advances represent loans to agriculturists and others in provinces affected by famine and scarcity: the additional grants for such advances sanctioned by the Government of India during the year amounted to Rx. 663,000. Provision has been made in the Budget Estimate of 1897-98 for net issues on account of loans to the extent of Rx. 245,400. According to estimates furnished by the several Local Govern-

ments, large amounts may be usefully spent in the provinces by Municipalities and other Local Bodies on drainage and waterworks, but the Government of India have not been able to provide for the whole of the requirements out of their balances in 1897-98. This inability is due to the fact that we are obliged to provide fully, as a first claim upon our resources, for the whole amount of advances and loans required in connection with the famine or plague, and that after providing for such requirements there is no margin of available funds to be lent to Local Bodies for ordinary works of public improvement. If funds are urgently required for such works in 1897-98, the local authorities concerned will, it is hoped, be able to raise them directly in the open market.

Cash Balance.

217. The year 1897-98 is estimated to close with a cash balance in the Indian Treasuries of Rx. 13,321,710, which is less than the opening balance of the year by Rx. 144,100 only.

Section VII.—Summary.

218. The principal features in this Statement are—

(1) The Accounts of 1895-96 closed with a surplus of Rx. 1,533,998.

(2) The Revised Estimates of 1896-97 show a deficit of Rx. 1,986,900. The cause of the deficit is the failure of the monsoon and the consequent scarcity and famine. There is a direct expenditure on Famine Relief of Rx. 1,965,700: the scarcity has also caused a loss of Land Revenue of Rx. 2,432,100, a loss of Railway Revenue of Rx. 1,420,000, and smaller losses under other heads of Revenue, as well as increases of expenditure under many of the ordinary heads. In Bombay the plague has been added to the famine, and joined with it in bringing about these losses. In addition, there is a loss of Opium Revenue of Rx. 508,600 caused by a fall in the price realised for Bengal Opium and a reduction in the exports of Malwa Opium. On the other hand, the rise in the rate of exchange from 13$\frac{3}{4}$*d.* to 14·46*d.* the rupee secures a saving of Rx. 1,329,700 in the exchange on sterling payments.

(3) The Budget Estimates of 1897-98 show a deficit of Rx. 2,464,000. The famine accounts for this deficit also.

(4) The expenditure on Famine Relief is estimated at Rx. 3,641,200, the loss of Land Revenue at Rx. 436,500: the loss of Railway Revenue at Rx. 901,300; and the famine also causes other losses of Revenue and increases of Expenditure.

(5) The loss of Opium Revenue amounts to Rx. 1,079,100.

(6) The rise in the rate of exchange from 13$\frac{3}{4}$*d.* to 14·46*d.* the rupee will secure a saving of Rx. 1,360,000 in the exchange on sterling payments, as well as savings in the pay of the British Troops and in the cost of Exchange Compensation Allowances. There will also be a considerable reduction in the Military expenditure, as the heavy expenditure on preparations for mobilization, which was specially provided for in 1896-97, will not recur.

(7) The Capital Expenditure on Railways is expected to be as follows:—

	1896-97. Rx.	1897-98. Rx.
On State Railways (including expenditure on the East Indian Railway and the Assam-Bengal Railway from capital raised by the Companies)	5,767,700	6,700,000
On Railways of the Companies under contract with the Government from funds raised by them	2,990,600	3,430,000
On Railways of Companies outside the Government Accounts, and Branch Lines .	2,470,200	3,283,800

(8) It is expected that the Secretary of State will sell Council Bills for £15,300,000 in 1896-97 and for £13,000,000 in 1897-98.

(9) In 1896-97 the Secretary of State raised a loan of £2,400,000 by the issue of 2½ per cent India Stock to discharge debentures which fell due; and he paid off India Bills falling due in the year for £2,500,000, and issued India Bills for £1,500,000. In 1897-98 he intends to raise a loan of £3,500,000 by the issue of India Stock, to issue India Bills for £2,000,000, and to pay off India Bills falling due for £1,000,000.

(10) These announcements are accompanied by the usual reservation of entire liberty to the Secretary of State to vary the amounts to be obtained by Bills or raised by loans, as he may find occasion.

(11) The Government of India raised a public loan of Rx. 4,000,000 in 1896-97 at 3 per cent, and also issued new 3 per cent paper to the Head Commissioner of Paper Currency for the investment of Rx. 2,000,000 of the Currency Reserve authorised by Act XXI of 1896 passed on December 17. It is intended to raise a loan for Rx. 4,000,000 in 1897-98 Full liberty is, however, reserved to the Government of India to vary this intention in any way and to any extent which may be expedient. The 3½ per cent loan of 1893-94 was successfully converted to 3 per cent in 1896-97.

(12) The Government of India are for the time in serious financial difficulties caused by the famine. When that calamity and the plague in Bombay and Sind shall have passed away, the Government will, it is hoped, be found to be in a strong financial position.

J. WESTLAND,

CALCUTTA;
March 19, 1897.

MILITARY SECRETARY'S OFFICE.

NOTIFICATION.

Calcutta, the 18th March, 1897.

No. 11115 *M.*—His Excellency the Viceroy and Governor-General will leave Calcutta for Simla on Saturday, the 27th March 1897, at 5-33 P.M. (*Calcutta time*). His Excellency's departure from Calcutta will be *private*.

His Excellency will visit *en route* Bankipore, Lucknow and Umballa and will march by the Old Road from Kalka and arrive at Simla on Tuesday, the 6th April 1897, at about 2 P.M. His Excellency's visit to the places named will be *private*, and His Excellency's arrival at Simla will also be *private*.

All covers intended to reach His Excellency the Viceroy and Governor-General and party during His Excellency's journey should be addressed "Governor-General's Camp," without the addition of any Post town.

The party accompanying His Excellency on tour is as follows :—

1. Her Excellency the Countess of Elgin.
2. Lady Elizabeth Bruce.
3. H. Babington Smith, Esq., Private Secretary to the Viceroy.
4. Surgeon-Colonel B. Franklin, C.I.E., Surgeon to the Viceroy.
5. Captain R. E. Grimston, Aide-de-Camp to the Viceroy—*As far as Umballa.*
6. Captain S. H. Pollen, Aide-de-Camp to the Viceroy.

All communications connected with business of a mere routine nature should be sent, as usual, to the Head Quarters of the several Departments.

By Command,
A. DURAND, *Colonel,*
Military Secretary to the Viceroy.

HOME DEPARTMENT.

NOTIFICATIONS.

ESTABLISHMENTS.

Calcutta, the 19th March, 1897.

No. 270.—The services of Mr. W. S. Meyer, of the Indian Civil Service, Madras Establishment, are placed temporarily at the disposal of the Finance and Commerce Department.

MEDICAL.

The 17th March, 1897.

No. 196.—The services of Surgeon-Lieutenant C. Thomson, M.B., C.M., I.M.S. (Bengal), are placed temporarily at the disposal of the Government of the North-Western Provinces and Oudh, with effect from the date on which he was relieved of his special famine duties at Saugor.

SANITARY.

The 19th March, 1897.

No. 1011.—It is notified for general information that, in exercise of the power conferred by section 1, Act I of 1870, and with the previous sanction of the Governor General in Council, the Government of Madras have, by notification dated the 2nd March, 1897, extended the rules for quarantine against plague published in the *Government of India Gazette* of the 27th February, 1897 (Home Department Notification No. 703, dated the 23rd February, 1897, Part I, p. 142), to all ports of the Madras Presidency as regards vessels arriving from Goa and from all ports in Sind and in the Bombay Presidency.

No. 1020.—The following documents regarding quarantine and trade restrictions imposed in foreign countries in consequence of the existence of bubonic plague in India are published for general information :—

Extract from the "Journal Officiel" of the 28th January, 1897.

Le Président de la République Française,
Sur le rapport des Ministres de l'Intérieur et des Finances,
Vu la Loi du 3 Mars, 1822 ;
Vu le Décret du 4 Janvier, 1896, portant Règlement de Police Sanitaire Maritime,
Décrète :

Article 1er. A partir de la promulgation du présent Décret, aucune marchandise provenant directement ou indirectement de Bombay, de Kuratchi, ou de toute autre localité où l'existence de la peste aura été constatée, ne pourra pénétrer en France ou en Algérie que par un des ports suivants : Marseille, Pauillac, Saint-Nazaire, le Havre, Dunkerque, et Alger.

Art. 2. Tout colis contenant des linges de corps ayant servi ou n'ayant pas servi, des hardes ou vêtements ayant servi ou n'ayant pas servi, objets de literie ayant servi ou n'ayant pas servi, des tapis vieux, ou neufs ou toute marchandise consistant en drilles, chiffons, cuirs verts, peaux fraîches, débris frais d'animaux, onglons, sabots, ayant quitté après le 5 Février un des ports de l'Océan Indien autre que ceux reconnus contaminés de peste, depuis Mascate, y compris les ports du Golfe Persique, jusqu'au Cap Comorin, sera accompagné d'un certificat d'origine visé par un Agent Consulaire Français.

Art. 3. Les infractions aux dispositions qui précèdent seront punies des peines prévues par la Loi du 3 Mars, 1822.

Art. 4. Le présent Décret sera publié et affiché ainsi que la Loi du 3 Mars, 1822, dans tous les ports de France.

Art. 5. Le Ministre de l'Intérieur et le Ministre des Finances sont chargés, chacun en ce qui le concerne, de l'exécution du présent Décret, qui sera inséré au "Bulletin des Lois" et publié au "Journal Officiel."

Fait à Paris, le 27 Janvier, 1897.

(Signé) FÉLIX FAURE.

Par le Président de la République :

Le Ministre de l'Intérieur,

(Signé) LOUIS BARTHOU.

Le Ministre des Finances,

(Signé) GEORGES COCHERY.

Regulations issued by the Sanitary, Maritime, and Quarantine Board at Cairo.

Sitting of the 3rd February, 1897.

Le Conseil a décidé :

1° D'interdire, jusqu'à nouvel ordre, l'importation, en Egypte, des marchandises et objets susceptibles embarqués sur les navires ayant touché un port où existe la peste (voir liste annexée).

2° De supprimer, jusqu'à nouvel ordre, la visite médicale, pendant la nuit, de tous les navires ayant touché un port infecté de peste.

3° Le Conseil a, en outre, décidé que les médecins sanitaires, à l'arrivée à Suez des navires ayant touché un port où existe la peste, devront non seulement examiner les papiers de bord, mais demander aussi aux capitaines de déclarer, sous serment, s'ils ont engagé en Egypte, à leur voyage d'aller, des chauffeurs, des gens de service ou autres personnes. Dans le cas affirmatif, ils constateront leur présence à bord.

L'engagement des chauffeurs indigènes étant contracté aux bureaux des Ports et Phares à Port-Said, il été arrêté avec le directeur local de ce service que toutes les fois que des chauffeurs seront pris à bord d'un navire, avis officiel en sera donné à l'office quarantenaire par une note donnant le nom des chauffeurs ainsi que le nom et la destination du navire à bord duquel ils auront été engagés.

Ces renseignements seront communiqués à l'office quarantenaire de Suez pour lui faciliter ses recherches à ce sujet, lors de l'arraisonnement des navires à leur retour à Suez.

Ces chauffeurs, gens de service, etc., seront débarqués aux Sources de Moïse, comme les passagers à destination d'Egypte, pour y être soumis aux mesures réglémentaires, à moins que les capitaines ne déclarent vouloir les amener jusqu'en Europe. Dans ce cas, ils seront surveillés par les gardes sanitaires sur le parcours du Canal et à Port-Said.

Liste des marchandises et objets susceptibles approuvée par le Conseil dans sa séance du 3 Février 1897.

Drilles, chiffons, tapis, broderies, linges de corps, hardes, vêtements portés et objets de literie ayant servi (non transportés comme bagages), cuirs verts, peaux fraiches, débris frais d'animaux, y compris le crin et la laine brute, onglons, sabots, sacs, plantes vertes, tubercules, racines, fruits frais et séchés.

Sitting of the 4th February, 1897.

Le Conseil a décidé ,

1° Que les navires transitant le Canal en quarantaine ne peuvent pas embarquer du charbon à Port-Saïd pendant la nuit.

Cette operation devra être faite de jour et avec les précautions sanitaires voulues.

2° Que le transit du Canal doit être réglé, pour tous les navires en quarantaine indistinctement, de façon à ce que ces navires n'arrivent à Port-Saïd pendant le jour.

Extract from the "Journal Officiel" of the 10th February, 1897.

Le Président de la République Française,
Sur le rapport des Ministres de l'Intérieur et des Finances,
Vu la Loi du 3 Mars, 1822;
Vu le Décret du 19 Janvier, 1897, portant interdiction d'importation ou de transit en France et en Algérie d'objets ou marchandises en provenance des ports Indiens contaminés de peste;
Vu l'Article 1er du Décret du 27 Janvier, 1897, limitant le nombre des ports ouverts aux provenances des pays contaminés de peste;
Vu la délibération du Comité de Direction des Services de l'Hygiène, en date du 6 Février, 1897,

Décrète:

Art. 1er. Des dispositions du Décret du 19 Janvier susvisé sont étendues dans les ports de la Méditerranée à toutes les marchandises provenant directement ou indirectement de Bombay, de Kuratchi et des autres ports contaminés de peste.

Dans les ports de l'Océan et de la Manche, les marchandises non prohibées par le Décret susvisé ne seront admises qu'après désinfection.

Art. 2. Les passagers provenant de ports reconnus contaminés de peste ne pourront entrer en France que par les ports de Pauillac, Saint-Nazaire, le Havre, et Dunkerque.

Ils ne seront admis à débarquer qu'apres qu'ils auront subi une observation fixée à huit jours pour Pauillac et Saint-Nazaire, à quatre jour pour le Havre et Dunkerque, et que leurs bagages auront été désinfectés.

Art. 3. Est rapporté l'Article 1er du Décret du 27 Janvier, 1897.

Art. 4. Le Ministre de l'Intérieur et le Ministre des Finances sont chargés, chacun en ce qui le concerne, de l'exécution du présent Décret, qui sera publié au "Journal Officiel," et inséré au "Bulletin des Lois."

(Signé) FÉLIX FAURE.

Fait à Paris, le 9 Février, 1897.

Par le Président de la République:

Le Ministre de l'Intérieur,
(Signé) LOUIS BARTHOU.

Le Ministre des Finances,
(Signé) GEORGES COCHERY.

Circular letter from the Sanitary Office, Baghdad, to Her Majesty's Consul General at Baghdad, No. 14, dated the 11th February, 1897.

Monsieur Le Consul,

Par décision du Conseil du santé, la quarantaine de dix jours imposée aux provenances des Indes est portée a quinze jours. La mesure prohibitive édictée contre les navires qui auraient présentées des cas de peste, ou suspects de cette maladie a bord pendant la traversée est maintenue, cependant dans le cas ou la peste venait á se manifester soit parmi les passagers soit parmi l'équipage, aprés l'arrvée du navire au lazaret de Bassorah, navires et passagers seront soumis a une quarantaine de dix jours a partir du dernier cas constaté, avec désinfection trés rigoureuse des hardes, effets et bagages des passagers et de l'équipage. Le navire sera désinfecté et l'eau potable renouvellée. Les eaux des cales seront vidées apres avoir été prealáblement désinfectées, toutfois les navires de cette catégorie auront le faculté de retourner en contumace avec les passagers qu'ils y auraient a amener dans leur pays d'origine. La même quarantaine et les mêmes mesures de rigueur seront également appliquées aux navires provenant des ports du littoral du Bélouchistan jusqu'a la frontiére de la perse. La mesure de prohibition portée contre les visiteurs chiites et les cadavres provenant des Indes est maintenue, et elle est en outre étendue aux provenances du littoral du Bélouchistan. L éntrée des cadavres en turquie est également prohibitée de tout le littoral Persan, du Golfe persique ainsi que de toute la frontiere Persan du terre allant de l'Embouchure du Shat-el Arab jusqu'à Béyazid inclusivement.

Le Gérant de l'Inspecteur Sanitaire,
(Signé) DR CHARLES ADLER.

NOTIFICATIONS.

EMIGRATION.

Calcutta, the 16th March, 1897.

No. 348—7-9.—The following draft of certain additions which it is proposed to make to the Rules under the Indian Emigration Act (XXI of 1883) is published, as required by section 81 of the said Act, for the information of persons likely to be affected thereby, and notice is hereby given that the draft will be taken into consideration by the Governor General in Council on or after the 17th April 1897.

2. Any objection or suggestion which may be received from any person with respect to the draft before that date will be considered by the Governor General in Council.

Draft of proposed additions.

(1) In the test prescribed for lime-juice in Rule 178A, Chapter V, Section III (added to the original rules by Notification No. 170, dated 1st February 1896), for the words in the *Note*—

"A darkening indicates lead or copper,'

the following shall be substituted, namely :—

"A darkening which disappears again almost immediately is due to iron, but a persistent darkening indicates the presence of lead or copper."

To paragraph 2 of the said *Note* the following shall be added, namely :—

"As a confirmatory test the following process may be used :—

"Evaporate some of the juice to dryness and ignite; then dissolve the remaining ash in Nitric Acid and divide the solution into two portions. To one of these add a little Iodide of Potassium solution: a yellow precipitate indicates lead. To the other portion add Ferrocyanide of Potassium. a chocolate precipitate indicates copper, and a white precipitate lead."

GENERAL.

The 20th March, 1897.

No. 755.—The Governor General in Council is unwilling to allow Sir Edward Buck, lately Secretary to the Government of India in the Department of Revenue and Agriculture, to leave this country without a public expression of the high estimation in which his services to the State are held by Government.

When, in accordance with the recommendations of the Famine Commission, the Department of Revenue and Agriculture was reconstituted in 1881, Sir Edward Buck, under whose control measures had been inaugurated in the North-Western Provinces which in many respects anticipated those recommendations, was selected to fill the office of Secretary in the new Department; and that office he has continued to hold for over fifteen years. During this period a system of continuous record of all matters connected with the land has been elaborated, and a local agency trained, if not created, for its maintenance; the general principles which should regulate the assessment and collection of revenue have been laid down or reviewed; the system of State aid to the agriculturist and to agricultural improvement has been developed; the relations between landlord and tenant have come under review in almost every province in India; the conditions upon which emigration beyond the seas is permitted have been largely revised; a machinery for economic inquiry and agricultural experiment, though still in its infancy, has been devised; and last, but not least, the broad lines of famine relief which were laid down by the Famine Commission have been worked out in minute detail in consultation with Local Governments. In every branch of the revenue administration questions of the highest importance to the well-being of the country have come under discussion; and the breadth and clearness of view and the tenacity of

purpose which Sir Edward Buck has always placed at the disposal of those in whose hands the decision lay, have been of the greatest service in securing wise conclusions.

Sir Edward Buck retired from active employ some little time ago, on the completion of his thirty-five years' tour of service. But his labours did not cease with his retirement; and the Governor General in Council has delayed this recognition of his services, in order that it might appear simultaneously with the series of Resolutions which will be found in the Supplement to to-day's *Gazette of India*, and which are the direct outcome of the conferences that Sir Edward Buck held with the authorities of the various provinces during the cold weather of 1895-96. They summarise past progress and indicate the lines which future advance should follow, in carrying out the recommendations of the Commission which was appointed to advise the Secretary of State for India how best "to diminish the severity of famines, and to place the people in a better condition for enduring them." To the investigation of those problems, all-important to the material welfare of the country and its people, which this wide reference embraced, Sir Edward Buck has devoted the last fifteen years of his service; and the Governor General in Council believes that the general efficacy with which the machinery, carefully elaborated beforehand, has been put in motion to meet the terrible calamity under which India is now suffering, is in no small part the fruit of his past labours. No happier assurance than this could accompany any servant of the State on his retirement from official life.

FORESTS.

The 10th March, 1897.

No. 322—107 *F.*—Mr. E. M. Coventry, Assistant Conservator of Forests, 1st grade, Punjab, is transferred temporarily to the North-Western Provinces and Oudh in the interests of the public service.

DENZIL IBBETSON,
Secretary to the Government of India.

FOREIGN DEPARTMENT.

NOTIFICATIONS.

Fort William, the 16th March, 1897.

No. 505-*G.*—Mr. H. V. Cobb, of the Indian Civil Service, Political Agent of the 3rd class and Assistant Commissioner of Ajmere, is granted furlough for eighteen months, under Article 340 (*b*) of the Civil Service Regulations, with effect from the 20th March, 1897, or the subsequent date on which he may avail himself of the furlough.

W. J. CUNINGHAM,
Secretary to the Government of India.

FINANCE AND COMMERCE DEPARTMENT.

NOTIFICATIONS.

SEPARATE REVENUE.

POST OFFICE.

Calcutta, the 16th March, 1897.

No. 1215-*S. R.*—In exercise of the powers conferred by the Indian Post Office Act (XIV of 1866) and in modification of the conditions regarding certificates of posting prescribed in the Notification of the Government of India in the Financial Department, No. 1845, dated the 15th March 1878, published in the *Gazette of India* of the 16th idem, the Governor General in Council is pleased to prescribe that, with effect from the 1st May 1897, any person posting at one time any number of unregistered parcels not exceeding

a certificate of posting in respect of such unregistered parcels or value-payable unregistered book-packets for a fee of half an anna, subject to the following conditions, namely :—

(1) the certificate of posting written in ink shall be presented to an officer on duty at the post office along with the articles to be posted during the hours fixed for the posting of such articles ;

(2) there shall be a separate certificate for each class of article headed with the words "Certificate of posting for unregistered parcels" or "Certificate of posting for value-payable unregistered book-packets," as the case may be, and the articles (not exceeding six) to which a certificate relates shall be separately presented with it ;

(3) the certificate shall contain an exact copy of the addresses on the articles to which it relates, and shall have a half-anna postage stamp affixed thereto ;

(4) the officer on duty shall compare the addresses of the articles with the certificate, and, if it be correct, shall obliterate the postage stamp and impress the date stamp upon the certificate. The certificate shall then be returned to the person who presented it.

No. 1216-*S.R.*.—In exercise of the powers conferred by the Indian Post Office Act (XIV of 1866) and in supersession of all existing notifications conflicting herewith, the Governor General in Council is pleased to prescribe the following conditions, subject to which inland and foreign parcels of all descriptions shall be posted, on and after the 1st May 1897, at any post office, namely :—

(1) In the case of a prepaid parcel all charges for postage, registration and insurance shall be paid by means of postage stamps affixed either to the cover of the article or to an official label which can be obtained free of charge at any post office. In either case, the sender or his messenger shall affix the stamps himself, postal officials being strictly forbidden to do so.

(2) Prepayment shall be compulsory in the following cases, namely :—
(*a*) in the case of any unregistered parcel,
(*b*) in the case of any insured parcel,
(*c*) in the case of any foreign parcel.

In the case of parcels other than the foregoing prepayment shall be optional.

(3) A receipt shall be granted by the post office for every registered parcel, but a parcel tendered for insurance, or for transmission under the value-payable system, or for transmission to foreign countries or other places for which a customs declaration is necessary, shall be presented at the post office, together with such form or forms as the Director General of the Post Office of India may prescribe for this purpose, with the particulars required to be filled in by the sender. In no other case will the person tendering a parcel be required to present any form with it.

ACCOUNTS AND FINANCE.

RATES OF EXCHANGE.

The 17th March, 1897.

No. 1242-*A.*.—It is hereby notified that the rate of exchange for the adjustment of financial transactions between the British and Indian Governments for the year 1897-98 has been fixed by the Secretary of State with the concurrence of the Lords Commissioners of Her Majesty's Treasury at 1*s.* 2$\frac{1}{2}$*d.* the rupee.

No. 262 R. T.

GOVERNMENT OF INDIA, PUBLIC WORKS DEPARTMENT.—RAILWAY TRAFFIC.

Calcutta, the 16th March 1897.

General rules for Railways under construction.

READ—

Sections 3 (4), 16 (2), 47 and 148 (1) of the Indian Railways Act (IX) of 1890.

Government of India, Public Works Department, notification No. 267, dated the 11th June 1890, appointing the Director General of Railways as the officer who is to make General Rules, under section 47 of the Indian Railways Act, 1890, in the case of a railway administered by Government.

Government of India, Public Works Department, notification No. 480½, dated the 30th October 1890, publishing, in the *Gazette of India* of the 8th November 1890, the Government of India resolution No. 736 R. T., dated the 17th October 1890, and the General Rules for working railways under construction and not used for the public carriage of passengers, animals, or goods.

Letter from the Director General of Railways, No. 95 T., dated the 8th March 1897.

OBSERVATIONS.—The Director General of Railways has applied for leave to adopt, on the Rajbari-Faridpore branch of the Eastern Bengal State railway, the General Rules for working railways under construction and not used for the public carriage of passengers, animals or goods, which rules were published in the *Gazette of India* of the 8th November 1890 under Public Works Department notification No. 480½, dated the 30th October 1890.

RESOLUTION.—The Governor General in Council is pleased to sanction the application of the General Rules, which are referred to in the foregoing observations, to the Rajbari-Faridpore branch of the Eastern Bengal State railway which has been sanctioned for construction.

ORDER.—Ordered that the General Rules, which have already been published in the *Gazette of India* of the 8th November 1890, be further notified to the railway servants and to the public by a copy thereof being kept open to inspection, free of any charge, in the office of Engineer in charge of the construction of the railway.

Ordered, also, that this resolution be communicated to the Director General of railways, for information and guidance, and that it be published under a notification in Part I of the *Gazette of India*.

W. S. S. BISSET, *Colonel, R.E.*,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

INVENTIONS and DESIGNS.

Calcutta, the 17th March 1897.

NOTIFICATIONS.

No. 939 P.—APPLICATIONS in respect of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act during the week ending 13th March 1897:—

No. 88 of 1897.—Jogodiswar Ghatak, mechanic, of 42, Chetla road, Alipur Post Office, Calcutta, for a spring *dhenki* for husking and cleaning paddy and other grains.

No. 89 of 1897.—Amended application—*See* No. 48 of 1897.

No. 90 of 1897.—Donald Cameron, civil engineer, of No. 1, Sylvan road, Pennsylvania, Exeter, England, and Frederick James Commin, fellow of the institute of surveyors, of No. 7, Bedford Circus, Exeter, England, for improvements in apparatus for automatically alternating the delivery of liquid to two chambers or receptacles and also its discharge therefrom, particularly applicable to sewage filters.

No. 91 of 1897.—Arthur Reginald Adams, chemist, of Guy's hospital, London bridge, in the county of Surrey, for improvements in or relating to electric batteries.

No. 92 of 1897.—Donald Cameron, civil engineer, of No. 1, Sylvan road, Pennsylvania, Exeter, England, and Frederick James Commin, fellow of the institute of surveyors, of No. 7, Bedford Circus, Exeter, England, for improvements in the treatment of sewage, and in apparatus therefor.

No. 93 of 1897.—Donald Cameron, civil engineer, of No. 1, Sylvan road, Pennsylvania, Exeter, England, Frederick James Commin, fellow of the institute of surveyors, of No. 7, Bedford Circus, Exeter, England, and Arthur John Martin, civil engineer, of Bradminch House, Exeter, England, for improvements in apparatus for the treatment of sewage or other liquids.

No. 94 of 1897.—John Jones, foreman engineer, of Merthyr Tydfil, in the county of Glamorgan, Wales, for improvements in blast pipes or apparatus for inducing draft in boilers of locomotive, portable, traction and other such engines.

No. 95 of 1897.—Shaikh Karim Bakhsh, contractor, son of Husain Bakhsh, Turkman Gate, Delhi, for improvements in the construction of sugarcane mills.

No. 96 of 1897.—Hanson's Fire-Proof Floor Syndicate, Limited, manufacturers, of 28, Victoria street, Westminster, London, for a new method of constructing fire-proof floors, flats, partitions and walls.

No. 97 of 1897.—George Spalding and John Steele Robbins, gentlemen, both citizens of the United States, and both of 361, El Dorado street, Stockton, county of San Joaquin, State of California, United States of America, for improvements in ploughs and rotary disk ploughs.

No. 98 of 1897.—Charles Henry Freeman Underwood, doctor of medicine, licentiate of the King and Queen's college of physicians of Ireland, licentiate of the Royal college of physicians of Edinburgh, licentiate of the Royal college of surgeons of Edinburgh, of No. 79, Meadows street, Bombay, for appliances for the preparation of water charged with chlorine.

No. 99 of 1897.—Major S. A. E. Hickson, Royal engineers, Colaba, Bombay, for a rifled and prismoidal-chambered barrel motor for steam or gas power.

No. 99A of 1897.—Amended application—*See* No. 392 of 1896.

No. 940 P.—SPECIFICATION of the undermentioned invention has been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the

Secretary appointed under that Act, and copies have been sent to the Governments of Fort St. George and Bombay, the Chief Commissioner of Burma, and the Director of the department of land records and agriculture, North-Western Provinces and Oudh. This and other specifications are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying :—

No. 228 of 1896.—Charles Langdon-Davies, electrician, of 45, Redcliffe square, Kensington, in the county of Middlesex, for improvements in rapid telegraphic transmission on cable lines. (Specification filed 3rd March 1897.)

No. 941 P.—THE fees prescribed in Schedule 4 of Act V of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 134 of 1888.—Fredrick Robert Jones, M.I.M.E., State engineer, Sirmoor, Nahan, Punjab, for improvements in vertical sugarcane mills. (From 23rd March 1897 to 23rd March 1898.)

No. 56 of 1891.—Alexander Login Lineff, electrical engineer, of 88, High road, Chiswick, in the county of Middlesex, for improvements relating to electric traction. (From 10th March 1897 to 10th March 1898.)

No. 942 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay within the time limited in that behalf by the fourth schedule to the Inventions and Designs Act (V of 1888) the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2), of the said Act, the exclusive privilege of making, selling and using the said inventions in British India and of authorising others so to do has ceased :—

No. 140 of 1892.—Eduard Luhmann's invention for improvements in process of extraction of carbonic acid gas from bicarbonates. (Specification filed 12th December 1892.)

No. 185 of 1892.—Daniel Whitney Houghton's invention for a desiccating box or chest for the preservation of wearing apparel or other articles of value from damp or atmospheric deterioration. (Specification filed 13th December 1892.)

No. 202 of 1892.—William Henry's invention for electrical generator. (Specification filed 9th December 1892.)

No. 245 of 1892.—John Armstrong Chanler's invention for improvements in pavements. (Specification filed 12th December 1892.)

Fee in respect of the continuance of an exclusive privilege—

(4) (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof—

The sum of ₹50 for each of the said inventions.

NOTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be addressed to the "Secretary to the Government of India, Department of Revenue and Agriculture (PATENTS BRANCH), CALCUTTA."

The office of the Secretary under the Act is open for the transaction of business from 11 A.M. to 4 P.M. on all days except Sundays and gazetted holidays.

The Government of India are advised that as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash, and applicants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's office are now on sale to the public at one anna and eight annas a copy respectively.

Attention is requested to the rules made by the Government on the 10th October 1895 in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitors' room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified; or, if the tenth day is a holiday, till the evening of the office day next following.

A. T. PRINGLE,
Offg. Secy. under the Inventions and Designs Act, 1888.

PURE SULPHATE OF QUININE.

Manufactured at the Bengal Government Cinchona Plantation.

From 1st April, 1896, the price of this Quinine will be as follows:—

1-pound tin, R18, or, post free, R18-12.
½ „ R 9, „ R9-8.
¼ „ R4-8, „ R5.

Analysis shows this Quinine to be of the purest manufacture; and it is guaranteed to be free from wilful mixture with the inferior alkaloids, Cinchonine and Cinchonidine. It is for sale only to Government officers, and only for cash, and may be had from the Superintendent, Botanic Garden, Seebpore, near Calcutta.

বঙ্গদেশের গবর্ণমেণ্টের সিন্‌কোনা আবাদে প্রস্তুত বিশুদ্ধ কুইনাইন।

১৮৯৬ সালের ১লা এপ্রেল হইতে এই কুইনাইনের নিম্নলিখিত মূল্য হইবে, যথা—

১ এক পৌণ্ড টিন . ১৮৲ বা ডাকমাশুল বিনা ১৮৲৷৹
½ আধ „ „ ৯৲ „ ৯৲৮
¼ সিকি „ „ ৪৲৸৹ „ ৫৲

পরীক্ষা করিয়া দেখা গিয়াছে যে এই কুইনাইন অতি বিশুদ্ধ রূপে প্রস্তুত করা হইয়াছে। এবং ইহা যে সিন্‌কোনাইন ও সিন্‌কোনীডাইন নামক অপকৃষ্ট ক্ষারের সহিত ইচ্ছা পূর্ব্বক মিশান হয় নাই তাহার গারাণ্টী দেওয়া যাইতেছে। ইহা নগদ মূল্যে কেবল গবর্ণমেণ্টের কর্ম্মচারীগণের নিকট বিক্রয় করা যাইবে, এবং কলিকাতার নিকটস্থ শিবপুরের কোম্পানির বাগানের সুপারিণ্টেণ্ডেণ্টের নিকট পাওয়া যাইতে পারিবে।

J. CLIBBORN, *Lieut.-Col., I.S.C.,*
Principal, Thomason College, Roorkee.

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.

The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.

In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1870:—

Terms of subscription payable annually in advance.

For the complete Series, *including postage*. . . . ₹22-8

	Without postage.	With postage.
	₹ a. p.	₹ a. p.
For the Calcutta Series	10 0 0	12 8 0
„ each of the Madras, Bombay, and Allahabad Series	6 0 0	7 0 0
„ a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...	2 0 0
„ a part of each of the Madras, Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	...	1 0 0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit:—

	For town.	For mofussil.
	₹ a. p.	₹ a. p.
For the Calcutta Series; per copy . .	0 8 9	0 10 3
„ each of the Madras, Bombay, and Allahabad Series; per copy . . .	0 5 3	0 5 9
„ the Calcutta Series. For the year .	7 2 6	8 6 3
„ each of the Madras, Bombay, and Allahabad Series. For the year . .	4 4 6	4 11 3

Persons desiring to subscribe for, or purchase, the Report should apply to—

Superintendent, Government Press, Madras.

The Superintendent, Government Central Press, Bombay.

The Curator of Government Books, North-Western Provinces and Oudh.

The Officer in charge, Bengal Secretariat Book Depôt.

Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrappers of the Indian Law Reports, Calcutta Series, at the following rates, payable in advance:—

	One page.	*Half page.*	*Quarter page.*
For one issue . . .	₹ 20	₹ 14	₹ 9
„ three issues . . .	„ 55	„ 36	„ 24
„ six „ . . .	„ 100	„ 68	„ 45
„ nine „ . . .	„ 145	„ 96	„ 64
„ twelve „ . . .	„ 180	„ 120	„ 80

Several volumes of the BENGAL LAW REPORTS, from August 1868 to December 1875, and FULL BENCH RULINGS, Parts I and II, are available at the following rates:—

	Without postage.	With postage.
	₹ a. p.	₹ a. p.
Bengal Law Reports, for one year . . Single copies, ₹2 per copy.	20 0 0	22 8 0
Full Bench Rulings, Parts I and II . .	20 0 0	22 8 0

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta.

Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription, ₹22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calendar year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

PART IV.

Acts of the Governor General's Council assented to by the Governor General

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 19th March, 1897, and is hereby promulgated for general information :—

ACT No. XI OF 1897.

An Act to facilitate the introduction as legal tender in Bhopal of current silver coin of the Government of India.

WHEREAS Her Highness the Begam of Bhopal has, with the concurrence of the Governor General in Council, decided that the current silver coin of the Government of India shall, with effect from a date to be hereafter fixed, be the only silver coin legally current in Bhopal:

And whereas Her Highness the Begam of Bhopal has agreed to receive from the Governor General in Council current silver coin of the Government of India in exchange for Bhopali rupees at an agreed rate;

And whereas it is expedient to facilitate the carrying out of the arrangements aforesaid;

It is hereby enacted as follows :—

Short title and commencement.

1. (1) This Act may be called the Bhopal Coinage Act, 1897; and

(2) It shall come into force at once.

Power to supply in exchange for Bhopali rupees rupees from the reserve retained under section 19, Act XX 1882.

2. Notwithstanding anything contained in the Indian Paper Currency Act, 1882, the Head Commissioner of Paper Currency may, for the purpose of exchange for Bhopali rupees at the agreed rate, supply to Her Highness the Begam of Bhopal rupees of the Government of India, to an amount not exceeding fifteen millions, from the coin retained and secured as a reserve to pay currency notes under section 19 of the said Act : XX of 1882.

Provided that the Bhopali rupees received in exchange for the said rupees of the Government of India shall be remitted as soon as convenient to the custody of the said Head Commissioner, and that current silver coin of the Government of India shall, as soon as may be, be coined to the extent necessary to replace the amount of rupees supplied from the reserve as aforesaid, and that the amount so coined shall be retained and secured in the said reserve.

Duration of Act.

3. This Act shall continue in force for six months from the date of the first supply of rupees under the powers above conferred.

J. M. MACPHERSON,

Secretary to the Government of India.

PART V.

Bills introduced in the Council of the Governor General of India for making Laws and Regulations, Reports of Select Committees presented to the Council, and Bills published under Rule 22.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Report of the Select Committee on the Bill to amend the Indian Stamp Act, 1879, was presented to the Council of the Governor General of India for the purpose of making Laws and Regulations on the 19th March, 1897 :—

We, the undersigned, Members of the Select Committee to which the Bill to amend the Indian Stamp Act, 1879, was referred, have considered the Bill and the paper noted in margin, and have now the honour to submit this our Report, with the Bill as amended by us annexed thereto.

Note by the Hon'ble Joy Gobind Law, dated 13th March, 1897 [Paper No. 1]

2. As clause 2 of the Bill as introduced referred only to transfers of leases by way of assignment, we have thought it well to insert a new clause which, by the addition of certain words to the heading under No 39 of Schedule I of the Stamp Act, makes it clear how transfers by way of underlease may be stamped.

3. Certain further amendments of the Stamp law were suggested in Committee, but, as we understand that the revision of the Stamp Acts will shortly be undertaken as a whole, we did not deem it advisable to consider them in connection with the present Bill.

The 17th March, 1897.

No. II.

A Bill to amend the Indian Stamp Act, 1897.

WHEREAS it is expedient to amend the Indian Stamp Act, 1879; It is hereby enacted as follows:—

Addition of new section after section 7A, Act I, 1879.

1. After section 7A of the Indian Stamp Act, 1879, as amended by Act No. VI of 1894, section 2, the following section shall be added, namely:—

Bonds, debentures or other certificates issued on loans under Act XI, 1879.

"7B. (1) Notwithstanding anything in this Act, any local authority raisiug a loan uuder the provisions of the Local Authorities Loan Act 1879, or of any other law for the time being in force, by the issue of bonds, debentures or other certificates, shall, in respect of such loan, be chargeable with a duty of eight annas per centum on the total amount of the bonds, debentures or other certificates issued by it, and such bonds, debentures or other certificates need not be stamped and shall not be chargeable with any further duty on renewal, consolidation, subdivision or otherwise.

"(2) The provisions of sub-section (1) exempting certain bonds, debentures or other certificates from being stamped and from being chargeable with certain further duty shall apply to the bonds, debentures or other certificates of all outstanding loans of the kind mentioned therein, and all such bonds, debentures or other certificates shall be valid, whether the same are stamped or not:

"Provided that nothing herein contained shall exempt the local authority which has issued such bonds, debentures or other certificates from the duty chargeable in respect thereof under the Indian Stamp Act, 1879, prior to its amendment by this Act, when such duty has not already been paid or remitted by order issued under that Act." I of 1879.

Amendment of No. 39 in Schedule I, Act I of 1879.

2. *In Schedule I, No. 39, of the said Act, after the heading "Lease" in the first column, the words "including an underlease or sublease" shall be added.*

Amendment of No. 60 and in addition of new No. 60A in Schedule I, Act I of 1879.

3. In Schedule I, No. 60, of the said Act, the word "Lease" wherever it occurs, is hereby repealed, and after the said No. 60 the following shall be added, namely:—

"60A.	**TRANSFER OF LEASE** by way of assignment and not by way of under-lease.	The same duty as a Conveyance (No. 21).

J. M. MACPHERSON,
Secretary to the Government of India

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following report of the Select Committee on the Bill to enable local authorities to borrow money for temporary emergencies was presented to the Council of the Governor General of India for the purpose of making Laws and Regulations on the 19th March, 1897 :—

We, the undersigned, Members of the Select Committee to which the Bill to enable local authorities to borrow money for temporary emergencies was referred, have considered the Bill and the papers noted in the margin, and have now the honour to submit this our Report, with the Bill as amended by us annexed thereto.

From Honorary Secretary, British Indian Association, Calcutta, dated 15th March, 1897 [Paper No. 1].
From Secretary to Government of Bengal, Municipal Department, dated 15th March, 1897 [Paper No. 2].

2. We have added a sub-clause to clause 2 to make it clear that we are not conferring any new spending power on local authorities. The object of the Bill is merely to enable the local authorities, which at present have power to spend their funds on the objects mentioned, to borrow for the like purposes. Any enlargement of spending power is, in our opinion, a matter for local legislation.

The 17th March, 1897.

No. II.

A Bill to enable local authorities to borrow money for temporary emergencies.

WHEREAS it is expedient to enable local authorities to borrow money for temporary emergencies; It is hereby enacted as follows:—

Short title, extent and commencement.

1. (*1*) This Act may be called the Local Authorities (Emergency) Loans Act, 1897.

(*2*) It extends to the whole of British India; and

(*3*) It shall come into force at once.

Power to local authorities to borrow in cases of famine or epidemic disease.

2. (*1*) Notwithstanding anything contained in the Local Authorities Loan Act, 1879, or in any other law for the time being in force, a local authority as defined in that Act may, with the previous sanction of the Governor General in Council, borrow money on the security of its funds for any of the following purposes, namely :— I of 1879.

(*a*) the giving of relief and the establishment and maintenance of relief-works in time of famine or scarcity;

(*b*) the prevention of the outbreak or spread of any dangerous epidemic disease; and

(*c*) any measures which may be connected with, or ancillary to, any of the purposes aforesaid.

(*2*) *Nothing in this section shall be deemed to authorise any local authority to borrow or spend money for any purpose for which under the law for the time being in force it is not authorized to apply its funds.*

Power to Governor General in Council to impose conditions.

3. (*1*) Every loan under the last foregoing section shall be made subject to such terms and conditions as the Governor General in Council may think fit to impose.

(*2*) In particular and without prejudice to the generality of the provisions of sub-section (*1*), the Governor General in Council may, by general or special order, prescribe—

(*a*) the terms on which the Governor General in Council or the Local Government may lend money under this Act;

(*b*) the manner of recording and enforcing the conditions on which such loans are to be made;

(*c*) the inspection of any works carried out or expenditure incurred by means of such loans;

(*d*) the instalments by which such loans are to be repaid, the interest to be charged thereon and the manner and time of repaying such loans and of paying the interest thereon; and

(*e*) the accounts to be kept in respect of such loans.

Application of section 6, Act XI, 1879

4. The provisions of sections 6 and 7 of the Local Authorities Loan Act, 1879, shall apply to the borrowing of money under this Act. XI of 1879.

Application to loans made before commencement of Act.

5. The provisions of this Act shall apply to any loan made after the first day of January, 1897, and before the commencement of this Act by, or with the sanction of, the Governor General in Council to any local authority for any of the purposes hereinbefore mentioned, and every such loan shall be deemed to have been made under this Act.

J. M. MACPHERSON,
Secretary to the Government of India.

PART VI.

Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE INDIAN COUNCILS ACTS, 1861 AND 1892 (24 & 25 VICT., CAP. 67, AND 55 & 56 VICT., CAP. 14).

The Council met at Government House on Friday, the 19th March, 1897.

PRESENT:

His Excellency the Earl of Elgin, Viceroy and Governor General of India, P.C., G.M.S.I., G.M.I.E., LL.D., *presiding*.
His Honour Sir Alexander Mackenzie, K.C.S.I., Lieutenant-Governor of Bengal.
His Excellency Sir G. S. White, G.C.I.E., K.C.B., V.C., Commander-in-Chief in India.
The Hon'ble Sir J. Westland, K.C.S.I.
The Hon'ble Sir J. Woodburn, K.C.S.I.
The Hon'ble M. D. Chalmers.
The Hon'ble Major-General Sir E. H. H. Collen, K.C.I.E.
The Hon'ble A. C. Trevor, C.S.I.
The Hon'ble M. R. Ry. P. Ananda Charlu, Rai Bahadur.
The Hon'ble Sir G. H. P. Evans, K.C.I.E.
The Hon'ble Alan Cadell, C.S.I.
The Hon'ble J. D. Rees, C.I.E.
The Hon'ble G. P. Glendinning.
The Hon'ble Nawab Amir-ud-Din Ahmad Khan, C.I.E., Bahadur, Fakharuddoulah, Chief of Loharu.
The Hon'ble Sir Lakshmishwar Singh, K.C.I.E., Maharaja Bahadur of Durbhanga.
The Hon'ble Rao Sahib Balwant Rao Bhuskute.
The Hon'ble P. Playfair, C.I.E.
The Hon'ble Rahimtula Muhammad Sayani, M.A., LL.B.
The Hon'ble Pandit Bishambar Nath.
The Hon'ble Joy Gobind Law.
The Hon'ble C. C. Stevens, C.S.I.
The Hon'ble Sir H. T. Prinsep, Kt.
The Hon'ble H. E. M. James.

QUESTION AND ANSWER.

The Hon'ble RAO SAHIB BALWANT RAO BHUSKUTE asked :—

"Considering that the three Divisional, District and Sessions Judgeships constitute the Superior Judicial Service in the Central Provinces, have the

Government of India perceived the desirability of reserving at least one of them, as in the other Provinces, for a member of the Central Provinces Bar?"

The Hon'ble SIR JOHN WOODBURN replied:—

"The Secretary of State has recently sanctioned a fourth Judgeship in the Central Provinces and the Government of India have decided that it is advisable to 'list' one of the Judgeships among the appointments thrown open to the Provincial Service as has been done with a proportion of superior judicial appointments in other Provinces. The rules permit the direct appointment of a person not in the service of Government to such high offices in special cases, as well as the promotion of an officer of the Provincial Service. For the Judgeship about to be 'listed,' a member of the Bar, who is a statutory Native of India and is considered to be the best qualified person for the appointment at present available in the Province, has been selected."

FINANCIAL STATEMENT FOR 1897-98.

The Hon'ble SIR JAMES WESTLAND introduced and explained the Financial Statement for 1897-98. He said:—

"1. I have the honour to present to the Council the Financial Statement for the year 1897-98; including in it, as usual, the closed Accounts for 1895-96, the Revised Estimates for 1896-97, and the Budget Estimates for 1897-98.

"Accounts of 1895-96.

"2. The Revised Estimates for 1895-96 closed last year with a surplus of Rx. 951,400. In the accounts this result has been improved by Rx. 582,598, the actual surplus of the year being Rx. 1,533,998.

"The main differences were (1) that the principal heads of Revenue produced Rx. 240,641 more, (2) Railways produced a better net result by Rx. 163,432, (3) the Army net Expenditure was Rx. 213,054 less. The other differences are too small to require separate mention.

"3. It has not been customary in the Financial Statements to give any detailed explanations with regard to the closed accounts of the previous year, for the simple reason that they are usually published in the fullest detail in the Annual Volume of Finance and Revenue Accounts long before the date of the Statement. In the present year they were published earlier than usual, namely, on January 9th, and it is sufficient to lay a copy on the table, and to refer Honourable Members to the analysis of them published in the *Gazette of India* last Saturday, as the Comptroller General's Appropriation Report.

"Famine Charges.

"4. Passing to the Revised Estimates for 1896-97 and the Budget Estimates for 1897-98, I call to remembrance what Sir E. Baring said in his Financial Statement for 1882-83, paragraph 92, when he referred to the Famine Insurance Policy: 'We do not profess to finance for a surplus in a year of famine. When a serious famine occurs, it is inevitable that the Expenditure of the year should be greater than the Revenue.' In commencing my Financial Statement of last year, I summed up the actual figures, up to date, of the Famine Insurance Account, but I little thought then that we were on the brink of the disaster for which, during so many years, we had been financially preparing, and that I would so soon have to announce the actual occurrence of the deficits, against which that account is the financial set-off.

"5. I may repeat here the figures of 15 years' Famine Insurance, substituting the actual figures of 1895-96 for those which were shewn in last year's Statement:—

	Rx.
1. Spent upon actual Famine Relief	320,664
2. Spent upon construction of Protective Irrigation Works	1,813,841
3 Spent upon construction of Protective Railways . .	6,550,931
4. Spent in meeting interest upon the Indian Midland and Bengal-Nagpur Railways	3,631,450
5. Charged as reduction and avoidance of debt, that is, as famine surplus	5,327,299
	17,644,185

"6. The effect of the Expenditure under headings 2, 3 and 4 is that for the present and all future famines we are so much better equipped with the means of meeting the demands arising out of scarcity, that we may reasonably hope to pass through the period of distress with far less expenditure than otherwise would have fallen upon us. In the two years 1876-77 and 1877-78 of the last great famine the Government of India spent under the head of Famine Relief Rx. 7,493,151; it will be seen that our present estimate for two years of a calamity, which is at any rate much more widely spread, is Rx. 5,606,900: and this difference is due to our far more adequate organization, of which no small part is the better equipment in the form of Railways and Canals, with which, as the Honourable Sir J. Woodburn pointed out in his speech in Council on October 15 last, we start. The figures I give of course very far from exhaust, in either case, the cost of the famine to the State; for the loss of Revenue—both ordinary Revenue and Railway Revenue—is very large indeed, and in a hundred different and smaller ways do famine and scarcity cause increases of State expenditure in all Departments.

"7. The amount under head (5), Rx. 5,327,299, though charged in our past accounts as expenditure, has really been utilized either in purchase of our own debt, or in reduction of new loans and in the construction of Productive Works. If State Book-keeping as affecting our Revenue Account, were a continuous operation like the carrying forward of a Profit and Loss Account, instead of one meant to shew the results of each twelve months' operations taken by themselves, we would have to write off the cost of the present famine against this past charge of Rx. 5,327,299 before taking any part of it as a charge against the Revenues of the current year. It is necessary to bear this in mind, because one consequence of this method of stating our accounts is that in any total of surpluses and deficits, taken over a series of years which include a famine year, the total surplus so stated is less than the actual facts by the amount of the charge for reduction and avoidance of debt.

"8. I shall have to deal separately with the effect of the famine and scarcity upon our ordinary Revenues and Expenditure; I state here only the totals of the estimated Expenditure upon direct famine relief. They amount to Rx. 1,965,700 in 1896-97 and Rx. 3,641,200 in 1897-98, total Rx. 5,606,900. The first of these figures is largely based on consideration of known actuals for part of the year, but in neither case can I put forward the figures as estimates in the sense in which we ordinarily use that term. Famine relief is administered upon certain definite principles, and on a system of test carefully laid down, and all I can say about the estimates of famine expenditure in the future, is that the figures are a summary of the best opinions which the Local Governments can give, as to the chances of the approaching spring crop, and of the crop due next autumn, and of the manner in which these crops, deficient, normal or abundant, will affect the multitudes, reckoned now by millions, who are at present compelled to seek relief at the hands of the State. In some parts of the distressed tracts the favourable

prospects of the spring crop give ground for hope, that the necessities for famine relief will in a short while shew a marked diminution. In others, there is no hope of diminution till the autumn crop is harvested, and there may be any amount of increase. No past experience can serve as a guide in the solution of these difficulties of estimating. The figures must be taken for what they are worth ; in some possible circumstances they may be found to be largely in excess of the actual expenditure ; in other possible circumstances they may be found far short of it.

"9. Up to the end of January the actual expenditure was 66 lakhs, of which about 13 were spent upon the Bandelkhand famine in the earlier part of the year, a famine of very great intensity for its small area, and so quietly and effectively managed by the Local Government that hardly anything was heard of it outside official circles. It is forgotten now in the presence of the greater calamity with which that same Government, as well as others, have to deal.

"10. The amounts charged as famine relief are independent of very large advances under the Land Improvement and Agricultural Loans Acts. But they include advances of another kind which have also been largely made by Government, namely, advances to Landholders for works to be conducted by them on Famine Relief principles for the employment of their famine-stricken tenants, in respect of which they undertake to reimburse something approaching to the actual value of the work.

"The measure of the Land Improvement and Agricultural advances due to the famine may be judged from the following figures :—

	Land Improvement and Agricultural advances.			
	1894-95.	1895-96.	1896-97. Revised.	1897-98. Budget.
	Rx.	Rx.	Rx.	Rx.
Central Provinces . .	81,100	36,800	103,000	110,000
Bengal	9,300	9,700	55,000	50,000
North-Western Provinces .	65,000	57,600	420,000	140,400
Punjab	18,700	28,400	89,000	50,000
Madras	28,000	20,400	50,000	25,000
Bombay	88,700	99,300	351,800	117,700
TOTAL .	290,800	252,200	1,068,800	493,100

"11. The operations of the Opium Department, that is to say, its usual advances for wells and for cultivation, helped very largely towards the relief of the peasantry in the distressed tracts of the North-Western Provinces and of Bengal.

"12. While speaking of the finances of famine, it is necessary to note an arrangement in which the Government of India takes part for enabling the Native Bandelkhand States to undertake the necessary expenditure for famine relief of their subjects They have been hard hit by not one but two or three successive bad seasons, and find themselves in some cases without adequate funds to meet the expenditure. The arrangement made in these cases is that His Highness the Maharaja Sindia has agreed to lend funds to the Native States in question, the Government of India becoming guarantee for the loan and taking measures to ensure its ultimate repayment.

Revised Estimate of 1896-97.

"13. The Budget Estimates of 1896-97 worked out to a surplus of Rx. 463,100. The Revised Estimates work out to a deficit of Rx. 1,986,900, but between these two figures there are so many differences of detail that it is better to set them out in a tabular form.

Estimates of 1896-97.

	Budget.	Revised.	Revised Better.	Revised Worse.
STERLING IN ENGLAND—				
Revenue . . . . . £	174,100	319,400	145,300	...
Expenditure . . . . . £	15,909,400	15,880,600	28,800	...
NET EXCHANGE ON ABOVE . . . . Rx.	11,729,900	10,270,400	1,459,500	...
	27,465,200	25,831,600	1,633,600	...
REVENUES IN INDIA—	Rx.	Rx.	Rx.	Rx.
Land Revenue	26,093,300	23,699,200	...	2,394,100
Opium	6,895,300	6,386,700	...	508,600
Salt	8,700,000	8,438,200	...	261,800
Other Principal Heads of Revenue . .	23,525,600	23,413,400	...	112,200
Departmental Receipts, including Interest and Civil Works	6,782,900	7,078,400	295,500	...
Railways	21,582,800	20,159,600	...	1,423,200
Irrigation	2,883,300	3,200,700	317,400	...
Military Works	50,000	61,100	11,100	...
Army	803,000	836,300	32,700	...
	97,316,800	93,273,600	...	4,043,200
EXPENDITURE IN INDIA—				
Direct Demands on Revenues—				
Opium	2,593,900	2,503,900	90,000	...
Other	8,470,700	8,318,700	152,000	...
Interest	—960,300	—911,300	...	49,000
Civil Departments	19,096,100	19,089,500	6,600	...
Famine Relief	75,000	1,951,200	...	1,876,200
Protective Works	523,500	47,200	476,300	...
Railways	13,781,500	13,357,400	424,100	...
Irrigation	3,201,700	3,248,900	...	47,200
Military Works and Special Defences . .	1,254,900	1,138,100	116,800	...
Civil Works	4,757,800	4,708,100	49,700	...
Army	17,480,100	17,205,700	274,400	...
	70,274,900	70,657,400	...	382,500
PROVINCIAL ADJUSTMENT—				
Deduction made for charges taken to Provincial and Local Balances	—886,400	—1,228,500	342,100	...
Surplus (+) Deficit (—) .	+463,100	—1,980,900	...	2,450,000

"14. Of the better receipts in the English account, £68,900 represent premium obtained on issue of India 2½ per cent stock, and £27,500, interest on investment of cash balance. In the account of expenditure in England there are no differences of sufficient importance to require special mention.

"15. The large difference under Exchange is due to the fact that the Budget Estimates were taken at 13·75*d.*, whereas the rate realized has been about 14·46*d.*

"16. Under Land Revenue there is a very great falling-off, due to the fact that in the districts where the crops failed it was necessary to give large suspensions of revenue. The following figures shew in what provinces the falling-off has occurred, and in the first column of the statement I have shewn the figure which, upon the examination made for the purpose of the Provincial settlements, was established, in our opinion, as the existing standard of Land Revenue receipts, apart from circumstances of famine and distress:—

	Standard.* Rx.	Budget. Rx	Revised. Rx.	Difference. Rx.
India	150,000	150,000	151,800	+1,800
Central Provinces . .	844,800	864,600	660,000	—204,600
Burma—Upper . .	812,000	797,000	635,000	—162,000
„ Lower . .	1,759,300	1,760,000	1,780,000	+20,000
Assam	614,200	614,200	609,000	— 5,200
Bengal	3,902,100	3,894,700	3,920,000	+25,300
North-Western Provinces	6,110,900	6,113,900	4,914,200	—1,199,700
Punjab . . .	2,464,000	2,457,100	2,362,200	—94,900
Madras . . .	5,380,000	5,601,700	5,207,700	—394,000
Bombay . . .	4,801,400	4,770,000	4,351,200	—418,800
	26,838,700	27,023,200	24,591,100	—2,432,100
Deduct—Portion of Land Revenue due to Irrigation .	...	929,900	891,900	—38,000
	...	26,093,300	23,699,200	—2,394,100

* These standard figures exclude "Local"; of which the only important figures are Rx. 220,000 in Madras and Rx. 15,000 in Bombay.

"The losses, it will be seen, occur in the Central Provinces, in Upper Burma, very largely in North-Western Provinces, to a small extent in Punjab, and a considerable amount in Madras and Bombay. The whole loss of Rx. 2,394,100 may be put down as caused by the scarcity.

"17. Opium shews in the above statement a falling-off of Rx. 508,600, both the Bengal prices and the export from Bombay being unfavourably affected by low prices in China. There is a slight saving on the Expenditure side in Opium, as the Budget Estimates provided for a better crop than was actually housed.

"18. The loss on Salt, Rx. 261,800, may for the most part be put down as one of the consequences of scarcity. It is chiefly during the second-half of the year that the falling-off has taken place; the receipts of the twelve months ending September 30th, 1896, were equal to the full Budget Estimate of Rx. 8,700,000.

"19. Under other Revenue heads we almost always have to report a considerable advance in the Revised Estimates over the Budget figure. They would have shewn the same progress this year were it not for the falling-off in the North-Western Provinces and in Bombay, where the following losses are recorded:—

	North-Western Provinces.	Bombay.
Stamps	22,000	34,000
Excise	125,000	60,000
Provincial Rates	104,000	33,200
Forests	16,700	34,700
TOTAL	267,700	161,900
	Rx. 429,600	

"These losses again are due to the effects of famine, and in the case of the Stamp Revenue of Bombay, still more to the stoppage of trade in consequence of the plague. The Customs Revenue is on the whole slightly better than Budget.

"20. Of the improvement under Departmental Receipts, Rx. 124,700 represents the premium received on the last loan (against which, under the same head of "Interest," there was a loss of Rx. 40,000 due by the Calcutta Port Commissioners and remitted), and Rx. 102,000 represents the increased gain on copper coinage, due to the very large issues of that coin in connection with Famine Relief Works. The gain on this coin is brought to credit as the coin passes into circulation.

"21. The next great difference requiring explanation is in the Railway Receipts. Confining ourselves to consideration of the earnings of Railways only, we have the following figures:—

	Earnings.	Working Expenses.	Net.
	Rx.	Rx.	Rx.
State Railways—			
Accounts, 1895-96	18,558,294	9,040,836	9,517,458
Budget, 1896-97	18,321,700	9,010,800	9,310,900
Revised, 1896-97	17,524,700	8,825,000	8,699,700
Guaranteed Railways—			
Accounts, 1895-96	6,255,131	2,979,893	3,275,238
Budget, 1896-97	6,330,000	3,097,000	3,233,000
Revised, 1896-97	5,670,000	3,060,000	2,610,000

"These figures give a falling-off of Rx. 611,200 on State Railways and Rx. 623,000 on Guaranteed, total Rx. 1,234,200, an amount which accounts for the differences shewn in the above statements of Rx. 1,423,200 worse on the Revenue side, and Rx. 424,100 better on the Expenditure side ; net Rx. 999,100. The lower receipts have saved us Rx. 142,000 in the payment of surplus profits, and the other Railway charges have also been less than the Budget Estimate. The principal contributors to the above losses are—

	Rx.
North-Western	140,000
Oudh and Rohilkhand	117,500
Rajputana-Malwa	252,500
Bombay, Baroda and Central India	260,000
Great Indian Peninsula	310,000

"22. The Eastern Bengal Railway, on the other hand, has gross receipts Rx. 180,000 better than Budget, owing largely to a favourable jute season.

"23. Irrigation is the only head which in a year of drought shews an improvement. The net receipts are better than Budget by Rx. 269,500, the improvement being shared between the North-Western Provinces and the Punjab.

"24. Passing to the figures on the Expenditure side, the heads Direct Demands on Revenues (other than Opium) and Civil Departments represent mostly charges regulated by sanctioned scale, and they shew the usual savings as compared with Budget. The excess expenditure under Interest is mostly a question of the distribution of this charge between ordinary debt and Railway debt. The heavy excess expenditure on Famine Relief requires no further explanation beyond what is given above. The saving on Protective Works is not a real one,—it merely means that the East Coast, including the Bezwada-Madras Railway, which is both a productive and a protective line, and which is charged to the Famine Grant when that grant is not otherwise appropriated, has this year to be transferred to the Capital Account of Railway Construction.

"25. There is a considerable saving of Rx. 274,400 under Army Expenditure. The principal items included in this are—

	Rx.
Unspent out of the special grant of Rx. 494,900 for mobilization purposes, included in Budget	120,000
Savings in Exchange Compensation Allowances in consequence of better exchange	80,800
Savings in ordnance manufactures	75,000
Other very numerous savings on the grants (net)	240,600
TOTAL	516,400

"Against this the rise in prices which set in in September has caused extra expenditure of Rx. 196,000, and excesses over established or estimated strength have caused excess charges of Rx. 46,000.

"26. The "Provincial adjustment" is better by Rx. 342,100 ; translated into non-technical language, this means that the Provincial balances bear a share of the loss of Revenue and of the Expenditure (chiefly Famine Expenditure) included in the General Account, which is larger by Rx. 342,100 than they estimated, a year ago, they would have to bear. The total Provincial and Local Balances of 31st March 1897 stand as follows :—

	Budget, 1896-97. Rx.	Revised, 1896-97. Rx.
Provincial Balance	1,437,022	1,222,549
Local Balance	1,276,221	1,144,703
TOTAL	2,713,243	2,367,252

"27. It may be well here to collect together the various items in these explanations which we have attributed to the effects of famine and scarcity—

	Rx.
Direct cost of Famine Relief	1,876,200*
Rise in prices in Army Expenditure	196,000
Loss of Revenue—	
Land Revenue	2,394,100
Salt Revenue	261,800
Other Revenues in North-Western Provinces and Bombay (excluding Stamp Revenue)	373,600
Loss of Railway Revenue (net)	1,234,200
TOTAL	6,335,900
Gain under Irrigation Revenue	269,500
NET RESULT	6,066,400

* Besides Rx. 14,500 for English Expenditure and Exchange thereon.

Of the above amount, Rx. 574,700 falls upon Provincial and Local Balances, leaving Rx. 5,491,700 to be borne by Imperial.

"Loan Operations in 1896-97.

"28. As announced in the last Financial Statement, a 3 per cent loan of four crores of rupees was offered for public tender upon June 22, and the tenders were received upon July 22. Money throughout the earlier part of the financial year was extremely cheap, the Bank rate in England being 2 per cent and in Calcutta 4 per cent from May 28 and 3 per cent from July 2. The price of paper ruled high, our 3½ per cent guaranteed loans being in April about R108-7, in May about R110-4, and June about R110-2. The loan was very largely tendered for and was placed at an average of R103-1-10½, the lowest accepted tender being R102-7, and the allotments were practically all paid up by the end of August.

"29. It will be remembered that in our conversions of 1894 we offered to those holders of paper who accepted conversion, an equivalent amount of promissory notes on which 3½ per cent interest was guaranteed up till August 1904. Those who did not accept were afterwards offered, and most of them accepted, ordinary 3½ per cent paper without any guarantee. We considered ourselves therefore in a manner bound, if favourable opportunity offered, to convert the unguaranteed 3½ per cent paper, as otherwise it would necessarily be quite as good as the guaranteed. The amount of this ordinary 3½ per cent paper was—

(1) Outstanding of 1853-54	46,760
(2) " 1893-94	3,500,000
(3) Accepted in conversions of 1894-95	2,138,190
TOTAL	5,684,950

"30. Accordingly, after ascertaining that the operation of converting the outstanding unguaranteed 3½ per cent paper into the new loan would not be regarded by the holders of the new paper as in any way interfering with them, but would indeed rather help them by increasing the amount and the marketableness of the new loan, we notified this conversion upon September 4. The success of the new loan had established for the time a high price for securities of the Government of India, and the prospects of the conversion were favourable.

"31. Rates held up, both in England and India, just long enough to enable the operation to be successfully closed. The Bank of England rate, which had stood at 2 per cent, from February 1894 was increased to 2½ per cent on September 10, 1896, and to 3 per cent upon September 24, and the rise was the signal for a depression in the value of our securities. When the final day came of tendering for conversion the amount that had been tendered came to Rx. 4,887,160, and Rx. 797,790 was left outstanding for discharge. Of this amount, Rx. 296,600 has been presented for payment up to the beginning of March.

"32. Since money hardened in Calcutta in November, the price of the new 3 per cent paper has ruled below par, but this is partly due to the comparative absence of a market, as compared with the larger bulk of the 3½ per cent paper. Our present intention at least is to persevere with the 3 per cent rate, and by our future loans to increase its amount. We have now practically only two kinds of paper on the market, *viz.*, the 3½ per cent guaranteed till August 1, 1904, and the 3 per cent guaranteed until December 31, 1916. The amounts of these two kinds of debt are at present as follow: 3½ per cent Rx. 82,754,840, besides Rx. 8,159,500 held in the Currency Reserve; 3 per cent Rx. 8,887,160, besides Rx. 2,048,650 created during the year for issue to Currency as mentioned in the next section.

"Rate of Exchange.

"33. Last year closed with a re-action from a somewhat sudden rise in the rate of exchange to $14\frac{3}{4}d.$ During April and May the rate fell from $14\frac{3}{8}d.$ to $13\frac{13}{16}d.$ In June it recovered to $14\frac{5}{32}d.$, and from then till the middle of October the rate was very steady at about $14\frac{1}{8}d.$ and $14\frac{3}{16}d.$, the Secretary of State being very successful in selling his Bills. By the middle of October we had realized that a famine was upon us, and that it would be necessary, as a first step in meeting it, to make large suspensions of revenue and large agricultural advances. We were obliged, therefore, at very short notice to ask the Secretary of State to greatly reduce his drawings. And the result was that the rate of exchange and the Bank rate of interest both very sharply rose. The second week's drawing of October was at $14\frac{7}{32}d.$; the second week's drawing of November was at $15\frac{7}{32}d.$

"34. This action on our part caused, I am afraid, grave inconvenience to mercantile circles in India; but it was not avoidable. It was only when the first ten days of October passed without bringing the desired rain, that famine was converted from a mere possibility into an almost certainty, and the area affected was so widespread that the case demanded the reservation of all our financial means. These we took the opportunity of strengthening by carrying out on December 17 a measure which had been under public discussion for over a year *viz.*, the addition of two crores to our cash balances by the investment of part of the Currency Reserve. The exact figures of this operation were the issue of ₹2,04,86,500 stock of the 3 per cent Loan of 1896-97, at the rate of the day, ₹97-10 per cent, being ₹54-6 less than the full two crores. With this transaction the tenseness of the situation passed away; but the rate of exchange on the drawings never fell below 15 pence, as the Famine expenditure and prospects compelled the Secretary of State to reduce his drawings, and there came a heavy demand for remittance in connection with the Burma rice crop.

"Budget Estimates, 1897-98.

"35. Following my previous practice of abstaining from any speculation in exchange, I have taken the rate for the Budget Estimate at the same figure which has been realized in the year 1896-97, namely, 14·46 pence. It is impossible to say how trade and exchange may be affected by the very peculiar circumstances of the coming year. Made up upon this basis, the estimates of Revenue and Expenditure work out to a deficit of Rx. 2,464,000. It will be most convenien

in explaining the details to compare them with the Budget figures of 1896-97, rather than with the altogether peculiar figures of the Revised Estimates.

"36. This comparison, made in the same form as adopted in paragraph 13 above, is as follows:—

Budget Estimates of 1897-98 compared with those of 1896-97.

	Budget, 1896-97.	Budget, 1897-98.	1897-98 Better.	1897-98 Worse.
STERLING IN ENGLAND—				
Revenue . . . . . £	174,100	173,000	. .	1,100
Expenditure . . . . . £	15,909,400	16,088,500	...	179,100
NET EXCHANGE ON ABOVE . . . . Rx.	11,729,900	10,504,200	1,225,700	...

Military Works and Special Defences . .	1,254,900	1,207,300	47,600	...
Civil Works	4,757,800	4,398,200	359,600	...
Army	17,480,100	16,968,900	511,200	...
	70,274,900	72,623,900	...	2,349,000
PROVINCIAL ADJUSTMENT	—886,400	—1,190,000	303,600	...
Surplus (+) Deficit (—) .	+463,100	—2,464,000	...	2,927,100

"37. The main increases of Expenditure in the English Account are—

(1) Increasing Interest payments which account for differences of £61,400 under Interest, and £99,100 under Railways.

(2) Increase of £37,700 under Superannuation Charges.

(3) There is an increase of £65,600 under Army Non-Effective Charges; but it is more than counterbalanced by a saving of £120,700 under Army Effective Charges, chiefly on account of Military Stores for India.

"38. The deficiency under Land Revenue is heavy, namely, Rx. 447,100, and may be explained by saying that in Upper Burma, in the Central and the North-West Provinces, and in the Punjab, we do not at present expect to receive, during the coming year, nearly the full measure of Land Revenue. The deficiency comes in the beginning of the year, and is due entirely to the failure of crops. If a prosperous harvest should ensue next October and November, we may reasonably hope for much better results than those shewn in our Estimates.

"39. Under Opium we are now suffering from the re-action which two years ago I pointed out to be inevitable. Scanty crops, and the high prices that follow

them for a time, give favourable financial results while they last, but the high prices kill the demand, and both the exports of Malwa opium fall off and smaller prices are realized upon the Bengal drug. The prospects of the coming season, looked at from the point of view of the Opium Department, are extremely favourable, but to our Budget Estimates they mean low prices realized upon the still scanty sales, and heavy outgoings in payment for the raw produce. The result is a falling-off which may be thus distributed :—

	Rx.
By lower prices realized on the Bengal sales . . .	877,500
By smaller export and lower duty in Bombay . . .	190,000

and on the Expenditure side—

By heavier payment to cultivators	60,100

" 40. Under other Revenue heads there are on the whole better results, though the influence of the famine is still shewn in a falling-off, under Excise, of Rx. 65,600, and under Provincial Rates, of Rx. 48,100.

" 41. The Departmental Receipts are expected to be somewhat better on the whole than in the Estimates of 1896-97. Post Office shews an advance of Rx. 56,600, more than covered, however, by an increased expenditure, and Telegraph shews worse results on both sides, partly because the advance in revenue has been less than expected, and partly because the rents charged to Railways for the use of wires and instruments have been reduced and it is intended to introduce certain improvements in respect of delivery of deferred messages.

" 42. Railways shew a great falling-off, as the traffic on them will be greatly affected as long as the effects of the present scarcity last. The following figures may be taken as a continuation of those stated in paragraph 21 above (Indian Accounts only) :—

Budget, 1897-98.	Earnings.	Working Expenses.	Net.
	Rx.	Rx.	Rx.
State Railways . .	18,023,400	9,027,300	8,996,100
Guaranteed Railways . .	5,740,000	3,110,000	2,630,000

" 43. On the Expenditure side the figures which require special explanation, in addition to the above remarks, are the following :—

" Direct Demands on the Revenues.—Increase Rx. 49 700. The principal item is Rx. 36,900 under Forests, which is of the nature of commercial outlay intended to bring in a good return. The Forest Department are carrying out a scheme, long planned and elaborated, which involves considerable additions to the subordinate establishments engaged in conserving and working the Forests.

" 44. Civil Departments.—Increase Rx. 212,700. Of this, the principal items are Post Office Rx. 78,400 and Telegraph Rx. 44,700, due to normal expansion of the Departments; Jails Rx. 68,400, being the estimates which the Provincial Governments make of the consequence of increase of prices of food, and of the probable temporary increase of jail population in the distressed tracts; Police Rx. 70,500, due to continued pursuance of the plans for the reform of this Department, but also in some places the result of scarcity and distress; Superannuations, Rx. 28,200, an inevitable annual increase.

" 45. The heads of Famine and Railways have already been dealt with, and as explained in dealing with the Revised Estimates, the entry of Rx. 498,500, less expenditure on protective works, merely means that we shall not, in 1897-98, obtain from the Famine Grant the aid it usually gives towards expenditure on Capital Account. In view of the amounts provided for Famine Relief, it has not been considered necessary to make special provision for any expenditure which may be entailed on the Imperial Account by the plague.

"46. Civil Works.—The less expenditure Rx. 359,600 is due to the restriction of programme by the various Local Governments enforced by the great reductions that Famine expenditure has made in their available balances.

"47. Under Army, there is on the whole a less expenditure in India by Rx. 511,200. A fuller statement of the comparison between the Estimates of 1896-97 and 1897-98 would be the following :—

		1896-97.	1897-98.	1897-98 Better.
Mobilization Grant—				
England	£	51,200	*Nil.*	51,200
India	Rx.	494,900	100,900	394,000
Ordinary Grant—				
England	£	4,357,300	4,353,400	3,900
India	Rx.	16,985,200	16,868,000	117,200

"The Mobilization Grant was a special one for 1896-97, and a comparatively small amount of expenditure under this head is admitted into the Estimates of 1897-98.

"The principal features in the differences in the ordinary portion of the Estimates are: (1) the higher prices of food necessitate an increase of Rx. 399,300 in the Estimates of 1897-98; and (2) there will be a saving of Rx. 326,000 in consequence of the application of more favourable rates of exchange to the calculation of the allowances of officers and of British soldiers. There are further numerous savings and a few increases of charge for which I refer to Part II of the Statement.

"Quinquennial Settlements of Provincial Finance.

"48. The usual quinquennial investigations and settlements of Provincial finance were made in the course of the year. Our proposals on the subject were made to the Provincial Governments at the beginning of October, before the appearance of famine; and afterwards, when famine supervened, we considered that, as the arrangements depend, not upon the figures of any one year, but upon the general standard of Revenue and Expenditure, it would be sufficient to reserve the final settlement so far as it regarded Land Revenue and Excise and one or two other heads, in the Provinces severely affected by famine, but it was better to settle all other matters than to leave them in a condition of suspense. The settlement of these standards of existing Revenue and Expenditure is the necessary condition for the exercise by Local Governments of the financial authority entrusted to them, in the same sense as the settlement of the Budget Estimates determines the plan upon which our own financial administration is to be pursued for the next twelve months.

"49. The first process in these settlements is the enquiry what is to be accepted as the proper amount of expenditure for which an assignment of Revenue is to be made. The expenditure may be stated in general language as that incurred in each province upon Civil Administration; the revenue and expenditure on account of Irrigation are also provincialized in Bengal, North-Western Provinces, and Madras, but this part of the arrangements need not be more specially referred to at present.

"50. In two tabular Statements A and B appended to this part of the Financial Statement, I set forth in detail the estimates accepted for the expenditure in 1897, and compare them with the estimates of the same kind upon which the similar settlement was made in 1892. I may mention that we have not, or we practically have not, rejected any of the existing expenditure of the Provincial

Governments as requiring to be disallowed, as we find that the increases of scale of expenditure are sufficiently moderate. The details of the comparison are as follow:—

	Net Expenditure. 1892.	1897.	Increase per cent.
	Rx.	Rx.	
Central Provinces . .	653,300	710,700	8·8
Lower Burma . . .	1,064,600	1,206,100	13·3
Assam	467,600	564,900	20·8
Bengal	2,816,700	3,125,500	10·9
North-Western Provinces .	2,215,400	2,428,700	9·6
Punjab	1,384,600	1,537,300	11·0
Madras	2,054,800	2,238,600	8·9
Bombay	2,409,500	2,544,100	5·6
TOTAL .	13,066,500	14,355,500	9·9

"It is fair to the Local Governments to notice that part of the above increase of expenditure was that which was entailed upon them by the allowances given in compensation for fall of exchange.

"51. An examination of the Revenue side of the account shewed the following results:

"The Central Provinces have been hard hit by two or three bad seasons, and they have been disappointed in the increase of revenue which they might reasonably have expected. We found it necessary to assign them a slightly higher amount than they would have got had the 1892 settlement continued in force. Their balance has been absorbed by their necessary expenditure somewhat exceeding their revenue, and their misfortunes of the current year have, quite apart from famine, entirely swept away their available resources. We reckon that we enhance their assignment by Rx. 29,200 a year; and we have also to make up a small deficit in their balance.

"52. Assam shows a fairly progressive revenue, but it is, as Sir E. Baring said in 1882, "a poor province with many wants." We find that we might, upon the present revision, reduce its assignment of Revenue by a small amount, say Rx. 11,400. But we have adjudged it better to leave the Province this amount of surplus.

"53. Burma (that is, in the present connection, Lower Burma only) is a young and rapidly progressive province. Its revenue (mainly its Land Revenue) increased during the past quinquennium by 13·9 per cent., and its expenditure has increased as above shown by 13·3 per cent. The above figures are independent of its Railway revenue, the Burma Railways having been, with a slight reservation, Provincial up till now. The Railway part of the 1892 settlement has been very profitable to the Local Government, which has maintained very high, though decreasing, balances throughout the five years. It finishes the present contract with a balance of Rx. 294,300. We have thought it desirable for the present to deprovincialize the Railways as they have now been made over to a Company, and some questions remain to be settled regarding their future administration; but otherwise Burma is only a little worse off (say Rx. 9,000 a year) than if the 1892 settlement had continued in force.

"54. The Chief Commissioner—or in future, Lieutenant-Governor—takes over now provincial responsibility for Upper Burma in the same way as for Lower. The Estimate of Expenditure is shewn in the penultimate column of Table B, and sufficient Revenue has been assigned to meet it. I am afraid that the first effect

of this will be to use up part of the high balance with which the Chief Commissioner starts under his new settlement, in paying for famine relief in his new province, and also possibly in meeting some temporary loss of Revenue in it.

"55. The Punjab is a politically important province, and it has shown during the last quinquennium only a moderate expansion of Revenue. The consequence is that its resources under the 1892 settlement have been found rather too narrow for the demands of its expenditure, and it has been obliged to reduce its Public Works grants somewhat below the needs of the province. Further, the failure of Revenue in the current year has reduced its balance below the authorized minimum. We find that we place it in a fair financial position if we concede to it, in addition to the Revenue assigned in 1892, an allowance about equal to the expenditure imposed on it by exchange compensation; and, when the famine account is closed, we shall have to make to it also, as to the Central Provinces, a grant in recoupment of its exhausted balances.

"56. In the provinces with which I have as yet been dealing, we did not expect and we did not wish, to make a profit to the general account by reducing the amount of Revenue assigned to the Local Governments. Our examination satisfied us that their expenditure was already on a sufficiently limited scale, and that the whole, or nearly the whole, of the revenues assigned to them could be properly left at their disposal.

"57. But we have also in the case of these provinces made another arrangement to their advantage. The revenues assigned for Provincial use are, as is well known, certain shares of the various heads of Revenue. These shares in the larger Provinces of Bengal, North-Western Provinces and Madras are about equal, on the whole, to their net expenditure; but in the smaller ones, where the expenditure naturally bears a larger proportion to the revenue, they require to be supplemented by a grant which under present arrangements is a fixed amount. While the revenues increase, this fixed amount does not, and it thus results that, whereas in the big provinces, if the revenue increases by five per cent, the Local Governments have the power (temporarily or permanently, as the case may be) of increasing their expenditure by five per cent, yet in the smaller provinces an increase of revenue by five per cent only permits an increase of expenditure by, say, three per cent. This is the reverse of what ought to be, for the irresistible demands in the new provinces are proportionally greater than in the old ones. We have therefore in the newer provinces enhanced the shares of some of the assigned revenues, by reducing *per contra* the fixed amounts granted in addition to the variable shares. In this way we have given the Punjab ·4 and the Central Provinces ·5, of its Land Revenue, instead of ·25 only. In Burma, which, with Upper Burma now added, has a very large expenditure as compared with its revenue, and also probably considerable demands, and from which we have for the present withdrawn the Railway Revenue, we have found it necessary, in pursuance of this purpose, to raise the share of Land Revenue as high as two-thirds, and we have given it also half its Excise instead of one-quarter only.

"58. The state of Provincial finance in the North-Western Provinces had begun to give us anxiety, even before the outbreak of famine. Sir E. Baring in 1882 pronounced (Financial Statement of 1882, paragrapn 58), as the result of an enquiry made under his orders, that nowhere in India is a reduction of taxation more required than in the North-Western Provinces and Oudh; and he took certain measures for that reduction which, for reasons fully explained in this Council at the time, were partly reversed in 1889. It is therefore perhaps not unnatural that the Revenue of these Provinces has shewn very little expansiveness. There is a certain advance in its Land Revenue as districts come under

resettlement, but it is rather backward, or at any rate non-progressive, in respect of Excise and other Revenue. At all events its revenue from 1892 to 1897 has advanced only about 2 per cent,—much less than that of any other Province.

"59. Now, the settlement of 1892 left the North-Western Provinces with less of revenue than was necessary for its standard of expenditure. The reasons for this I need not mention, but it was intended that five lakhs of its admitted expenditure should be met by reduction of balance.

"60. There is also one feature peculiar to the North-Western Provinces Provincial account. It is dependent to the extent of 30 or 35 lakhs of rupees a year upon the net revenue of irrigation canals. Now, one year, very recently, there were unusually good cold weather rains, and the people did not want water from the canals; the result was that the Government of the North-Western Provinces lost 20 lakhs upon its Irrigation account, and I need not say that no Provincial account can stand a loss of that magnitude. True, in this last year of drought, the 20 lakhs have come back to it in the Irrigation account, but the losses under Land Revenue and other heads are so enormous as to swamp this particular gain, and the North-Western Provinces account finishes this year, without reckoning any famine charges, with a debtor balance of Rx. 200,800 which of course we have to make up by a grant out of Imperial. Grants like this, I may remark, are not shown on the face of our accounts. they are made by redistributing the Land Revenue between the Imperial and Provincial columns.

"61. We have carefully reviewed the requirements of the Province in the way of expenditure, and we have come to the conclusion that we must enhance its assignment by nearly as much again as the five lakhs by which the assignment of 1892 fell short of the admitted standard of expenditure.

"62. We have, in addition to this, made it a grant of four lakhs for the year 1897-98 to enable the Lieutenant-Governor to establish his District Funds on a financially independent basis; this step, which has been long ago accomplished in every other Province in India, not having yet been carried out in the North-Western Provinces.

"63. We come now to the important and wealthy maritime Provinces of Bengal, Madras and Bombay, towards which the commercial wealth and the industrial progress of India tend to accumulate. To them we naturally look for obtaining the means for that redistribution of resources which, to again quote Sir E. Baring's Financial Statement of 1882, is one of the objects of the quinquennial revisions. 'It is indeed obvious,' he said, 'that in view of the manifold demands on the Imperial treasury, and the necessity for affording relief to provinces whose means are straitened, the Government of India cannot forego all its claims on the increments of revenue which arise from the growing wealth and prosperity of the country.' The mention of the balances of the Provincial Account in these three great provinces, from 31st March 1892 onwards, will show that they may reasonably expect, with a slightly smaller assignment of revenue than at present, to continue their past career of financial prosperity. The Balances in Bengal were, in lakhs of rupees, 23½, 22½, 26, 43, 58; in Madras 42, 26, 29, 38½, 43; in Bombay 41, 38, 40, 30, 40; and since in each case the Local Government was at liberty to estimate for the expenditure of all excess over 20 lakhs, it may be taken that their present scale of expenditure is not the result of any specially enforced economy.

"64. We have carefully examined both the revenue and the expenditure of each of these Provinces, and we propose to allow in the present assignment for

the actually existing scale of expenditure. The following figures compare the rate of growth of revenue with that of growth of expenditure :—

	Increase of Revenue from 1892 to 1897.	Increase of Expenditure now allowed.
Bengal	9·6 per cent	10·9 per cent
Madras	14·9 per cent	8·9 per cent
Bombay	10·0 per cent	5·6 per cent

"In stating the increase of Revenue for Bengal, the Railway Revenue, alluded to below, is left out of account; and the figures for Madras and Bombay are based on the estimates made by the Government of India before the diminution caused by famine and plague.

"65. To a small extent in Madras, namely, in respect of its Land Revenue, the assignment of revenue is provisional and will be settled next cold weather. In the case of Bombay, we have had to postpone the final settlement also of Excise, Stamps, and Forests. But even with these heads remaining open for final determination next year, the settlement is sufficiently complete to be the basis of the exercise by the Local Governments of Provincial financial powers.

"66. As regards the effect on the Provincial accounts as compared with that of a continuation of the present assignments, the facts are—

(1) In Bengal we resume a special grant which fluctuated with the earnings of the Eastern Bengal Railway (which is not under Provincial Administration), and we give Rx. 269,400 in lieu of it. The Railway grant was given in 1892 as the equivalent of Rx. 320,000, though, if renewed now on the same terms, it would be worth to the Lieutenant-Governor very much more.

(2) In Madras the assignment is less than that of the 1892 settlement by Rx. 98,200 or Rx. 138,200, according as the Local Government's estimate of Land Revenue or that of the Government of India is ultimately adopted.

(3) In Bombay it is quite impossible to say what the difference is. If the Revenue in the future is to be as seriously reduced as the Government of Bombay estimates, the new settlement is practically a continuation of the old one. But we hope, when present troubles are over, to find the standard of Revenue much higher than the Government of Bombay puts it.

"67. It is necessary to add a few words as to the manner in which the Provincial accounts are affected by the famine expenditure. The established policy in such cases is that Local Funds must first be called upon to bear all the expenditure they reasonably can bear, and to 'direct their whole resources, subject only to the maintenance of absolutely necessary works in non-affected tracts, to afford relief;' thereafter the Local Governments must meet the demands upon them out of their Provincial balances. At the point where these are reduced below the standard required as working balances for the Provincial financial administrations, the Imperial Government has to step in, and bear the rest of the burden which, in the case of a great famine, is necessarily by far the largest share of it.

"68. In the Central and North-Western Provinces the Provincial balances, as already explained, are more than exhausted by reason of failure of revenue. In these cases not only will Imperial have to bear all the charges of famine, but it will have to make up, in addition, the deficit in the Provincial balance.

"69. Bombay is nearly as bad—its Provincial account has been hard hit by loss of revenue. It can bear, in Provincial and in Local account, only a few lakhs out of its famine expenditure, and all the rest has to be borne by Imperial.

" 70. Madras is fortunately only slightly affected by famine, and its revenues have suffered very little. Between its Provincial and its Local balances it will be able to bear the whole, or nearly the whole, of its famine expenditure.

" 71. In Upper Burma the famine expenditure, which is only 6 or 7 lakhs in each year, will be charged to Imperial this year and to Provincial next.

" 72. In Bengal only a small area is affected, and the general condition of the Province, as reflected in its Revenue Account, is one of prosperity. Its high balance which, if it had no famine expenditure to bear, would, on 31st March 1897, stand at Rx. 595,700, will be largely dispersed during this and next year by heavy famine expenditure. This sounds a little harder upon Bengal than it really is, for, as a matter of fact, this high balance is the produce, not of any Provincial revenues in the ordinary sense, but of the Imperial grant out of Railway Revenues, not under Bengal administration, which three successive good jute seasons have so enhanced as to give the province a profit, in the three last years, of Rx. 353,500. But I am afraid that this consideration will afford little consolation to His Honour the Lieutenant-Governor for the financial misfortune which has overtaken both his finance and mine.

" 73. As the Estimates stand, after all the charges for famine are thus distributed, the Provincial balances are shewn upon 31st March 1898 as follows :—

	Rx.		Rx.
Central Provinces . .	*Nil.*	North-Western Provinces	*Nil.*
Burma . . .	140,900	Punjab . . .	36,100
Assam	85,800	Madras . . .	100,000
Bengal . . .	100,000	Bombay . . .	49,500

These will require some adjustment to the necessities of the several provinces, when we come to the end of the year; for the provinces cannot be left without a safe working balance at the very least. What this adjustment will be it is unnecessary now to discuss, for, as already explained, the estimates of famine outlay, though the best we can make, are very far from trustworthy, and the actual expenditure is determined by circumstances quite outside any control of ours. We therefore must wait until we can approximately close the account of the famine, and of the immediate disasters to Revenue which it brings in its train.

" Railway Construction.

" 74. In the last Financial Statement I mentioned that the question of Railway Extension was under the general consideration of the Government. A programme involving considerable outlay was explained to the Council by His Excellency the Viceroy on the Budget discussion on March 26th; and the question had been carefully considered in correspondence with the Secretary of State, how to raise the necessary money for the outlay, as the amount required went beyond the capacity of the Indian Money Market.

" 75. At the beginning of the year the Secretary of State gave formal approval to a programme of Railway Construction, either direct by Government or by Companies acting under guarantee of the Government, which covered about Rx. 28,000,000 of Railway expenditure to be spread over three years, of which 1896-97 was the first. For this 28 crores of expenditure we were to raise in India as much money as we thought we could conveniently borrow, and the rest was to be raised in England, either directly by the Secretary of State or by Companies acting under agreements with him. But the amount of 28 crores thus arranged for does not include the transactions of certain Companies whose relations with Government do not involve a direct guarantee by the latter, and which work under special terms (like the Bengal and North-Western Railway) or under what are

known as Branch Line terms. Nor does it include certain small transactions on Provincial account which are charged to Revenue.

" 76. The operations thus fall into three categories, namely,—

I.—State Railway Construction, for which money is found by Government aided by capital or debentures raised by two Companies,—the East Indian Railway Company and the Assam-Bengal Railway Company.

II.—Construction by Companies, under contract with Government, out of funds raised by the Companies, but supplemented in two cases by funds advanced at interest by the Government.

III.—Construction by Companies out of their own funds and outside the Government Accounts; and also construction by Branch Line Companies.

" There is a fourth category, *viz.*, the old Guaranteed Companies; and though some negotiations are pending in respect of new capital construction by them, they are not further alluded to in these figures.

" 77. These three categories account respectively for the following expenditure :—

	Revised, 1896-97.	Budget, 1897-98.
	Rx.	Rx.
First Category	5,767,700	6,700,000
Second Category	2,990,600	3,430,000
Total on Government Account .	8,758,300	10,130,000
Third Category	2,470,200	3,283,800
TOTAL .	11,228,500	13,413,800

" These figures, it should be remembered, include expenditure in England as well as expenditure in India.

"(a) First Category.

" 78. The estimated expenditure of the two years, falling under the first category, is as follows :—

	Revised, 1896-97.	Budget, 1897-98.
Money available by—	Rx.	Rx.
Grant under 48.—State Railway Construction .	3,819,900	5,838,600
East Indian Railway Company's Debentures .	1,437,000	662,100
Assam-Bengal Company's Capital and Debentures	510,800	199,300
TOTAL .	5,767,700	6,700,000

" The East Indian and Assam-Bengal are State Railways in the hands of Companies who have power to raise debentures, and in the case of the Assam-Bengal Company share capital also, in sterling, for construction purposes. The capital and debentures raised by these Companies are of course appropriated to their particular lines; but to the extent to which the raising of the money is in advance of its expenditure, the capital so raised diminishes for the time the total amount of construction for which money has to be charged direct on the Government Account of Capital Construction.

"79. The above money has been appropriated to the following construction, in which I have omitted separate specification of the smaller items :—

	Rx.	Rx.
State Agency—Open Lines—		
North-Western	435,000	37,700
Eastern Bengal	448,900	322,500
Other Lines	76,000	73,200
State Agency—Construction—		
Burma	166,000	...
East Coast	292,800	65,000
Godaveri Bridge	...	185,000
Rae Bareli-Benares	257,100	432,500
Mari-Attock	373,700	300,000
Mushkaf-Bolan	210,200	...
Kotri-Rohri	420,100	211,000
Bezwada-Madras	841,800	800,000
Southern Punjab	...	222,300
Other Lines	92,500	220,100
Companies' Agency—Open Lines—		
East Indian	680,000	1,200,000
Tirhoot	24,100	110,000
Other Lines	59,400	135,500
Companies' Agency—Construction—		
Assam-Bengal	1,170,600	1,330,000
Tirhoot Extensions	220,000	600,000
Other Lines	—500	...
Unappropriated	...	455,200
TOTAL	5,767,700	6,700,000

"80. The following is a statement of the principal items of expenditure included in this list :—

Eastern Bengal.—1896-97; Doubling of the line north of Ranaghat. 1897-98; Additional rolling-stock.

Burma.—This line was transferred to a Company, that is, to the second category, from September 1, 1896, and the further expenditure after that date is shewn there.

East Coast.—Is open for traffic from Bezwada to Cuttack, except the Godaveri Bridge.

Godaveri Bridge.—A commencement is being made of this work, which is to cost about 55 lakhs and will take two years to construct.

Rae Bareli-Benares.—The expenditure shewn will complete the line and open it for traffic.

Mari-Attock.—Will be approaching completion at end of 1897-98.

Mushkaf-Bolan.—Finished, including double line on the 1 in 25 gradients.

Kotri-Rohri.—1896-97; Open for traffic, excluding the Indus Bridge at Kotri. 1897-98; The Bridge will be completed.

Bezwada-Madras.—Will be approaching completion at the end of 1897-98.

Southern Punjab.—The expenditure is for the provision of rolling-stock, which falls upon the Government.

East Indian.—The expenditure is upon the Mogul-Sarai to Gya Branch, and for additional rolling-stock.

Assam-Bengal.—Open from Chittagong to Badarpore, and for 75 miles from Gauhati. The expenditure is chiefly on the hill section and on the northern section.

"(b) Second Category.

"81. The expenditure by Companies under contract with Government, other than the two above specified, are—

	Revised, 1896-97.	Budget, 1897-98.
Companies' expenditure on the Government Accounts—	Rx.	Rx.
Burma	535,400	771,000
Bengal-Nagpur	715,200	1,190,400
Ditto (*a*)	842,500	938,000
Indian Midland	438,500	21,600
Ditto (*a*)	239,900	236,500
Bengal Central, Lucknow-Bareilly, Mysore, Southern Mahratta	219,100	272,500
TOTAL	2,990,600	3,430,000

(*a*) These are advances by the Government; the present arrangement in respect of the extensions of these two Railways being that the funds for expenditure in India are advanced by the Government.

"82. The following is a statement of the principal items :—

Burma.—The Mandalay-Kunlôn extension, of which 80 miles will be nearly ready at end of 1897-98 : also additional rolling-stock.

Bengal-Nagpur.—Construction is proceeding on the three branches, Sini to Midnapur, Midnapur to Cuttack, and Midnapur to Howrah. The bridging is very heavy.

Indian Midland.—The Sagar-Katni branch, to be opened by end of 1897-98.

"(c) Third Category.

"83. The expenditure under the third category is as follows :—

	Revised, 1896-97.	Budget, 1897-98.
Companies' expenditure outside the Government Accounts and Branch Line Companies—	Rx.	Rx.
Bengal and North-Western	612,700	806,000
South Behar	110,000	326,500
Southern Punjab	1,295,200	724,600
Tapti Valley	94,000	850,000
Smaller Branch Lines	358,300	576,700
TOTAL	2,470,200	3,283,800

"84. The following are the principal items of expenditure :—

Bengal and North-Western.—The Ganges-Gogra Doab branch lines, and other minor extensions, of which 250 miles will be opened by end of 1897-98. The Gogra Bridge at Bahramghât, also to be opened by end of 1897-98. The Gogra Bridge at Tartipur only commenced.

South Behar.—Approaching completion by end of 1897-98.

Southern Punjab.—Expected to be opened about October or November 1897.

Tapti Valley.—Commenced.

" Remittance and Debt.

" 85. The following account shews in a shortened form the requirements of the Secretary of State ; the figures are drawn up so as to shew separately the transactions on account of Government, and the transactions arising out of the operations of Railway Companies :—

	Revised, 1896-97. £	Budget, 1897-98. £
Requirements on Government Account—		
Excess of expenditure on Revenue Account	15,561,200	15,915,500
Expenditure not charged to Revenue	1,095,500	1,083,100
Net payments on Remittance Accounts, etc.	44,100	226,600
Total Requirements	16,700,800	17,225,200
Transactions of Railway Companies—		
Net receipts on account of Capital	3,877,200	2,455,500
Payments for Stores, etc.	2,136,700	3,273,700
Net Receipts	1,740,500	...
Net Outgoings	...	818,200
Net Funds required	14,960,300	18,043,400

" 86. The following figures shew the manner in which the above requirements have been or are to be financed :—

	Revised, 1896-97. £	Budget, 1897-98. £
By Council Bills	15,300,000	13,000,000
By addition to Permanent Debt	81,200	3,500,000
Temporary Debt—		
Reduction	—1,000,000	...
Addition	...	1,000,000
By reduction of Cash Balance	579,100	543,400
	14,960,300	18,043,400

" 87. It will be seen that Railway Companies took advantage of cheap money to raise a large amount of capital during 1896-97, and the amount provided for in the Budget was enhanced by a new arrangement made in the course of the year for the transfer of the Burma Railways to a Company : these receipts on Capital Account enabled the Secretary of State not only to meet with ease the reduction imposed on his drawings and alluded to in paragraph 33 above, but also to pay off a million of temporary debt without renewing it.

" The transaction in permanent debt in 1896-97 was the raising of a new loan, India 2½ per cent stock £2,400,000, which was used to pay off debentures nearly equal in amount.

" 88. For next year the requirements of the Secretary of State are considerably enhanced, as he has now to meet heavy charges of the Railway Companies

against the capital accumulated in 1896-97. On the other hand, our means of meeting his drawings in India are greatly limited, both by reason of the adverse circumstances of the year in respect of famine expenditure and by reason of the heavy Railway programme of expenditure. This last, as already fully explained, includes not only an unusually large amount of Railway construction on Government account, but also heavy outlay of Railway Companies, partly against these same receipts of Capital in last year's account.

"89. We intend to supplement our resources in India by borrowing four crores of rupees; but as will be seen from the Ways and Means Account in India in Part II of this Statement, we estimate that we will not be able, even with this, to meet more than £13,000,000 of drawings during the year.

"90. The Secretary of State is therefore obliged to have recourse to borrowing, and his present intention is to raise £3,500,000 of permanent debt, besides restoring the £1,000,000 by which in the current year he has diminished the temporary debt.

"91. These announcements of the amounts of Council Bill drawings and of debt to be raised are made with the usual reservation of entire liberty to the Secretary of State to vary the amounts as he may find occasion.

"92. Before passing from this subject I note that the year 1896-97 is remarkable as being the first in which the Government of India have secured for themselves the full benefit of the general reduction in the rate of interest. For the first time India sterling stock has been raised in England at 2½ per cent, and Indian rupee debt has been raised at 3 per cent, a premium having been obtained in each case. Moreover, we have also, in the contract for the transfer of the Burma Railways to a Company, been able for the first time to make the arrangements on the basis of a 2½ per cent guarantee.

"Conclusion.

"93. I concluded my statement last year with expressing the view that our financial prospects were 'now very much more hopeful;' although I 'refrained from any prophecies as to the future.' Our prospects are for the present marred by the occurrence of widespread famine, and of pestilence which is as yet confined within a narrow area. I can only now express the hope that a year hence these disasters will have passed away; and that as the deficits I am now obliged to declare are certainly much smaller than the losses due to famine and scarcity, we shall, when relieved from these misfortunes, resume that financial progress which they have interrupted."

LOCAL AUTHORITIES (EMERGENCY) LOANS BILL.

The Hon'ble SIR JAMES WESTLAND presented the Report of the Select Committee on the Bill to enable local authorities to borrow money for temporary emergencies. He said:—"Hon'ble Members will see that this Bill has returned to the Council with an additional clause added to it. This clause makes quite clear the limits within which the Government from the first desired that the Bill should work. It is believed that the insertion of this clause will make the Bill acceptable to Hon'ble Members of Council."

BHOPAL COINAGE BILL.

The Hon'ble SIR JAMES WESTLAND moved that the Bill to facilitate the introduction as legal tender in Bhopal of current silver coin of the Government of India be taken into consideration.

The motion was put and agreed to.

The Hon'ble SIR JAMES WESTLAND moved that the Bill be passed.

The motion was put and agreed to.

INDIAN STAMP ACT, 1879, AMENDMENT BILL.

The Hon'ble SIR JAMES WESTLAND presented the Report of the Select Committee on the Bill to amend the Indian Stamp Act, 1879.

The Council adjourned to Friday, the 26th March, 1897.

J. M. MACPHERSON,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 19th March, 1897.

SUPPLEMENT TO

The Gazette of India.

No. 12.] CALCUTTA, SATURDAY, MARCH 20, 1897.

OFFICIAL PAPERS.

A SUPPLEMENT *to the* GAZETTE OF INDIA *will be published from time to time, containing such Official Papers and information as the Government of India may deem to be of interest to the Public, and such as may usefully be made known. The Debates of the Legislative Council of His Excellency the Governor General will in future be published in* PART VI *of the* GAZETTE.

Non-Subscribers to the GAZETTE *may receive the* SUPPLEMENT *separately on a payment of five Rupees per annum if delivered in Calcutta, or eight Rupees if sent by Post. The* SUPPLEMENT *and* PART VI *of the* GAZETTE *can also be subscribed for separately on a payment of Rupees six per annum if delivered in Calcutta or Rupees nine if sent by Post.*

No Official Orders or Notifications, the Publication of which in the GAZETTE OF INDIA *is required by Law, or which it has been customary to publish in the* CALCUTTA GAZETTE, *will be included in the* SUPPLEMENT. *For such Orders and Notifications the body of the* GAZETTE *must be looked to.*

FINANCIAL STATEMENT FOR 1897-98.

PART I.

GENERAL REVIEW.

1. I have the honour to present to the Council the Financial Statement for the year 1897-98; including in it, as usual, the closed Accounts for 1895-96, the Revised Estimates for 1896-97, and the Budget Estimates for 1897-98.

Accounts of 1895-96.

2. The Revised Estimates for 1895-96 closed last year with a surplus of Rx. 951,400. In the accounts this result has been improved by Rx. 582,598, the actual surplus of the year being Rx. 1,533,998.

The main differences were (1) that the principal heads of Revenue produced Rx. 240,641 more, (2) Railways produced a better net result by Rx. 163,432, (3) the Army net Expenditure was Rx. 213,054 less. The other differences are too small to require separate mention.

3. It has not been customary in the Financial Statements to give any detailed explanations with regard to the closed accounts of the previous year, for the simple reason that they are usually published in the fullest detail in the Annual Volume of Finance and Revenue Accounts long before the date of the Statement. In the present year they were published earlier than usual, namely, on January 9th, and it is sufficient to lay a copy on the table, and to refer Honourable Members to the analysis of them published in the *Gazette of India* last Saturday, as the Comptroller General's Appropriation Report.

Famine Charges.

4. Passing to the Revised Estimates for 1896-97 and the Budget Estimates for 1897-98, I call to remembrance what Sir E. Baring said in his Financial Statement for 1882-83, paragraph 92, when he referred to the Famine Insurance Policy: "We do not profess to finance for a surplus in a year of famine. When a serious famine occurs, it is inevitable that the Expenditure of the year should be greater than the Revenue." In commencing my Financial Statement of last year, I summed up the actual figures, up to date, of the Famine Insurance Account, but I little thought then that we were on the brink of the disaster for which, during so many years, we had been financially preparing, and that I would so soon have to announce the actual occurrence of the deficits, against which that account is the financial set-off.

5. I may repeat here the figures of 15 years' Famine Insurance, substituting the actual figures of 1895-96 for those which were shewn in last year's Statement:—

	Rx.
1. Spent upon actual Famine Relief	320,664
2. Spent upon construction of Protective Irrigation Works	1,813,841
3 Spent upon construction of Protective Railways . .	6,550,931
4. Spent in meeting interest upon the Indian Midland and Bengal-Nagpur Railways	3,631,450
5. Charged as reduction and avoidance of debt, that is, as famine surplus	5,327,299
	17,644,185

6. The effect of the Expenditure under headings 2, 3 and 4 is that for the present and all future famines we are so much better equipped with the means of meeting the demands arising out of scarcity, that we may reasonably hope to pass through the period of distress with far less expenditure than otherwise would have fallen upon us. In the two years 1876-77 and 1877-78 of the last great famine the Government of India spent under the head of Famine Relief Rx. 7,493,151; it will be seen that our present estimate for two years of a calamity, which is at any rate much more widely spread, is Rx. 5,606,900: and this difference is due to our far more adequate organization, of which no small part is the better equipment in the form of Railways and Canals, with which, as the Honourable Sir J. Woodburn pointed out in his speech in Council on October 15 last, we start. The figures I give of course very far from exhaust, in either case, the cost of the famine to the State; for the loss of Revenue—both ordinary Revenue and Railway Revenue—is very large indeed, and in a hundred different and smaller ways do famine and scarcity cause increases of State expenditure in all Departments.

7. The amount under head (5), Rx. 5,327,299, though charged in our past accounts as expenditure, has really been utilized either in purchase of our own debt, or in reduction of new loans and in the construction of Productive Works. If State Book-keeping as affecting our Revenue Account, were a continuous operation like the carrying forward of a Profit and Loss Account, instead of one meant to shew the results of each twelve months' operations taken by themselves, we would have to write off the cost of the present famine against this past charge of Rx. 5,327,299 before taking any part of it as a charge against the Revenues of the current year. It is necessary to bear this in mind, because one consequence of this method of stating our accounts is that in any total of surpluses and deficits, taken over a series of years which include a famine year, the total surplus so stated is less than the actual facts by the amount of the charge for reduction and avoidance of debt.

8. I shall have to deal separately with the effect of the famine and scarcity upon our ordinary Revenues and Expenditure; I state here only the totals of the estimated Expenditure upon direct famine relief. They amount to Rx. 1,965,700 in 1896-97 and Rx. 3,641,200 in 1897-98, total Rx. 5,606,900. The first of these figures is largely based on consideration of known actuals for part of the year, but in neither case can I put forward the figures as estimates in the sense in which we ordinarily use that term. Famine relief is administered upon certain definite principles, and on a system of test carefully laid down, and all I can say about the estimates of famine expenditure in the future, is that the figures are a summary of the best opinions which the Local Governments can give, as to the chances of the approaching spring crop, and of the crop due next autumn, and of the manner in which these crops, deficient, normal or abundant, will affect the multitudes, reckoned now by millions, who are at present compelled to seek relief at the hands of the State. In some parts of the distressed tracts the favourable prospects of the spring crop give ground for hope, that the necessities for famine relief will in a short while shew a marked diminution. In others, there is no hope of diminution till the autumn crop is harvested, and there may be any amount of increase. No past experience can serve as a guide in the solution of these difficulties of estimating. The figures must be taken for what they are worth; in some possible circumstances they may be found to be largely in excess of the actual expenditure; in other possible circumstances they may be found far

about 13 were spent upon [illegible] January the actual expenditure was 66 lakhs, of which year, a famine of very great intensity for its small area, and so quietly and

effectively managed by the Local Government that hardly anything was heard of it outside official circles. It is forgotten now in the presence of the greater calamity with which that same Government, as well as others, have to deal.

10. The amounts charged as famine relief are independent of very large advances under the Land Improvement and Agricultural Loans Acts. But they include advances of another kind which have also been largely made by Government, namely, advances to Landholders for works to be conducted by them on Famine Relief principles for the employment of their famine-stricken tenants, in respect of which they undertake to reimburse something approaching to the actual value of the work.

The measure of the Land Improvement and Agricultural advances due to the famine may be judged from the following figures :—

	Land Improvement and Agricultural advances.			
	1894-95.	1895-96.	1896-97, Revised.	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.
Central Provinces . .	81,100	36,800	103,000	110,000
Bengal	9,300	9,700	55,000	50,000
North-Western Provinces .	65,000	57,600	420,000	140,400
Punjab	18,700	28,400	89,000	50,000
Madras	28,000	20,400	50,000	25,000
Bombay	88,700	99,300	351,800	117,700
TOTAL .	290,800	252,200	1,068,800	493,100

11. The operations of the Opium Department, that is to say, its usual advances for wells and for cultivation, helped very largely towards the relief of the peasantry in the distressed tracts of the North-Western Provinces and of Bengal.

12. While speaking of the finances of famine, it is necessary to note an arrangement in which the Government of India takes part for enabling the Native Bandelkhand States to undertake the necessary expenditure for famine relief of their subjects. They have been hard hit by not one but two or three successive bad seasons, and find themselves in some cases without adequate funds to meet the expenditure. The arrangement made in these cases is that His Highness the Maharaja Sindia has agreed to lend funds to the Native States in question, the Government of India becoming guarantee for the loan and taking measures to ensure its ultimate repayment.

Revised Estimate of 1896-97.

13. The Budget Estimates of 1896-97 worked out to a surplus of Rx. 463,100. The Revised Estimates work out to a deficit of Rx. 1,986,900, but between these two figures there are so many differences of detail that it is better to set them out in a tabular form.

Estimates of 1896-97.

	Budget.	Revised.	Revised Better.	Revised Worse.
STERLING IN ENGLAND—				
Revenue . . . . . £	174,100	319,400	145,300	...

	70,274,900	70,057,400	...	382,500
PROVINCIAL ADJUSTMENT—				
Deduction made for charges taken to Provincial and Local Balances	—886,400	—1,228,500	342,100	...
Surplus (+) Deficit (—) .	+103,100	—1,986,900	...	2,450,000

14. Of the better receipts in the English account, £68,900 represent premium obtained on issue of India 2½ per cent stock, and £27,500, interest on investment of cash balance. In the account of expenditure in England there are no differences of sufficient importance to require special mention.

15. The large difference under Exchange is due to the fact that the Budget Estimates were taken at 13·75*d.*, whereas the rate realized has been about 14·46*d.*

16. Under Land Revenue there is a very great falling-off, due to the fact that in the districts where the crops failed it was necessary to give large suspensions of revenue. The following figures shew in what provinces the falling-off has occurred, and in the first column of the statement I have shewn the figure which, upon the examination made for the purpose of the Provincial settlements, was established, in our opinion, as the existing standard of Land Revenue receipts, apart from circumstances of famine and distress:—

	Standard.* Rx.	Budget. Rx	Revised. Rx.	Difference. Rx.
India	150,000	150,000	151,800	+1,800
Central Provinces . .	844,800	864,600	660,000	—204,600
Burma—Upper . .	812,000	797,000	635,000	—162,000
„ Lower . .	1,759,300	1,760,000	1,780,000	+20,000
Assam	614,200	614,200	609,000	—5,200
Bengal	3,902,100	3,894,700	3,920,000	+25,300
North-Western Provinces	6,110,900	6,113,900	4,914,200	—1,199,700
Punjab . . .	2,464,000	2,457,100	2,362,200	—94,900
Madras . . .	5,380,000	5,601,700	5,207,700	—394,000
Bombay . . .	4,801,400	4,770,000	4,351,200	—418,800
	26,838,700	27,023,200	24,591,100	—2,432,100
Deduct—Portion of Land Revenue due to Irrigation .	...	929,900	891,900	—38,000
	...	26,093,300	23,699,200	—2,394,100

* These standard figures exclude "Local"; of which the only important figures are Rx. 220,000 in Madras and Rx. 15,000 in Bombay.

The losses, it will be seen, occur in the Central Provinces, in Upper Burma, very largely in North-Western Provinces, to a small extent in Punjab, and a considerable amount in Madras and Bombay. The whole loss of Rx. 2,394,100 may be put down as caused by the scarcity.

17. Opium shews in the above statement a falling-off of Rx. 508,600, both the Bengal prices and the export from Bombay being unfavourably affected by low prices in China. There is a slight saving on the Expenditure side in Opium, as the Budget Estimates provided for a better crop than was actually housed.

18. The loss on Salt, Rx. 261,800, may for the most part be put down as one of the consequences of scarcity. It is chiefly during the second-half of the year that the falling-off has taken place ; the receipts of the twelve months ending September 30th, 1896, were equal to the full Budget Estimate of Rx. 8,700,000.

19. Under other Revenue heads we almost always have to report a considerable advance in the Revised Estimates over the Budget figure. They would have shewn the same progress this year were it not for the falling-off in the North-Western Provinces and in Bombay, where the following losses are recorded :—

	North-Western Provinces.	Bombay.
Stamps	22,000	34,000
Excise	125,000	60,000
Provincial Rates	104,000	33,200
Forests	16,700	34,700
TOTAL .	267,700	161,900
	Rx. 429,600	

These losses again are due to the effects of famine, and in the case of the Stamp Revenue of Bombay, still more to the stoppage of trade in consequence of the plague. The Customs Revenue is on the whole slightly better than Budget.

20. Of the improvement under Departmental Receipts, Rx. 124,700 represents the premium received on the last loan (against which, under the same head of "Interest," there was a loss of Rx. 40,000 due by the Calcutta Port Commissioners and remitted), and Rx. 102,000 represents the increased gain on copper coinage, due to the very large issues of that coin in connection with Famine Relief Works. The gain on this coin is brought to credit as the coin passes into circulation.

21. The next great difference requiring explanation is in the Railway Receipts. Confining ourselves to consideration of the earnings of Railways only, we have the following figures :—

	Earnings.	Working Expenses.	Net.
	Rx.	Rx.	Rx.
State Railways—			
Accounts, 1895-96 . . .	18,558,294	9,040,836	9,517,458
Budget, 1896-97 . . .	18,321,700	9,010,800	9,310,900
Revised, 1896-97 . . .	17,524,700	8,825,000	8,699,700
Guaranteed Railways—			
Accounts, 1895-96 . .	6,255,131	2,979,893	3,275,238
Budget, 1896-97 . .	6,330,000	3,097,000	3,233,000
Revised, 1896-97 . . .	5,670,000	3,060,000	2,610,000

These figures give a falling-off of Rx. 611,200 on State Railways and Rx. 623,000 on Guaranteed, total Rx. 1,234,200, an amount which accounts for the differences shewn in the above statements of Rx. 1,423,200 worse on the Revenue side, and Rx. 424,100 better on the Expenditure side ; net Rx. 999,100. The lower receipts have saved us Rx. 142,000 in the payment of surplus profits, and the other Railway charges have also been less than the Budget Estimate. The principal contributors to the above losses are —

	Rx.
North-Western	140,000
Oudh and Rohilkhand	117,500
Rajputana-Malwa	252,500
Bombay, Baroda and Central India	260,000
Great Indian Peninsula	310,000

22. The Eastern Bengal Railway, on the other hand, has gross receipts Rx. 180,000 better than Budget, owing largely to a favourable jute season.

23. Irrigation is the only head which in a year of drought shews an improvement. The net receipts are better than Budget by Rx. 269,500, the improvement being shared between the North-Western Provinces and the Punjab.

24. Passing to the figures on the Expenditure side, the heads Direct Demands on Revenues (other than Opium) and Civil Departments represent mostly charges regulated by sanctioned scale, and they shew the usual savings as compared with Budget. The excess expenditure under Interest is mostly a question of the distribution of this charge between ordinary debt and Railway debt. The heavy excess expenditure on Famine Relief requires no further explanation beyond what is given above. The saving on Protective Works is not a real one,—it merely means that the East Coast, including the Bezwada-Madras Railway, which is both a productive and a protective line, and which is charged to the Famine Grant when that grant is not otherwise appropriated, has this year to be transferred to the Capital Account of Railway Construction.

25. There is a considerable saving of Rx. 274,400 under Army Expenditure. The principal items included in this are—

	Rx.
Unspent out of the special grant of Rx. 494,900 for mobilization purposes, included in Budget	120,000
Savings in Exchange Compensation Allowances in consequence of better exchange	80,800
Savings in ordnance manufactures	75,000
Other very numerous savings on the grants (net)	240,600
TOTAL	516,400

Against this the rise in prices which set in in September has caused extra expenditure of Rx. 196,000, and excesses over established or estimated strength have caused excess charges of Rx. 46,000.

26. The "Provincial adjustment" is better by Rx. 342,100 ; translated into non-technical language, this means that the Provincial balances bear a share of the loss of Revenue and of the Expenditure (chiefly Famine Expenditure) included in the General Account, which is larger by Rx. 342,100 than they estimated, a year ago, they would have to bear. The total Provincial and Local Balances of 31st March 1897 stand as follows :—

	Budget, 1896-97. Rx.	Revised, 1896-97. Rx.
Provincial Balance	1,437,022	1,222,549
Local Balance	1,276,221	1,144,703
TOTAL	2,713,243	2,367,252

27. It may be well here to collect together the various items in these explanations which we have attributed to the effects of famine and scarcity—

	Rx.
Direct cost of Famine Relief	1,876,200*
Rise in prices in Army Expenditure	196,000
Loss of Revenue—	
Land Revenue	2,394,100
Salt Revenue	261,800
Other Revenues in North-Western Provinces and Bombay (excluding Stamp Revenue)	373,600
Loss of Railway Revenue (net)	1,234,200
TOTAL	6,335,900
Gain under Irrigation Revenue	269,500
NET RESULT	6,066,400

* Besides Rx. 14,500 for English Expenditure and Exchange thereon.

Of the above amount, Rx. 574,700 falls upon Provincial and Local Balances, leaving Rx. 5,491,700 to be borne by Imperial.

Loan Operations in 1896-97.

28. As announced in the last Financial Statement, a 3 per cent loan of four crores of rupees was offered for public tender upon June 22, and the tenders were received upon July 22. Money throughout the earlier part of the financial year was extremely cheap, the Bank rate in England being 2 per cent and in Calcutta 4 per cent from May 28 and 3 per cent from July 2. The price of paper ruled high, our 3½ per cent guaranteed loans being in April about R108-7, in May about R110-4, and June about R110-2. The loan was very largely tendered for and was placed at an average of R103-1-10½, the lowest accepted tender being R102-7, and the allotments were practically all paid up by the end of August.

29. It will be remembered that in our conversions of 1894 we offered to those holders of paper who accepted conversion, an equivalent amount of promissory notes on which 3½ per cent interest was guaranteed up till August 1904. Those who did not accept were afterwards offered, and most of them accepted, ordinary 3½ per cent paper without any guarantee. We considered ourselves therefore in a manner bound, if favourable opportunity offered, to convert the unguaranteed 3½ per cent paper, as otherwise it would necessarily be quite as good as the guaranteed. The amount of this ordinary 3½ per cent paper was—

(1) Outstanding of 1853-54	46,760
(2) „ 1893-94	3,500,000
(3) Accepted in conversions of 1894-95	2,138,190
TOTAL	5,684,950

30. Accordingly, after ascertaining that the operation of converting the outstanding unguaranteed 3½ per cent paper into the new loan would not be regarded by the holders of the new paper as in any way interfering with them, but would indeed rather help them by increasing the amount and the marketableness of the new loan, we notified this conversion upon September 4. The success of the new loan had established for the time a high price for securities of the Government of India, and the prospects of the conversion were favourable.

31. Rates held up, both in England and India, just long enough to enable the operation to be successfully closed. The Bank of England rate, which had stood at 2 per cent, from February 1894 was increased to 2½ per cent on September 10, 1896, and to 3 per cent upon September 24, and the rise was the signal for a depression in the value of our securities. When the final day came of tendering for conversion the amount that had been tendered came to Rx. 4,887,160, and Rx. 797,790 was left outstanding for discharge. Of this amount, Rx. 296,600 has been presented for payment up to the beginning of March.

32. Since money hardened in Calcutta in November, the price of the new 3 per cent paper has ruled below par, but this is partly due to the comparative absence of a market, as compared with the larger bulk of the 3½ per cent paper. Our present intention at least is to persevere with the 3 per cent rate, and by our future loans to increase its amount. We have now practically only two kinds of paper on the market, *viz.*, the 3½ per cent guaranteed till August 1, 1904, and the 3 per cent guaranteed until December 31, 1916. The amounts of these two kinds of debt are at present as follow: 3½ per cent Rx. 82,754,840, besides Rx. 8,159,500 held in the Currency Reserve; 3 per cent Rx. 8,887,160, besides Rx. 2,048,650 created during the year for issue to Currency as mentioned in the next section.

Rate of Exchange.

33. Last year closed with a re-action from a somewhat sudden rise in the rate of exchange to $14\frac{3}{4}d.$ During April and May the rate fell from $14\frac{3}{8}d.$ to $13\frac{13}{16}d.$ In June it recovered to $14\frac{5}{32}d.$, and from then till the middle of October the rate was very steady at about $14\frac{1}{8}d.$ and $14\frac{3}{16}d.$, the Secretary of State being very successful in selling his Bills. By the middle of October we had realized that a famine was upon us, and that it would be necessary, as a first step in meeting it, to make large suspensions of revenue and large agricultural advances. We were obliged, therefore, at very short notice to ask the Secretary of State to greatly reduce his drawings. And the result was that the rate of exchange and the Bank rate of interest both very sharply rose. The second week's drawing of October was at $14\frac{7}{32}d.$; the second week's drawing of November was at $15\frac{27}{32}d.$

34. This action on our part caused, I am afraid, grave inconvenience to mercantile circles in India; but it was not avoidable. It was only when the first ten days of October passed without bringing the desired rain, that famine was converted from a mere possibility into an almost certainty, and the area affected was so widespread that the case demanded the reservation of all our financial means. These we took the opportunity of strengthening by carrying out on December 17 a measure which had been under public discussion for over a year, *viz.*, the addition of two crores to our cash balances by the investment of part of the Currency Reserve. The exact figures of this operation were the issue of R2,04,86,500 stock of the 3 per cent Loan of 1896-97, at the rate of the day, R97-10 per cent, being R54-6 less than the full two crores. With this transaction the tenseness of the situation passed away; but the rate of exchange on the drawings never fell below 15 pence, as the Famine expenditure and prospects compelled the Secretary of State to reduce his drawings, and there came a heavy demand for remittance in connection with the Burma rice crop.

Budget Estimates, 1897-98.

35. Following my previous practice of abstaining from any speculation in exchange, I have taken the rate for the Budget Estimate at the same figure which has been realized in the year 1896-97, namely, 14·46 pence. It is impossible to say how trade and exchange may be affected by the very peculiar circumstances of the coming year. Made up upon this basis, the estimates of Revenue and Expenditure work out to a deficit of Rx. 2,464,000. It will be most convenient

in explaining the details to compare them with the Budget figures of 1896-97, rather than with the altogether peculiar figures of the Revised Estimates.

36. This comparison, made in the same form as adopted in paragraph 13 above, is as follows :—

Budget Estimates of 1897-98 compared with those of 1896-97.

	Budget, 1896-97.	Budget, 1897-98.	1897-98 Better.	1897-98 Worse.
STERLING IN ENGLAND—				
Revenue . . . . . £	174,100	173,000	...	1,100
Expenditure . . . . . £	15,909,400	16,088,500	...	179,100

Opium	2,593,900	2,654,000	...	60,100
Other	8,470,700	8,520,400	...	49,700
Interest	—960,300	—961,900	1,600	...
Civil Departments	19,096,100	19,308,800	...	212,700
Famine Relief	75,000	3,641,200	...	3,566,200
Protective Works	523,500	25,000	498,500	...
Railways	13,781,500	13,752,000	29,500	...
Irrigation	3,201,700	3,110,000	91,700	...
Military Works and Special Defences .	1,254,900	1,207,300	47,600	...
Civil Works	4,757,800	4,398,200	359,600	...
Army	17,480,100	16,968,900	511,200	...
	70,274,900	72,623,900	...	2,349,000
PROVINCIAL ADJUSTMENT	—886,400	—1,190,000	303,600	...
Surplus (+) Deficit (−) .	+463,100	—2,464,000	...	2,927,100

37. The main increases of Expenditure in the English Account are—

(1) Increasing Interest payments which account for differences of £61,400 under Interest, and £99,100 under Railways.

(2) Increase of £37,700 under Superannuation Charges.

(3) There is an increase of £65,600 under Army Non-Effective Charges; but it is more than counterbalanced by a saving of £120,700 under Army Effective Charges, chiefly on account of Military Stores for India.

38. The deficiency under Land Revenue is heavy, namely, Rx. 447,100, and may be explained by saying that in Upper Burma, in the Central and the North-West Provinces, and in the Punjab, we do not at present expect to receive, during the coming year, nearly the full measure of Land Revenue. The deficiency comes in the beginning of the year, and is due entirely to the failure of crops. If a prosperous harvest should ensue next October and November, we may reasonably hope for much better results than those shewn in our Estimates.

39. Under Opium we are now suffering from the re-action which two years ago I pointed out to be inevitable. Scanty crops, and the high prices that follow

them for a time, give favourable financial results while they last, but the high prices kill the demand, and both the exports of Malwa opium fall off and smaller prices are realized upon the Bengal drug. The prospects of the coming season, looked at from the point of view of the Opium Department, are extremely favourable, but to our Budget Estimates they mean low prices realized upon the still scanty sales, and heavy outgoings in payment for the raw produce. The result is a falling-off which may be thus distributed :—

	Rx.
By lower prices realized on the Bengal sales . . .	877,500
By smaller export and lower duty in Bombay . . .	190,000

and on the Expenditure side—

By heavier payment to cultivators	60,100

40. Under other Revenue heads there are on the whole better results, though the influence of the famine is still shewn in a falling-off, under Excise, of Rx. 65,600, and under Provincial Rates, of Rx. 48,100.

41. The Departmental Receipts are expected to be somewhat better on the whole than in the Estimates of 1896-97. Post Office shews an advance of Rx. 56,600, more than covered, however, by an increased expenditure, and Telegraph shews worse results on both sides, partly because the advance in revenue has been less than expected, and partly because the rents charged to Railways for the use of wires and instruments have been reduced and it is intended to introduce certain improvements in respect of delivery of deferred messages.

42. Railways shew a great falling-off, as the traffic on them will be greatly affected as long as the effects of the present scarcity last. The following figures may be taken as a continuation of those stated in paragraph 21 above (Indian Accounts only) :—

Budget, 1897-98.	Earnings.	Working Expenses.	Net.
	Rx.	Rx.	Rx.
State Railways . . .	18,023,400	9,027,300	8,996,100
Guaranteed Railways . .	5,740,000	3,110,000	2,630,000

43. On the Expenditure side the figures which require special explanation, in addition to the above remarks, are the following :—

Direct Demands on the Revenues.—Increase Rx. 49,700. The principal item is Rx. 36,900 under Forests, which is of the nature of commercial outlay intended to bring in a good return. The Forest Department are carrying out a scheme, long planned and elaborated, which involves considerable additions to the subordinate establishments engaged in conserving and working the Forests.

44. Civil Departments.—Increase Rx. 212,700. Of this, the principal items are Post Office Rx. 78,400 and Telegraph Rx. 44,700, due to normal expansion of the Departments; Jails Rx. 68,400, being the estimates which the Provincial Governments make of the consequence of increase of prices of food, and of the probable temporary increase of jail population in the distressed tracts; Police Rx. 70,500, due to continued pursuance of the plans for the reform of this Department, but also in some places the result of scarcity and distress; Superannuations, Rx. 28,200, an inevitable annual increase.

45. The heads of Famine and Railways have already been dealt with, and as explained in dealing with the Revised Estimates, the entry of Rx. 498,500, less expenditure on protective works, merely means that we shall not, in 1897-98, obtain from the Famine Grant the aid it usually gives towards expenditure on Capital Account. In view of the amounts provided for Famine Relief, it has not been considered necessary to make special provision for any expenditure which may be entailed on the Imperial Account by the plague.

46. Civil Works.—The less expenditure Rx. 359,600 is due to the restriction of programme by the various Local Governments enforced by the great reductions that Famine expenditure has made in their available balances.

47. Under Army, there is on the whole a less expenditure in India by Rx. 511,200. A fuller statement of the comparison between the Estimates of 1896-97 and 1897-98 would be the following:—

		1896-97.	1897-98.	1897-98 Better.
Mobilization Grant—				
England	£	51,200	*Nil.*	51,200
India	Rx.	494,900	100,900	394,000
Ordinary Grant—				
England	£	4,357,300	4,353,400	3,900
India	Rx.	16,985,200	16,868,000	117,200

The Mobilization Grant was a special one for 1896-97, and a comparatively small amount of expenditure under this head is admitted into the Estimates of 1897-98.

The principal features in the differences in the ordinary portion of the Estimates are: (1) the higher prices of food necessitate an increase of Rx. 399,300 in the Estimates of 1897-98; and (2) there will be a saving of Rx. 326,000 in consequence of the application of more favourable rates of exchange to the calculation of the allowances of officers and of British soldiers. There are further numerous savings and a few increases of charge for which I refer to Part II of the Statement.

Quinquennial Settlements of Provincial Finance.

48. The usual quinquennial investigations and settlements of Provincial finance were made in the course of the year. Our proposals on the subject were made to the Provincial Governments at the beginning of October, before the appearance of famine; and afterwards, when famine supervened, we considered that, as the arrangements depend, not upon the figures of any one year, but upon the general standard of Revenue and Expenditure, it would be sufficient to reserve the final settlement so far as it regarded Land Revenue and Excise and one or two other heads, in the Provinces severely affected by famine, but it was better to settle all other matters than to leave them in a condition of suspense. The settlement of these standards of existing Revenue and Expenditure is the necessary condition for the exercise by Local Governments of the financial authority entrusted to them, in the same sense as the settlement of the Budget Estimates determines the plan upon which our own financial administration is to be pursued for the next twelve months.

49. The first process in these settlements is the enquiry what is to be accepted as the proper amount of expenditure for which an assignment of Revenue is to be made. The expenditure may be stated in general language as that incurred in each province upon Civil Administration; the revenue and expenditure on account of Irrigation are also provincialized in Bengal, North-Western Provinces, and Madras, but this part of the arrangements need not be more specially referred to at present.

50. In two tabular Statements A and B appended to this part of the Financial Statement, I set forth in detail the estimates accepted for the expenditure in 1897, and compare them with the estimates of the same kind upon which the similar settlement was made in 1892. I may mention that we have not, or we practically have not, rejected any of the existing expenditure of the Provincial

Governments as requiring to be disallowed, as we find that the increases of scale of expenditure are sufficiently moderate. The details of the comparison are as follow:—

	Net Expenditure. 1892.	1897.	Increase per cent.
	Rx.	Rx.	
Central Provinces . .	653,300	710,700	8·8
Lower Burma . . .	1,064,600	1,206,100	13·3
Assam	467,600	564,900	20·8
Bengal	2,816,700	3,125,500	10·9
North-Western Provinces .	2,215,400	2,428,700	9·6
Punjab	1,384,600	1,537,300	11·0
Madras	2,054,800	2,238,600	8·9
Bombay	2,409,500	2,544,100	5·6
TOTAL .	13,066,500	14,355,900	9·9

It is fair to the Local Governments to notice that part of the above increase of expenditure was that which was entailed upon them by the allowances given in compensation for fall of exchange.

51. An examination of the Revenue side of the account shewed the following results:

The Central Provinces have been hard hit by two or three bad seasons, and they have been disappointed in the increase of revenue which they might reasonably have expected. We found it necessary to assign them a slightly higher amount than they would have got had the 1892 settlement continued in force. Their balance has been absorbed by their necessary expenditure somewhat exceeding their revenue, and their misfortunes of the current year have, quite apart from famine, entirely swept away their available resources. We reckon that we enhance their assignment by Rx. 29,200 a year; and we have also to make up a small deficit in their balance.

52. Assam shows a fairly progressive revenue, but it is, as Sir E. Baring said in 1882, "a poor province with many wants." We find that we might, upon the present revision, reduce its assignment of Revenue by a small amount, say Rx. 11,400. But we have adjudged it better to leave the Province this amount of surplus.

53. Burma (that is, in the present connection, Lower Burma only) is a young and rapidly progressive province. Its revenue (mainly its Land Revenue) increased during the past quinquennium by 13·9 per cent., and its expenditure has increased as above shown by 13·3 per cent. The above figures are independent of its Railway revenue, the Burma Railways having been, with a slight reservation, Provincial up till now. The Railway part of the 1892 settlement has been very profitable to the Local Government, which has maintained very high, though decreasing, balances throughout the five years. It finishes the present contract with a balance of Rx. 294,300. We have thought it desirable for the present to deprovincialize the Railways as they have now been made over to a Company, and some questions remain to be settled regarding their future administration; but otherwise Burma is only a little worse off (say Rx. 9,000 a year) than if the 1892 settlement had continued in force.

54. The Chief Commissioner—or in future, Lieutenant-Governor—takes over now provincial responsibility for Upper Burma in the same way as for Lower. The Estimate of Expenditure is shewn in the penultimate column of Table B, and sufficient Revenue has been assigned to meet it. I am afraid that the first effect

of this will be to use up part of the high balance with which the Chief Commissioner starts under his new settlement, in paying for famine relief in his new province, and also possibly in meeting some temporary loss of Revenue in it.

55. The Punjab is a politically important province, and it has shown during the last quinquennium only a moderate expansion of Revenue. The consequence is that its resources under the 1892 settlement have been found rather too narrow for the demands of its expenditure, and it has been obliged to reduce its Public Works grants somewhat below the needs of the province. Further, the failure of Revenue in the current year has reduced its balance below the authorized minimum. We find that we place it in a fair financial position if we concede to it, in addition to the Revenue assigned in 1892, an allowance about equal to the expenditure imposed on it by exchange compensation; and, when the famine account is closed, we shall have to make to it also, as to the Central Provinces, a grant in recoupment of its exhausted balances.

56. In the provinces with which I have as yet been dealing, we did not expect and we did not wish, to make a profit to the general account by reducing the amount of Revenue assigned to the Local Governments. Our examination satisfied us that their expenditure was already on a sufficiently limited scale, and that the whole, or nearly the whole, of the revenues assigned to them could be properly left at their disposal.

57. But we have also in the case of these provinces made another arrangement to their advantage. The revenues assigned for Provincial use are, as is well known, certain shares of the various heads of Revenue. These shares in the larger Provinces of Bengal, North-Western Provinces and Madras are about equal, on the whole, to their net expenditure; but in the smaller ones, where the expenditure naturally bears a larger proportion to the revenue, they require to be supplemented by a grant which under present arrangements is a fixed amount. While the revenues increase, this fixed amount does not, and it thus results that, whereas in the big provinces, if the revenue increases by five per cent, the Local Governments have the power (temporarily or permanently, as the case may be) of increasing their expenditure by five per cent, yet in the smaller provinces an increase of revenue by five per cent only permits an increase of expenditure by, say, three per cent. This is the reverse of what ought to be, for the irresistible demands in the new provinces are proportionally greater than in the old ones. We have therefore in the newer provinces enhanced the shares of some of the assigned revenues, by reducing *per contra* the fixed amounts granted in addition to the variable shares. In this way we have given the Punjab ·4 and the Central Provinces ·5, of its Land Revenue, instead of ·25 only. In Burma, which, with Upper Burma now added, has a very large expenditure as compared with its revenue, and also probably considerable demands, and from which we have for the present withdrawn the Railway Revenue, we have found it necessary, in pursuance of this purpose, to raise the share of Land Revenue as high as two-thirds, and we have given it also half its Excise instead of one-quarter only.

58. The state of Provincial finance in the North-Western Provinces had begun to give us anxiety, even before the outbreak of famine. Sir E. Baring in 1882 pronounced (Financial Statement of 1882, paragraph 58), as the result of an enquiry made under his orders, that nowhere in India is a reduction of taxation more required than in the North-Western Provinces and Oudh; and he took certain measures for that reduction which, for reasons fully explained in this Council at the time, were partly reversed in 1889. It is therefore perhaps not unnatural that the Revenue of these Provinces has shewn very little expansiveness. There is a certain advance in its Land Revenue as districts come under

resettlement, but it is rather backward, or at any rate non-progressive, in respect of Excise and other Revenue. At all events its revenue from 1892 to 1897 has advanced only about 2 per cent,—much less than that of any other Province.

59. Now, the settlement of 1892 left the North-Western Provinces with less of revenue than was necessary for its standard of expenditure. The reasons for this I need not mention, but it was intended that five lakhs of its admitted expenditure should be met by reduction of balance.

60. There is also one feature peculiar to the North-Western Provinces Provincial account. It is dependent to the extent of 30 or 35 lakhs of rupees a year upon the net revenue of irrigation canals. Now, one year, very recently, there were unusually good cold weather rains, and the people did not want water from the canals; the result was that the Government of the North-Western Provinces lost 20 lakhs upon its Irrigation account, and I need not say that no Provincial account can stand a loss of that magnitude. True, in this last year of drought, the 20 lakhs have come back to it in the Irrigation account, but the losses under Land Revenue and other heads are so enormous as to swamp this particular gain, and the North-Western Provinces account finishes this year, without reckoning any famine charges, with a debtor balance of Rx. 200,800 which of course we have to make up by a grant out of Imperial. Grants like this, I may remark, are not shown on the face of our accounts: they are made by redistributing the Land Revenue between the Imperial and Provincial columns.

61. We have carefully reviewed the requirements of the Province in the way of expenditure, and we have come to the conclusion that we must enhance its assignment by nearly as much again as the five lakhs by which the assignment of 1892 fell short of the admitted standard of expenditure.

62. We have, in addition to this, made it a grant of four lakhs for the year 1897-98 to enable the Lieutenant-Governor to establish his District Funds on a financially independent basis; this step, which has been long ago accomplished in every other Province in India, not having yet been carried out in the North-Western Provinces.

63. We come now to the important and wealthy maritime Provinces of Bengal, Madras and Bombay, towards which the commercial wealth and the industrial progress of India tend to accumulate. To them we naturally look for obtaining the means for that redistribution of resources which, to again quote Sir E. Baring's Financial Statement of 1882, is one of the objects of the quinquennial revisions, "It is indeed obvious," he said, "that in view of the manifold demands on the Imperial treasury, and the necessity for affording relief to provinces whose means are straitened, the Government of India cannot forego all its claims on the increments of revenue which arise from the growing wealth and prosperity of the country." The mention of the balances of the Provincial Account in these three great provinces, from 31st March 1892 onwards, will show that they may reasonably expect, with a slightly smaller assignment of revenue than at present, to continue their past career of financial prosperity. The Balances in Bengal were, in lakhs of rupees, 23½, 22½, 26, 43, 58; in Madras 42, 26, 29, 38½, 43; in Bombay 41, 38, 40, 30, 40; and since in each case the Local Government was at liberty to estimate for the expenditure of all excess over 20 lakhs, it may be taken that their present scale of expenditure is not the result of any specially enforced economy.

64. We have carefully examined both the revenue and the expenditure of each of these Provinces, and we propose to allow in the present assignment for

the actually existing scale of expenditure. The following figures compare the rate of growth of revenue with that of growth of expenditure :—

	Increase of Revenue from 1892 to 1897.	Increase of Expenditure now allowed.
Bengal	9·6 per cent	10·9 per cent
Madras	14·9 per cent	8·9 per cent
Bombay	10·0 per cent	5·6 per cent

In stating the increase of Revenue for Bengal, the Railway Revenue, alluded to below, is left out of account; and the figures for Madras and Bombay are based on the estimates made by the Government of India before the diminution caused by famine and plague.

65. To a small extent in Madras, namely, in respect of its Land Revenue, the assignment of revenue is provisional and will be settled next cold weather. In the case of Bombay, we have had to postpone the final settlement also of Excise, Stamps, and Forests. But even with these heads remaining open for final determination next year, the settlement is sufficiently complete to be the basis of the exercise by the Local Governments of Provincial financial powers.

66. As regards the effect on the Provincial accounts as compared with that of a continuation of the present assignments, the facts are—

(1) In Bengal we resume a special grant which fluctuated with the earnings of the Eastern Bengal Railway (which is not under Provincial Administration), and we give Rx. 269,400 in lieu of it. The Railway grant was given in 1892 as the equivalent of Rx. 320,000, though, if renewed now on the same terms, it would be worth to the Lieutenant-Governor very much more.

(2) In Madras the assignment is less than that of the 1892 settlement by Rx. 98,200 or Rx. 138,200, according as the Local Government's estimate of Land Revenue or that of the Government of India is ultimately adopted.

(3) In Bombay it is quite impossible to say what the difference is. If the Revenue in the future is to be as seriously reduced as the Government of Bombay estimates, the new settlement is practically a continuation of the old one. But we hope, when present troubles are over, to find the standard of Revenue much higher than the Government of Bombay puts it.

67. It is necessary to add a few words as to the manner in which the Provincial accounts are affected by the famine expenditure. The established policy in such cases is that Local Funds must first be called upon to bear all the expenditure they reasonably can bear, and to "direct their whole resources, subject only to the maintenance of absolutely necessary works in non-affected tracts, to afford relief;" thereafter the Local Governments must meet the demands upon them out of their Provincial balances. At the point where these are reduced below the standard required as working balances for the Provincial financial administrations, the Imperial Government has to step in, and bear the rest of the burden which, in the case of a great famine, is necessarily by far the largest share of it.

68. In the Central and North-Western Provinces the Provincial balances, as already explained, are more than exhausted by reason of failure of revenue. In these cases not only will Imperial have to bear all the charges of famine, but it will have to make up, in addition, the deficit in the Provincial balance.

69. Bombay is nearly as bad—its Provincial account has been hard hit by loss of revenue. It can bear, in Provincial and in Local account, only a few lakhs out of its famine expenditure, and all the rest has to be borne by Imperial.

70. Madras is fortunately only slightly affected by famine, and its revenues have suffered very little. Between its Provincial and its Local balances it will be able to bear the whole, or nearly the whole, of its famine expenditure.

71. In Upper Burma the famine expenditure, which is only 6 or 7 lakhs in each year, will be charged to Imperial this year and to Provincial next.

72. In Bengal only a small area is affected, and the general condition of the Province, as reflected in its Revenue Account, is one of prosperity. Its high balance which, if it had no famine expenditure to bear, would, on 31st March 1897, stand at Rx. 595,700, will be largely dispersed during this and next year by heavy famine expenditure. This sounds a little harder upon Bengal than it really is, for, as a matter of fact, this high balance is the produce, not of any Provincial revenues in the ordinary sense, but of the Imperial grant out of Railway Revenues, not under Bengal administration, which three successive good jute seasons have so enhanced as to give the province a profit, in the three last years, of Rx. 353,500. But I am afraid that this consideration will afford little consolation to His Honour the Lieutenant-Governor for the financial misfortune which has overtaken both his finance and mine.

73. As the Estimates stand, after all the charges for famine are thus distributed, the Provincial balances are shewn upon 31st March 1898 as follows :—

	Rx.		Rx.
Central Provinces . .	*Nil.*	North-Western Provinces	*Nil.*
Burma . . .	140,900	Punjab . . .	36,100
Assam	85,800	Madras . . .	100,000
Bengal . . .	100,000	Bombay . . .	49,500

These will require some adjustment to the necessities of the several provinces, when we come to the end of the year; for the provinces cannot be left without a safe working balance at the very least. What this adjustment will be it is unnecessary now to discuss, for, as already explained, the estimates of famine outlay though the best we can make, are very far from trustworthy, and the actual expenditure is determined by circumstances quite outside any control of ours. We therefore must wait until we can approximately close the account of the famine, and of the immediate disasters to Revenue which it brings in its train.

Railway Construction.

74. In the last Financial Statement I mentioned that the question of Railway Extension was under the general consideration of the Government. A programme involving considerable outlay was explained to the Council by His Excellency the Viceroy on the Budget discussion on March 26th; and the question had been carefully considered in correspondence with the Secretary of State, how to raise the necessary money for the outlay, as the amount required went beyond the capacity of the Indian Money Market.

75. At the beginning of the year the Secretary of State gave formal approval to a programme of Railway Construction, either direct by Government or by Companies acting under guarantee of the Government, which covered about Rx. 28,000,000 of Railway expenditure to be spread over three years, of which 1896-97 was the first. For this 28 crores of expenditure we were to raise in India as much money as we thought we could conveniently borrow, and the rest was to be raised in England, either directly by the Secretary of State or by Companies acting under agreements with him. But the amount of 28 crores thus arranged for does not include the transactions of certain Companies whose relations with Government do not involve a direct guarantee by the latter, and which work under special terms (like the Bengal and North-Western Railway) or under what are

known as Branch Line terms. Nor does it include certain small transactions on Provincial account which are charged to Revenue.

76. The operations thus fall into three categories, namely,—

I.—State Railway Construction, for which money is found by Government aided by capital or debentures raised by two Companies,—the East Indian Railway Company and the Assam-Bengal Railway Company.

II.—Construction by Companies, under contract with Government, out of funds raised by the Companies, but supplemented in two cases by funds advanced at interest by the Government.

III.—Construction by Companies out of their own funds and outside the Government Accounts; and also construction by Branch Line Companies.

There is a fourth category, *viz.*, the old Guaranteed Companies; and though some negotiations are pending in respect of new capital construction by them, they are not further alluded to in these figures.

77. These three categories account respectively for the following expenditure :—

	Revised, 1896-97.	Budget, 1897-98.
	Rx	Rx.
First Category	5 767,700	6,700,000
Second Category	2,990,600	3,430,000
Total on Government Account .	8,758,300	10,130,000
Third Category	2,470,200	3,283,800
TOTAL .	11,228,500	13,413,800

These figures, it should be remembered, include expenditure in England as well as expenditure in India.

(a) First Category.

78. The estimated expenditure of the two years, falling under the first category, is as follows :—

	Revised, 1896 97.	Budget, 1897-98.
Money available by—	Rx.	Rx.
Grant under 48.—State Railway Construction .	3,819,900	5,838,600
East Indian Railway Company's Debentures .	1,437,000	662,100
Assam-Bengal Company's Capital and Debentures	510,800	199,300
TOTAL .	5,767,700	6,700,000

The East Indian and Assam-Bengal are State Railways in the hands of Companies who have power to raise debentures, and in the case of the Assam-Bengal Company share capital also, in sterling, for construction purposes. The capital and debentures raised by these Companies are of course appropriated to their particular lines; but to the extent to which the raising of the money is in advance of its expenditure, the capital so raised diminishes for the time the total amount of construction for which money has to be charged direct on the Government Account of Capital Construction.

79. The above money has been appropriated to the following construction, in which I have omitted separate specification of the smaller items :—

	Rx.	Rx.
State Agency—Open Lines—		
North-Western	435,000	37,700
Eastern Bengal	448,900	322,500
Other Lines	76,000	73,200
State Agency—Construction—		
Burma	166,000	...
East Coast	292,800	65,000
Godaveri Bridge	...	185,000
Rae Bareli-Benares	257,100	432,500
Mari-Attock	373,700	300,000
Mushkaf-Bolan	210,200	...
Kotri-Rohri	420,100	211,000
Bezwada-Madras	841,800	800,000
Southern Punjab	...	222,300
Other Lines	92,500	220,100
Companies' Agency—Open Lines—		
East Indian	680,000	1,200,000
Tirhoot	24,100	110,000
Other Lines	59,400	135,500
Companies' Agency—Constructio :—		
Assam-Bengal	1,170,600	1,330,000
Tirhoot Extensions	220,000	600,000
Other Lines	—500	...
Unappropriated	...	455,200
TOTAL	5,767,700	6,700,000

80. The following is a statement of the principal items of expenditure included in this list :—

Eastern Bengal.—1896-97; Doubling of the line north of Ranaghat. 1897-98; Additional rolling-stock.

Burma.—This line was transferred to a Company, that is, to the second category, from September 1, 1896, and the further expenditure after that date is shewn there.

East Coast.—Is open for traffic from Bezwada to Cuttack, except the Godaveri Bridge.

Godaveri Bridge.—A commencement is being made of this work, which is to cost about 55 lakhs and will take two years to construct.

Rae Bareli-Benares.—The expenditure shewn will complete the line and open it for traffic.

Mari-Attock.—Will be approaching completion at end of 1897-98.

Mushkaf-Bolan.—Finished, including double line on the 1 in 25 gradients.

Kotri-Rohri.—1896-97; Open for traffic, excluding the Indus Bridge at Kotri. 1897-98; The Bridge will be completed.

Bezwada-Madras.—Will be approaching completion at the end of 1897-98.

Southern Punjab.—The expenditure is for the provision of rolling-stock, which falls upon the Government.

East Indian.—The expenditure is upon the Mogul-Sarai to Gya Branch, and for additional rolling-stock.

Assam-Bengal.—Open from Chittagong to Badarpore, and for 75 miles from Gauhati. The expenditure is chiefly on the hill section and on the northern section.

(b) Second Category.

81. The expenditure by Companies under contract with Government, other than the two above specified, are—

	Revised, 1896-97.	Budget, 1897-98.
Companies' expenditure on the Government Accounts—	Rx.	Rx.
Burma	535,400	771,000
Bengal-Nagpur	715,200	1,190,400
Ditto (*a*)	842,500	938,000
Indian Midland	438,500	21,600
Ditto (*a*)	239,900	236,500
Bengal Central, Lucknow-Bareilly, Mysore, Southern Mahratta	219,100	272,500
TOTAL	2,990,600	3,430,000

(*a*) These are advances by the Government; the present arrangement in respect of the extensions of these two Railways being that the funds for expenditure in India are advanced by the Government.

82. The following is a statement of the principal items :—

Burma.—The Mandalay-Kunlôn extension, of which 80 miles will be nearly ready at end of 1897-98 : also additional rolling-stock.

Bengal-Nagpur.—Construction is proceeding on the three branches, Sini to Midnapur, Midnapur to Cuttack, and Midnapur to Howrah. The bridging is very heavy.

Indian Midland.—The Sagar-Katni branch, to be opened by end of 1897-98.

(c) Third Category.

83. The expenditure under the third category is as follows :—

Companies' expenditure outside the Government Accounts and Branch Line Companies—	Revised, 1896-97. Rx.	Budget, 1897-98. Rx.
Bengal and North-Western	612,700	806,000
South Behar	110,000	326,500
Southern Punjab	1,295,200	724,600
Tapti Valley	94,000	850,000
Smaller Branch Lines	358,300	576,700
TOTAL	2,470,200	3,283,800

84. The following are the principal items of expenditure :—

Bengal and North-Western.—The Ganges-Gogra Doab branch lines, and other minor extensions, of which 250 miles will be opened by end of 1897-98. The Gogra Bridge at Bahramghât, also to be opened by end of 1897-98. The Gogra Bridge at Tartipur only commenced.

South Behar.—Approaching completion by end of 1897-98.

Southern Punjab.—Expected to be opened about October or November 1897.

Tapti Valley.—Commenced.

79. The above money has been appropriated to the following construction, in which I have omitted separate specification of the smaller items :—

	Rx.	Rx.
State Agency—Open Lines—		
North-Western	435,000	37,700
Eastern Bengal	448,900	322,500
Other Lines	76,000	73,200
State Agency—Construction—		
Burma	166,000	...
East Coast	292,800	65,000
Godaveri Bridge	...	185,000
Rae Bareli-Benares	257,100	432,500
Mari-Attock	373,700	300,000
Mushkaf-Bolan	210,200	...
Kotri-Rohri	420,100	211,000
Bezwada-Madras	841,800	800,000
Southern Punjab	...	222,300
Other Lines	92,500	220,100
Companies' Agency—Open Lines—		
East Indian	680,000	1,200,000
Tirhoot	24,100	110,000
Other Lines	59,400	135,500
Companies' Agency—Construction—		
Assam-Bengal	1,170,600	1,330,000
Tirhoot Extensions	220,000	600,000
Other Lines	—500	...
Unappropriated	...	455,200
TOTAL	5,707,700	6,700,000

80. The following is a statement of the principal items of expenditure included in this list :—

Eastern Bengal.—1896-97 ; Doubling of the line north of Ranaghat. 1897-98 ; Additional rolling-stock.

Burma.—This line was transferred to a Company, that is, to the second category, from September 1, 1896, and the further expenditure after that date is shewn there.

East Coast.—Is open for traffic from Bezwada to Cuttack, except the Godaveri Bridge.

Godaveri Bridge.—A commencement is being made of this work, which is to cost about 55 lakhs and will take two years to construct.

Rae Bareli-Benares.—The expenditure shewn will complete the line and open it for traffic.

Mari-Attock.—Will be approaching completion at end of 1897-98.

Mushkaf-Bolan.—Finished, including double line on the 1 in 25 gradients.

Kotri-Rohri.—1896-97 ; Open for traffic, excluding the Indus Bridge at Kotri. 1897-98 ; The Bridge will be completed.

Bezwada-Madras.—Will be approaching completion at the end of 1897-98.

Southern Punjab.—The expenditure is for the provision of rolling-stock, which falls upon the Government.

East Indian.—The expenditure is upon the Mogul-Sarai to Gya Branch, and for additional rolling-stock.

Assam-Bengal.—Open from Chittagong to Badarpore, and for 75 miles from Gauhati. The expenditure is chiefly on the hill section and on the northern section.

(b) Second Category.

81. The expenditure by Companies under contract with Government, other than the two above specified, are—

	Revised, 1896-97.	Budget, 1897-98.
Companies' expenditure on the Government Accounts—	Rx.	Rx.
Burma	535,400	771,000
Bengal-Nagpur	715,200	1,190,400
Ditto (*a*)	842,500	938,000
Indian Midland	438,500	21,600
Ditto (*a*)	239,900	236,500
Bengal Central, Lucknow-Bareilly, Mysore, Southern Mahratta	219,100	272,500
TOTAL	2,990,600	3,430,000

(*a*) These are advances by the Government; the present arrangement in respect of the extensions of these two Railways being that the funds for expenditure in India are advanced by the Government.

82. The following is a statement of the principal items :—

Burma.—The Mandalay-Kunlôn extension, of which 80 miles will be nearly ready at end of 1897-98 : also additional rolling-stock.

Bengal-Nagpur.—Construction is proceeding on the three branches, Sini to Midnapur, Midnapur to Cuttack, and Midnapur to Howrah. The bridging is very heavy.

Indian Midland.—The Sagar-Katni branch, to be opened by end of 1897-98.

(c) Third Category.

83. The expenditure under the third category is as follows :—

	Revised, 1896-97.	Budget, 1897-98.
Companies' expenditure outside the Government Accounts and Branch Line Companies—	Rx.	Rx.
Bengal and North-Western	612,700	806,000
South Behar	110,000	326,500
Southern Punjab	1,295,200	724,600
Tapti Valley	94,000	850,000
Smaller Branch Lines	358,300	576,700
TOTAL	2,470,200	3,283,800

84. The following are the principal items of expenditure :—

Bengal and North-Western.—The Ganges-Gogra Doab branch lines, and other minor extensions, of which 250 miles will be opened by end of 1897-98. The Gogra Bridge at Bahramghât, also to be opened by end of 1897-98. The Gogra Bridge at Tartipur only commenced.

South Behar.—Approaching completion by end of 1897-98.

Southern Punjab.—Expected to be opened about October or November 1897.

Tapti Valley.—Commenced.

Remittance and Debt.

85. The following account shews in a shortened form the requirements of the Secretary of State; the figures are drawn up so as to shew separately the transactions on account of Government, and the transactions arising out of the operations of Railway Companies:—

	Revised, 1896-97.	Budget, 1897-98.
Requirements on Government Account—	£	£
Excess of expenditure on Revenue Account	15,561,200	15,915,500
Expenditure not charged to Revenue	1,095,500	1,083,100
Net payments on Remittance Accounts, etc.	44,100	226,600
Total Requirements	16,700,800	17,225,200
Transactions of Railway Companies—		
Net receipts on account of Capital	3,877,200	2,155,500
Payments for Stores, etc.	2,136,700	3,273,700
Net Receipts	1,740,500	...
Net Outgoings	...	818,200
Net Funds required	14,960,300	18,043,400

86. The following figures shew the manner in which the above requirements have been or are to be financed:—

	Revised, 1896-97.	Budget, 1897-98.
	£	£
By Council Bills	15,300,000	13,000,000
By addition to Permanent Debt	81,200	3,500,000
Temporary Debt—		
Reduction	−1,000,000	...
Addition	...	1,000,000
By reduction of Cash Balance	579,100	543,400
	14,960,300	18,043,400

87. It will be seen that Railway Companies took advantage of cheap money to raise a large amount of capital during 1896-97, and the amount provided for in the Budget was enhanced by a new arrangement made in the course of the year for the transfer of the Burma Railways to a Company: these receipts on Capital Account enabled the Secretary of State not only to meet with ease the reduction imposed on his drawings and alluded to in paragraph 33 above, but also to pay off a million of temporary debt without renewing it.

The transaction in permanent debt in 1896-97 was the raising of a new loan, India 2½ per cent stock £2,400,000, which was used to pay off debentures nearly equal in amount.

88. For next year the requirements of the Secretary of State are considerably enhanced, as he has now to meet heavy charges of the Railway Companies

against the capital accumulated in 1896-97. On the other hand, our means of meeting his drawings in India are greatly limited, both by reason of the adverse circumstances of the year in respect of famine expenditure and by reason of the heavy Railway programme of expenditure. This last, as already fully explained, includes not only an unusually large amount of Railway construction on Government account, but also heavy outlay of Railway Companies, partly against these same receipts of Capital in last year's account.

89. We intend to supplement our resources in India by borrowing four crores of rupees; but as will be seen from the Ways and Means Account in India in Part II of this Statement, we estimate that we will not be able, even with this, to meet more than £13,000,000 of drawings during the year.

90. The Secretary of State is therefore obliged to have recourse to borrowing, and his present intention is to raise £3,500,000 of permanent debt, besides restoring the £1,000,000 by which in the current year he has diminished the temporary debt.

91. These announcements of the amounts of Council Bill drawings and of debt to be raised are made with the usual reservation of entire liberty to the Secretary of State to vary the amounts as he may find occasion.

92. Before passing from this subject I note that the year 1896-97 is remarkable as being the first in which the Government of India have secured for themselves the full benefit of the general reduction in the rate of interest. For the first time India sterling stock has been raised in England at 2½ per cent, and Indian rupee debt has been raised at 3 per cent, a premium having been obtained in each case. Moreover, we have also, in the contract for the transfer of the Burma Railways to a Company, been able for the first time to make the arrangements on the basis of a 2½ per cent guarantee.

Conclusion.

93. I concluded my statement last year with expressing the view that our financial prospects were "now very much more hopeful;" although I "refrained from any prophecies as to the future." Our prospects are for the present marred by the occurrence of widespread famine, and of pestilence which is as yet confined within a narrow area. I can only now express the hope that a year hence these disasters will have passed away; and that as the deficits I am now obliged to declare are certainly much smaller than the losses due to famine and scarcity, we shall, when relieved from these misfortunes, resume that financial progress which they have interrupted.

PART II

DETAILS OF THE ACCOUNTS AND ESTIMATES.

Section I.—The Accounts of 1895-96.

Accounts of 1895-96.

94. The Revised Estimates of 1895-96 anticipated a surplus of Rx. 951,400 the actual surplus of the year in the closed Accounts is considerably higher, being Rx. 1,533,998.

Explanations of the variations under the several heads of the Account figures from those of the Budget and Revised Estimates will be found in the Appropriation Report published in the *Gazette of India* of the 13th instant. The following is a general comparison of the Revised Estimates with the Accounts of the year:—

		Revised Estimate.	Accounts.	Accounts, better.	Accounts, worse.
REVENUE.					
India	Rx.	97,509,000	97,977,005	468,005	...
England	£	210,300	223,417	13,117	...
Exchange	Rx.	158,600	169,745	11,145	...
TOTAL	Rx.	97,877,900	98,370,167	492,267	...
EXPENDITURE.					
India—					
Imperial, Provincial, and Local	Rx.	69,003,900	68,998,722	5,178	...
Adjustment of Provincial and Local Surplus or Deficit	Rx.	+383,000	+379,109	3,891	...
NET	Rx.	69,386,900	69,377,831	9,069	...
England	£	15,701,000	15,603,370	97,630	...
Exchange	Rx.	11,838,600	11,854,968	...	16,368
TOTAL	Rx.	96,926,500	96,836,169	90,331	...
SURPLUS	Rx.	951,400	1,533,998	582,598	...

1895-96. General Results.

95. The Expenditure in India fell short of the amount taken in the Revised Estimate by Rx. 5,178, and the Revenue in India exceeded that taken in the Revised Estimate by Rx. 468,005. The division of these two improvements between Imperial and Provincial was—

	Imperial.	Provincial and Local.
	Rx.	Rx.
Increase in Revenue	422,307	45,698
Saving in Expenditure	54,767	...
Excess in Expenditure	...	49,589

the improvement in the Imperial section being Rx. 477,074. The average rate of exchange for the year, 13·638*d.* the rupee, was slightly lower than that taken in the Revised Estimates, 13·68*d.* the rupee, the sales of Council Bills in the latter part of March—when the selling rates were above the average of the year—having been less than expected. The Revenue in England, including Exchange, exceeded the Revised Estimate by Rx. 24,262, while there was a saving in Expenditure in England, including Exchange, of Rx. 81,262. The two last-

mentioned amounts, being both on the Imperial section of the Account, added to the improvement in India, Rx. 477,074, make up the total improvement of Rx. 582,598 in the Accounts as compared with the Revised Estimate.

96. The most important items of the increase in Revenue in India were—

	Rx.
State Railways	183.594

The Railway traffic was heavy in March last.

	Rx.
Customs	127,078

The exports of rice and the imports of silver and cotton goods were large in March.

	Rx.
Salt	66,845

This occurred chiefly in Madras, the preference for payment of the duty in cash instead of taking credit on security having continued throughout March.

	Rx.
Opium	66,822

There was a slight revival in the Malwa Opium export trade in March last.

97. The variations in the Expenditure in India are unimportant, except increases of Rx. 113,264 under 14.—Interest (due to two years' interest instead of one year's only on one of the Service Funds having been charged in 1895-96: there will consequently be no charge in 1896-97) and of Rx. 54,778 under Military Works, and an overestimate of Rx. 88,088 under Army. Under other heads the Expenditure was, as a rule, less than in the Revised Estimate.

98. The Revenue in England exceeded the Revised Estimate by £13,117, the increase being in Army Receipts. The Expenditure in England fell short of the Revised Estimate by £97,630, the decrease occurring mainly in the purchase of stores.

99. The Expenditure not charged to Revenue amounted to Rx. 4,087,194, as compared with Rx. 4,327,200 entered in the Revised Estimate: the progress of expenditure in March last was not so great as was expected.

Section II.—The Revised Estimates of 1896-97.

100. The following is a general comparison of the Budget Estimates with the Revised Estimates of 1896-97:—

		Budget.	Revised.	Revised, better.	Revised, worse.
Revenue.					
India	Rx.	97,316,800	93,273,600	...	4,043,200
England	£	174,100	319,400	145,300	...
Exchange	Rx.	129,800	210,800	81,000	...

1896-97. Main features.

101. Famine in nearly all Provinces and plague in one Province are the governing factors of the year. The south-west monsoon rains ceased much earlier than usual, and a widespread failure of crops resulted. Though the winter rains have since been generally favourable, the distress is such that expenditure on Famine Relief has been necessary on a very heavy scale in the North-Western Provinces and Oudh, the Central Provinces, Bombay, and Bengal, and to a smaller extent in the Punjab, Madras, and Upper Burma; and in all the Provinces named, except Bengal (in which the Land Revenue, being permanently settled and levied at a lower rate than in other Provinces, is hardly affected by scarcity), large remissions or suspensions of Land Revenue and Provincial Rates have been made. The Railway Revenue has also been much reduced, a result largely due to the failure of crops; and Salt and other heads of Revenue have also been affected by the scarcity. In Bombay the plague has been added to the famine, and has seriously damaged both the trade and the Government Revenues. Fortunately it has not yet spread to other Provinces. There has, moreover, been a heavy loss of Revenue under Opium. On the other hand, the rate of exchange has risen during the year, the average rate being expected to be nearly 14·46*d.* the rupee, as compared with the rate of 13$\frac{3}{4}$*d.* taken in the Budget Estimate: this has somewhat mitigated the effect, on the finances of the Government, of the calamities of the year. The final result is a deficit of about two crores.

1896-97. General Results.

102. The total Revenue in India is expected to fall short of the Budget Estimate by no less than Rx. 4,043,200 and the total Expenditure in India to exceed the Budget Estimate by Rx. 382,500. In England the Expenditure is slightly less than the Budget Estimate, and the Receipts are higher, but the important feature in connection with the sterling figures is again, as it was last year, the large saving secured by the rise in the rate of exchange.

1896-97. Decreases of Revenue in India. Land Revenue.

103. The falling-off in Land Revenue, including that due to Irrigation, is Rx. 2,432,100, and in Provincial Rates Rx. 131,800. The losses in the Provinces affected by famine are—

	Land Revenue.	Provincial Rates.
	Rx	Rx
North-Western Provinces and Oudh . .	1,199,700	101 000
Bombay	418,800	33,200
Madras	394,000	...
Central Provinces	204,600	5,000
Upper Burma	162,000	...
Punjab	94,900	16,300

In Assam also, the Revenue under these heads is expected to be slightly less than the Budget Estimate, but that reduction is not in any way connected with famine. In Bengal and Lower Burma the Budget Estimates will be more than realised.

Railway Revenue.

104. The loss in Railway Revenue is—

	Rx.
State Railways, Gross Receipts	797,000
Guaranteed Railways, Net Receipts	623,000

It is probably not incorrect to attribute the whole of this loss also to the plague in Bombay and Karachi, which has paralysed business in those cities, and to the scarcity, which being very widespread does not lead to traffic from one part of India to another as scarcity in one Province combined with plenty in another does. Indeed the loss due to these causes is probably greater, as the traffic receipts would probably, had these calamities not come upon the country, have exceeded the Budget Estimates, which were cautiously framed, the improvement in Railway earnings in 1895-96 having been specially great.

The following list of the principal diminutions in gross receipts will show that the loss in Railway Revenue has been nearly as widespread as that in Land Revenue :—

	Rx.
North-Western Railway	310,000
Rajputana-Malwa Railway	380,000
Oudh and Rohilkhand Railway	170,000
Bengal-Nagpur Railway	80,000
East Indian Railway	20,100
South Indian Railway	15,000
Southern Mahratta Railway	10,000
Great Indian Peninsula Railway	350,000
Bombay, Baroda and Central India Railway	260,000
Madras Railway	50,000

As an exception to the general rule of the year, there have been increases on some Railways, the only ones of importance being—

	Rx.
Eastern Bengal Railway	180,000
Burma Railway	65,000

These are due to specially good crops, in the first case, of jute, and in the second, of rice.

pium Revenue.

105. The loss in Opium Revenue amounts to Rx. 508,600.

The quantity of Bengal Opium sold is the same as was taken in the Budget Estimate. But the average price realised has been only R1,243-10-10 instead of R1,300 a chest. This has reduced the receipts in Bengal by Rx. 216,300.

The quantity of Malwa Opium exported has declined very seriously, with the result that the receipts in Bombay have fallen by Rx. 282,800.

Salt Revenue.

106. The reduction in Salt Revenue amounts to Rx. 261,800 : it is distributed over all the Provinces in which Salt Revenue is realised, except Bengal. In Burma the loss is Rx. 24,200 : the Salt administration in that Province is not yet satisfactory. The diminution in Madras of Rx. 110,100 is believed to represent mainly a postponement of payment of the duty from this year to next, the low price of Government paper having induced the dealers to avail themselves of the six months' credit which is allowed if security is pledged, but may also be partly due to the scarcity. In Bombay the loss of Rx. 105,000 is attributed to the scarcity and the paralysis of business caused by the plague. The smaller reduction of Rx. 30,000 in the Northern India Salt Department is probably also due in large part to the scarcity.

Excise Revenue.

107. The Excise Revenue will fall short of the Budget Estimate by Rx. 131,500. This loss also is attributable to the famine. The loss in the North-Western Provinces and Oudh is Rx. 125,000, in Bombay Rx. 60,000, in the Central Provinces Rx. 40,000, and in the Punjab Rx. 1,700. On the other hand, there are increases of Rx. 35,000 in Madras, Rx. 32,300 in Burma, and Rx. 25,000 in Bengal.

1896-97. Increases of Revenue in India.

108. In partial reduction of the heavy losses above set forth there have been increases under a few heads.

Irrigation Revenue.

109. The most important of these is an increase of Rx. 352,500 in the direct receipts of Major Irrigation Works : of this, Rx. 190,300 occur in the Punjab and Rx. 145,500 in the North-Western Provinces and Oudh. This small set-off against the effects of the famine on other Revenues is due to the same cause as the famine : the failure of rain has induced the cultivators to make greater use of irrigation. In paragraph 118 of the Financial Statement for 1896-97 it was explained that the Budget Estimate under this head was abnormally high, and had been subjected to careful scrutiny before being accepted. The further failure of the rains which was not anticipated in the Budget Estimate has raised the receipts still higher. In Bengal also the receipts from the water-rate on the Orissa and Sone Canals and from the navigation dues on the Orissa and Hidgellee

Tidal Canals have increased, and the Revised Estimate in Bengal exceeds the Budget Estimate by Rx. 19,000.

Mint Receipts.

110. The receipts under Mint exceed the Budget Estimate by Rx. 103,800. This is indirectly connected with the scarcity: the famine relief works lead to a very large absorption of copper coin: there is a gain on all copper coins issued, the nominal value of the pieces being greater than the cost of the copper and of manufacture. This gain is expected this year to reach the unprecedented amount of Rx. 122,000. The Calcutta Mint has been unusually busy in supplying the demand for copper, and both Mints are manufacturing in addition a specially large quantity of small silver coins, which are also required at the relief works.

Customs Revenue.

111. The Customs Revenue is expected to exceed the Budget Estimate by Rx. 34,800. There is an increase of Rx. 100,200 in the duty on silver, the imports of which have been higher than it was thought safe to take in the Estimate. On the other hand, the export duty on rice is expected to yield less than the Budget Estimate by Rx. 80,700, as much of the rice which would have been exported has been sent to the famine-stricken districts. On other articles there is no difference of importance between the Budget and Revised Estimates.

Interest Receipts.

112. In the Interest Receipts there was a solid gain of Rx. 124,700 from the premium at which the 3 per cent loan of four crores was issued. The increase under the head is, however, reduced to Rx. 79,300, mainly by the remission of Rx. 40,000 of interest due by the Calcutta Port Trust.

XXIV.—Exchange.

113. There is an increase of Rx. 61,400 under the head XXIV.—Exchange. The difficulties in the way of making accurate estimates under this head have been explained in previous Financial Statements.

1896-97.

Increases of Expenditure in India.

Famine Relief.

114. The Expenditure in India like the Revenue has been overshadowed by the famine. When the Financial Statement issued, there was fear of scarcity only in the North-Western Provinces and Oudh, to meet which a provision of Rx. 70,000 was expected to be sufficient. The failure of the monsoon has, however, necessitated expenditure in every Province, except Lower Burma and Assam. The amounts required for this expenditure up to the end of this month according to the estimates of the Local Governments are—

	Rx.
North-Western Provinces and Oudh	1,100,000
Bengal	359,200
Central Provinces	335,000
Bombay	348,000
Punjab	115,900
Madras	80,700
Upper Burma	58,100
TOTAL	2,396,900

The Government of India have given the Local Governments full liberty to spend up to those amounts, or even beyond them, if necessary, for the relief of distress. But there is no doubt that the Local Governments (except those of the North-Western Provinces and Burma) have overestimated the probable expenditure. We know the total expenditure and the number of persons relieved up to the end of January, and also the number of persons relieved in February. On consideration of these data we believe that the total expenditure this year will not exceed Rx. 1,950,000, and we have therefore entered that amount in the Revised Estimate, distributing it as follows:—

	Rx.
North-Western Provinces and Oudh	1,100,000
Bengal	230,000
Central Provinces	215,000
Bombay	251,000
Punjab	55,900
Madras	40,000
Upper Burma	58,100
TOTAL	1,950,000

Of course, this reduction of the figures entered in the Revised Estimate will have no effect on the actual expenditure. In addition to the amounts above stated for the several Provinces, there is a small expenditure of Rx. 1,200 on the salaries of officers supervising relief operations in Native States, and of £8,700 in England on the purchase of seeds.

Distribution of Famine Relief Expenditure in 1896-97.

115. Under the Provincial Settlements all expenditure on Famine Relief, which is not borne by Local Funds, is in the first place charged in the Provincial column. But when the expenditure is of the magnitude which it has reached this year and is expected to reach next year, it is much more than Provincial Balances can meet and the charge is necessarily borne by Imperial also. The principle to be followed is stated in paragraph 67 above, and applying that principle the Government of India have, after consideration of the financial position of each Province, distributed the expenditure on Famine Relief in 1896-97 as follows:—

	Imperial.	Provincial.	Local.
	Rx.	Rx.	Rx.
Central Provinces	205,000	...	10 000
Upper Burma	57,300	...	800
Bengal	...	185,000	45.000
North-Western Provinces and Oudh	1,100,000	...	...
Punjab	...	23,100	32,800
Madras	...	32 500	7,500
Bombay	189,900	61,100	...
	1,552,200	301,700	96,100

1896-97. Other Increases of Expenditure in India.

116. In addition to the direct expenditure on Famine Relief, the scarcity has unavoidably caused increases under a large number of the ordinary heads: Government servants on low pay have had to receive compensation for the dearness of food, and the rise in prices has increased the cost of supplies purchased by various Departments. But when it was seen in October last that a large famine expenditure would be necessary, orders were issued to restrict as much as possible all ordinary expenditure. The result has been that, notwithstanding the increased expenditure caused by the rise in prices under nearly all the ordinary heads of Expenditure, there have been savings from the Budget Estimates. The only heads under which there will be excesses of importance over the Budget Estimates are—

	Rx.
Jails	99,100
Interest on Debt	100,400
Major Irrigation Works: Working Expenses	55,400

Jail Expenditure.

117. The increase in Jail expenditure is due entirely to the great cost of rations for the prison population. In Burma the expenditure this year is increased, to the relief of next year, by the purchase of considerable stocks of provisions in anticipation of a further rise in prices.

Interest Charges.

118. Of the excess under Interest, the fact that the Railway Capital Expenditure has not been so high as expected in March last, and that consequently the transfer from Ordinary to Railway Interest is reduced, accounts for Rx. 61,700. The remainder is due to the excess interest payments in connection with the conversion of the 3½ per cent loan of 1893-94 to 3 per cent, and to the payments of arrears of interest on expired loans having been greater than expected.

Irrigation Expenditure.

119. The excess in the Working Expenses of Major Irrigation Works has been caused by the necessity of repairing damages caused by floods to the Kistna, the Godavery and Cauvery Delta systems and the Srivaikuntam Anicut system in Madras at a cost of Rx. 29,000, and of repairs, costing Rx. 22,300, to the Western Jumna, Bari Doab, and Sidnai Canals in the Punjab rendered necessary by increased irrigation.

120. The important decreases of expenditure in India are— *1896-97. Decreases of Expenditure in India.*

	Rx.
Land Revenue	81,600
Opium	00,000
Forest	50,300
Interest on Other Obligations	51,400
Education	87,200
State Railways	185,800
Guaranteed Railways—Surplus Profits, etc.	145,000
Military Works	93,300
Army	274,400

121. The Punjab is the only Province in which the Land Revenue expenditure will exceed the Budget Estimate: the excess is Rx. 12,200, and is due to payment of compensation for dearness of provision, to additional expenditure on the survey and demarcation of holdings irrigated by the new Chenab Canal, and to the savings usually secured in the salaries of the officers present on duty in the Province in connection with leave having been somewhat overestimated in the Budget Estimates. *Land Revenue Expenditure.*

In all other Provinces there are considerable savings from the Budget Estimates. The Provincial Governments usually make more liberal provision than is found to be necessary.

122. The Local Governments usually estimate for a larger expenditure on Forests than is required. *Forest Expenditure.*

123. In paragraph 122 of the Financial Statement for 1896-97 it was explained that the estimate of Opium expenditure was taken somewhat lower than usual in consequence of the information as to the crop then in the ground. The crop proved to be still smaller, and the payments to cultivators for opium will accordingly be less by Rx. 90,000. *Opium Expenditure.*

124. The decrease in the Interest on Other Obligations is due to the payment in 1895-96 of interest payable in 1896-97 mentioned in paragraph 97, in consequence of which there will be no payment this year. *Interest on Other Obligations.*

125. The decrease under Education is due to the Local Governments having, as usual, made more liberal provision in the Budget Estimates than was required. *Education Expenditure.*

126. The working expenses of State Railways were reduced by the falling-off in traffic, which caused the larger loss in receipts. *Railway Expenditure.*

127. The decrease in the payments of Surplus Profits to Guaranteed Railways is a consequence of the decrease in the earnings of the Railways. *Surplus Profits.*

128. The Military Works Department was unable to spend the whole of the grant placed at its disposal. *Military Works Expenditure.*

129. Under the head Army the rise in the price of food for men and animals is expected to cause in the current year an excess over the Budget Estimate of Rx. 196,000: and the higher strength of the army, officers and men an excess of Rx. 46,000. On the other hand, the rise in the rate of exchange has caused a saving of Rx. 80,800 in Exchange Compensation Allowance, and of Rx. 24,000 in the cost of Australian remounts: the expenditure on mobilisation arrangements will be less than the Estimate by Rx. 120,000, about half of which is due to the expenditure being incurred in England, so that the provision in the India Estimates was unnecessary, and the other half to its having been found impossible to carry out the intended work; and savings under ordinary expenditure to the extent of Rx. 291,600 have been secured,—in some cases by postponing expenditure which it was intended to incur, but in most simply because the Budget Grants had been fixed on a more liberal scale than was required. *Army Expenditure*

130. One cause of saving which affects almost all the Expenditure heads in India is the rise in the rate of exchange above that assumed for the calculation of the cost of Exchange Compensation Allowances. The average rate taken for this purpose in the Budget Estimate was 13$\frac{3}{4}$*d.* the rupee: the four *Exchange Compensation Allowances.*

quarterly rates with reference to which the Exchange Compensation Allowances have been paid are $14_{32}^{7}d.$, $14_{32}^{8}d.$, $14_{32}^{5}d.$, and $14_{32}^{9}d.$, yielding an average for the whole year of $14_{16}^{5}d.$ The consequent saving amounts to Rx. 207,700.

1896-97. Revenue in England.

131. The Sterling Receipts are expected to exceed the Budget Estimate by £145,300. The three important items composing this increase are: the premium of £68,900 realised on the issue of $2\frac{1}{2}$ per cent India Stock; £27,500 interest on temporary investments of the cash balance, the rates of interest realised being higher; and £34,100 under Army Receipts mainly in connection with the Indian Troop Service.

1896-97. Expenditure in England.

132. The Sterling Expenditure is expected to be less than the Budget Estimate by £28,800. There is a saving of £137,500 under Army (of which £40,600 is a transfer to the head Special Defences and the remainder occurs chiefly under Stores and Troop Service) and of £25,600 under Interest (the Secretary of State having made good progress with the sale of Council Bills in the early part of the year was able to postpone the replacement of £1,000,000 India Bills discharged in May and to refrain from temporary borrowing from the Bank of England). These savings were largely counterbalanced by a number of excesses under other heads.

1896-97. Exchange.

133. The charge for Exchange on net Sterling Expenditure is less than in the Budget Estimate by Rx. 1,459,500. The net Sterling Expenditure is less by £174,100, and the exchange on this difference at $13\frac{3}{4}d.$ the rupee, the rate of the Budget Estimate, is Rx. 129,800 which is the saving in exchange due to the decrease in the sterling payments. The direct saving in exchange on sterling transactions from the rise in the rate of exchange from $13\frac{3}{4}d.$ to 14·46*d.* the rupee is therefore Rx. 1,329,700.

Section III.—Budget Estimate of 1897-98.

1897-98. Statement of the gross figures.

134. The following is a general comparison of the Budget Estimates of 1897-98 with those of 1896-97:—

	1896-97.	1897-98.	1897-98, better.	1897-98, worse.
REVENUE.				
India . . . . . Rx.	97,316,800	95,389,600	...	1,927,200
England . . . . . £	174,100	173,000	...	1,100
Exchange . . . . . Rx	129,800	114,200	...	15,600
TOTAL . Rx.	97,620,700	95,676,800	...	1,943,900
EXPENDITURE.				
India—				
Imperial, Provincial, and Local Rx.	70,274,900	72,623,900	...	2,349,000
Adjustment of Provincial and Local Surplus or Deficit . Rx.	−816,400	−1,190,000	303,600	...
NET . . Rx.	69,388,500	71,433,900	...	2,045,400
England . . . . . £	15,909,400	16,088,500	...	179,100
Exchange . . . . . Rx.	11,859,700	10,618,400	1,241,300	...
TOTAL . Rx.	97,157,600	98,140,800	...	983,200
SURPLUS . Rx.	+463,100	−2,464,000	...	2,927,100

1897-98. Main features.

135. The famine continues in 1897-98 also to exert its malignant influence and to dominate the finances of India.

The expenditure on Famine Relief will be higher than in 1896-97: the loss of Land Revenue and of Railway Revenue, though diminished, will still be considerable; the revenue under some other heads will be diminished, and the expenditure under many ordinary heads will be increased, as indirect results of the scarcity.

The present low price of Bengal Opium and the stagnation of the export trade in Malwa Opium involve a heavy loss of Opium Revenue.

On the other hand, the rise in the rate of exchange secures a large saving, and there is a considerable reduction in Military expenditure.

The final result is a deficit of nearly two-and-a-half crores of rupees.

1897-98. Decreases of Revenue in India.

Land Revenue and Provincial Rates.

136. The Governments of the North-Western Provinces and Oudh, the Central Provinces, the Punjab, and Burma all consider that remissions or suspensions of Land Revenue will be necessary next year because of the famine, and the Estimates are less than the Budget Estimates of 1896-97 by the following amounts:—

	Land Revenue, including that due to Irrigation.	Provincial Rates.
	Rx.	Rx.
North-Western Provinces and Oudh	186,400	32,600
Central Provinces	264,600	...
Upper Burma	169,600	...
Punjab	95,200	17,700

In the other Provinces increases are expected to accrue in ordinary course, and will counterbalance to some extent the above losses: the net reduction in Land Revenue, including that due to Irrigation, is Rx. 436,500, and in Provincial Rates Rx. 48,100.

Railway Reven

137. As the effects of the famine and plague on Railway traffic are expected to continue next year, though not to so damaging an extent as this year, the Railway Receipts are taken lower than in the Budget Estimate for 1896-97 by—

	Rx.
State Railways—Gross Receipts	298,300
Guaranteed Railways—Net Receipts	603,000

Excise Revenue.

138. The Excise Revenue is taken at an amount less by Rx. 65,600 than the Budget Estimate of 1896-97. The reductions are—

	Rx.
Central Provinces	83,800
North-Western Provinces and Oudh	65,000
Bombay	60,000
Punjab	700

They are all attributable to the famine, or in Bombay to the famine and plague combined. Other Provinces estimate for the usual increases in Excise Revenue, that is to say, as a rule, estimate that the Revenue next year will be at least as high as the Revised Estimate of this year, and the increases in other Provinces (the highest being in Madras of Rx. 85,000) counterbalance a very large part of the loss above shown.

Opium Revenue.

139. The only other head of Revenue in India under which there is an important decrease is Opium; and there the loss is very heavy, amounting to Rx. 1,079,100, as compared with the Budget Estimate of 1896-97.

The price of Bengal Opium was taken at R1,300 a chest last March: the prices have since declined heavily, and we cannot assume that we shall receive so high a price next year. The average price at the sale of this month was R1,071 a chest, and the price for the Budget Estimate has been taken at that amount approximately, namely, R1,075 a chest. This lower price results in a loss of Rx. 877,500.

As explained in paragraph 105 above, the export trade in Malwa Opium is in a very depressed condition, and until there are clear signs of a revival, we are not justified in estimating for so high a revenue from the export duty as we did last March. The rate of duty was also reduced in July last by R50 a chest. The Bombay receipts have accordingly been taken Rx. 190,400 lower than last year.

1897-98. Increases of Revenue in India.

140. The increases of revenue which it has been found possible to include in the Budget Estimate for next year are few. The only ones of importance are—

	Rx.
Irrigation—Direct Receipts	224,400
Stamps	103,800
Post Office	56,600

Irrigation Revenue.

141. The increase in Irrigation revenue occurs in the Punjab Rx. 112,900, the North-Western Provinces and Oudh Rx. 99,700, and Bengal Rx. 15,000. A large part of the increase secured in Bengal this year (see paragraph 109 above) is expected to be continued. The opening up of new channels from the Chenab Canal will secure new revenue, and the conditions of the season warrant us in expecting a high revenue generally in the Punjab and the North-Western Provinces and Oudh, though not so high as in the currrent year.

Stamp Revenue.

142. The increase under Stamps occurs in Bengal Rx. 64,500, and in the Punjab Rx. 35,000. The Stamp revenue has improved very much in those two Provinces in the current year, and it is assumed that the improvement will be maintained next year. In Bombay owing to the plague, and in the North-Western Provinces and Oudh probably because of the famine, the Stamp revenue this year has declined considerably—by Rx. 34,000 in the former and Rx. 22,000 in the latter—, but it is hoped that the decrease may be made good next year.

Post Office Receipts.

143. The increase in Post Office receipts represents the normal annual increase in revenue.

1897-98. Increases of Expenditure in India.

Famine Relief.

144. The expenditure on Famine Relief entered in the Budget Estimates of 1897-98 amounts to the very large sum of Rx. 3,641,200. The amounts for the several Provinces are—

	Rx.
North-Western Provinces and Oudh	850,000
Bengal	1,004,800
Central Provinces	680,000
Bombay	670,300
Punjab	167,800
Madras	200,400
Upper Burma	66,600
TOTAL	3,639,900

These are the sums estimated as likely to be required by the several Local Governments, and as the Government of India are unwilling to take any step which would have even the appearance of putting any check on expenditure on this object other than the recognised checks prescribed in the Famine Codes, the estimates of the Local Governments have been accepted. The difficulty of any accurate forecast is very great, and experience alone can show whether the estimates are excessive or insufficient. We have good hope that the expenditure may be considerably less, if the monsoon is favourable.

In addition to the amounts above stated, there is an expenditure of Rx. 1,300 for the supervision of relief operations in Native States.

145. The following table gives for 1897-98 the information regarding the distribution of the expenditure on Famine Relief between Imperial, Provincial, and Local, which is given for 1896-97 in paragraph 115 above:— *Distribution of famine relief expenditure in 1897-98.*

	Imperial. Rx.	Provincial. Rx.	Local. Rx.
Central Provinces	677,900	...	2,100
Upper Burma	...	65,100	1,500
Bengal	701,300	221,800	81,700
North-Western Provinces and Oudh	850,000	...	...
Punjab	126,000	...	41,800
Madras	19,300	131,100	50,000
Bombay	570,300	...	100,000
	2,944,800	418,000	277,100

146. The other heads under which the Budget Estimates for Expenditure in India of 1897-98 exceed those of 1896-97 by important amounts are— *1897-98. Other Increases o Expenditure in India.*

	Rx.
Opium	60,100
Post Office	78,400
Jails	68,400
Police	70,500
Railway and Irrigation Interest	202,800
Land for Subsidised Railway Companies	128,000

147. In March last we had information that the yield of the poppy crop then in the ground was likely to be below the normal, and we therefore reduced the provision in the Budget Estimate for 1896-97 under Opium slightly below the amount required to pay for an average yield. This year the reports of the crop are not unfavourable, and we have therefore provided the sum required to pay for the normal amount of 100,000 maunds of opium. *Opium Expenditure.*

148. The increase under Post Office is rather higher than the normal annual increase of expenditure of the Department. *Post Office Expenditure.*

149. The increase under Jails is distributed over all the Provinces except Burma (where there is a large decrease of Rx. 19,200 for the reason explained in paragraph 117), Bengal, and Assam, and is due to the high price of rations and to the fear that the famine may have the effect of adding to the Jail population: it is quite possible that it may be found that too great allowance has been made for these two causes, and that the expenditure may be considerably lower than the Estimate. *Jail Expenditure*

150. The increase under Police occurs mainly in the following Provinces:— *Police Expenditur*

	Rx.
Bombay	20,300
North-Western Provinces and Oudh	31,400
Bengal	12,800

The cost of compensation for dearness of provisions accounts for much of these increases: it may prove to have been overestimated. Schemes of improvement in the organisation of the Police costing money are in progress in several Provinces, and the expenditure involved cannot be altogether stopped even in a year of straitened means like the present.

151. The increase under Railway and Irrigation Interest is the interest on the new Capital Expenditure. *Railway and Irrigation Interest.*

152. The increase under Subsidised Railways is caused by the rapidly increasing number of new branch lines and extensions of Railways belonging to Companies, all of which receive the Railway land from the Government free of cost. The more important payments for land in 1897-98 are— *Subsidised Railways.*

	Rx.
Mymensingh-Jamalpur Railway	11,500
South Behar Railway	20,000
Brahmaputra-Sultanpore Railway	30,000
Bhagulpur Bausi-Baidyanath Railway	52,500
Branches of the Bengal and North-Western Railway	70,000
Tinnevelly Quilon Railway	15,000
Tapti Valley Railway	17,200

153. Under the following heads the expenditure in India is expected to be less than in the Budget Estimates of 1896-97 :—

	Rx.
Interest	31,600
Marine	52,200
Guaranteed Railways—Surplus Profits, Land, etc.	342,500
Minor Irrigation Works	161,700
Civil Works	359,600
Army	511,200
Special Defences	49,100

154. The reduction in the Interest charge is caused by the transfer to Railway and Irrigation Interest, Rx. 202,800 (see paragraph 151 above), and by the conversion of the bulk of the 3½ per cent loan of 1893-94 to 3 per cent and the discharge of the remainder, Rx. 52,400, counterbalanced by the interest at 3 per cent on the public loan of Rx. 4,000,000 and on the special loan for the currency investment of Rx. 2,048,700 raised this year. The Estimate includes provision for the interest for part of the year on the new loan of Rx. 4,000,000 which is to be raised in the year.

155. The reduction in Marine expenditure occurs mainly as under :—

	Rx.
Royal Indian Marine	16,100
Lower Burma Marine Department	21,700
Upper „ „ „	10,000

In the Royal Indian Marine the loss of the *Warren Hastings* will cause some increase of expenditure, as the hire of transport will cost more than the savings in the salaries and victualling charges of establishments afloat. This increase is, however, more than counterbalanced by reductions in the purchase of marine stores and coal: a larger part of the expenditure on those purchases is taken as recoverable from other Departments on the basis of past actuals, and the supplies for the repair of Her Majesty's ships in the Persian Gulf are for the future to be deducted from expenditure instead of being treated as receipts.

In Lower Burma, the heavy expenditure of 1896-97 was required for the construction of new light ships and lights, and is not necessary next year.

In Upper Burma, two steamers, the *Tammu* and the *Patrick* have been reduced.

156. Under the head Guaranteed Railways—Surplus Profits, Land, etc., there is a reduction of Rx. 431,800 in the payments to the three old Guaranteed Railway Companies on account of their moiety of surplus profits: the decline in the traffic reduces the surplus profits, and on the Bombay, Baroda and Central India Railway the profits will be further reduced by heavy outlay on the renewal of girders. On the other hand, the provision of land for branches of the Companies' Railways will involve the following outlay in 1897-98 :—

	Rx.
Calicut-Cannanore Railway	98,600
Amalner-Jalgaon Railway and Chalisgaon-Dhulia Railway	20,000

157. The decrease in the expenditure on Minor Irrigation Works occurs chiefly in Madras Rx. 96,900: some large irrigation projects have been completed in Madras, and work has not yet been begun on the new schemes in contemplation in the future. In Bengal, Lower Burma, and Bombay also, the expenditure will be decreased by Rx. 27,400, Rx. 19,000, and Rx. 14,800.

158. The reduction under Civil Works is due to the fact that the large Famine outlay and the reduction of Provincial balances necessitate the postponement of all expenditure which it is possible to postpone, both Imperial and Provincial.

Army Expenditure

159. In accounting for the decrease under Army Expenditure in India the first item to be mentioned is the large one of Rx. 394,000, being the initial expenditure on the completion of mobilisation arrangements which was specially provided this year. The provision for expeditions and special services is less by Rx 61,600 than that in the Budget Estimate of 1896-97. There are reductions of Rx. 130,700 in Exchange Compensation Allowance, Rx. 195,300 in the pay of the British Troops, and Rx. 8,400 in the cost of Australian remounts, all due to the rise in the rate of exchange. Lastly, considerable reductions of the grants of the Commissariat, Clothing, and Ordnance Supply Departments have been enforced.

On the other hand, the high prices caused by the scarcity have necessitated increased provision, to the extent of Rx. 399,300, for the cost of food for men and animals and for compensation for dearness of provisions. We hope that this, like other provisions of a similar kind under other heads, may prove to be excessive.

Special Defences

160. As explained in paragraph 162 of the Financial Statement of March last, the expenditure on Special Defences has now been practically completed. Any expenditure of this nature in India which may be required in future will be incurred from the grant for Military Works.

1897-98. Exchange Compensation Allowances.

161. The rate assumed in the Budget Estimate as the average rate, with reference to which Exchange Compensation Allowance will be paid, is 1*s.* 2$\frac{3}{4}$*d.* As the rate for this purpose in the Budget Estimate of 1896-97 was 1*s.* 1$\frac{3}{4}$*d.*, there is a considerable saving under most heads on this item of expenditure, amounting in all to Rx. 315,700.

1897-98. Revenue in England.

162. The estimate of sterling receipts in England does not differ appreciably from that for 1896-97.

1897-98. Expenditure in England.

163. The sterling expenditure will exceed the amount taken in the Budget Estimates of 1896-97 by £179,100.

The heavy expenditure on the construction of Railways and on Famine Relief has seriously diminished the amount of money available in India to meet the drawings of the Secretary of State: it has therefore become necessary to reduce the sales of Council Bills from £16,500,000 to £13,000,000, and for the Secretary of State, in order that he may be able to meet his disbursements, to borrow £3,500,000 in London, in addition to replacing the India Bills for £1,000,000 which he was able to discharge without replacement this year. The sterling interest payments are consequently increased by £61,400. There is an increase of £45,000 in the purchase of stores for the Telegraph Department: it was mentioned in paragraph 124 of the Financial Statement of March last that the stock of stores requires replenishing. There is an increase of £100,500 in the charge for interest on Capital deposited by Railway Companies: the programme of Railway construction sanctioned by the Secretary of State, in addition to the direct borrowing of £3,500,000 by him, necessitates the raising of guaranteed loans by Railway Companies to the extent of £2,050,000, and the interest on them has to be met and charged in the Railway Revenue Account. Under Army, the payments to the War Office are in excess of the Budget Estimate of 1896-97 by £30,000 for Effective Services, and £21,500 for Non-Effective Service: the other Non-Effective Sterling charges are in excess by £44,100; but, on the other hand, the other Effective charges are less by £150,700, the larger part of the reduction being under Stores.

1897-98. Exchange.

164. In 1897-98 the charge for Exchange on the net Sterling Expenditure is less than in the Budget Estimate of 1896-97 by Rx. 1,225,700. The net Sterling Expenditure is more than in the Estimate of 1896-97 by £180,200, and the exchange on this difference at 13$\frac{3}{4}$*d.* the rupee is Rx. 134,300. The direct saving from the rise in the rate of exchange from 13$\frac{3}{4}$*d.* to 14·46*d.* the rupee is therefore Rx. 1,360,000.

Section IV.—Examination of the Estimates under the more important heads of Revenue and Expenditure.

LAND REVENUE.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
REVENUE—	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Including that due to Irrigation—India, General	175,044	143,356	145,711	150,000	151,800	153,100
Central Provinces	692,222	658,389	767,332	864,600	600,000	600,000
Upper Burma	722,809	798,181	757,019	797,000	635,000	627,400
Lower Burma	1,609,106	1,658,524	1,727,985	1,760,000	1,780,000	1,795,500

North-Western Provinces and Oudh	6,054,373	5,872,663	6,134,442	6,113,900	4,914,200	5,927,500
Punjab	2,445,535	2,410,721	2,440,115	2,457,100	2,362,200	2,361,900
Madras	5,488,492	5,594,408	5,592,141	5,601,700	5,207,700	5,776,000
Bombay	4,715,794	4,555,037	4,954,982	4,770,000	4,351,200	4,805,700
TOTAL	26,336,535	26,184,411	27,022,619	27,023,200	24,591,100	26,586,700
Shown under XXIX.—Irrigation	746,926	776,139	821,664	929,900	891,900	940,500
Shown under I.—Land Revenue	25,589,609	25,408,272	26,200,955	26,093,300	23,699,200	25,646,200
EXPENDITURE—						
District Administration	1,836,660	1,845,760	1,875,769	1,900,200	1,875,600	1,898,700
Other Charges	2,184,953	2,202,372	2,221,348	2,275,600	2,218,800	2,268,000
TOTAL	4,021,613	4,048,132	4,097,117	4,175,800	4,094,400	4,166,700

165. The above figures of Revenue reveal with vivid distinctness the effects of the famine. In paragraph 138 of the last Financial Statement the fact was noticed that the progress of Land Revenue had received a check in consequence of the failure of the cold weather rains in Northern India. The failure of the monsoon of 1896 has now caused wholesale retrogression, and the total Land Revenue this year is reduced to an amount lower than any year since 1891-92. A partial recovery is hoped for next year, but we cannot expect to collect a Land Revenue of the full present normal standard until another year has passed. The amounts of the loss of Land Revenue in each Province are stated in paragraphs 103 and 136.

OPIUM.

	Accounts, 1893-94	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
Revenue—	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.

Chests produced	40,506	33,329	35,953	...	45,041	..
Chests in Balance, March 31st	31,745	25,293	23,551	...	29,592	...
Reserve, December 31st	1,814	1,279	—2,652	...	342	...
Bombay—						
Chests passed for export	26,675½	29,577½	25,475½	24,461	21,250½	23,333
Rate of Duty R	600	600 & 650	650	650	650 & 600	600

166. Falling prices for Bengal Opium and a languishing export trade in Malwa Opium account for the diminished Opium Revenue shown above. What the reasons for those conditions are we do not venture to say with any confidence, but what information we have leads us to fear that increased production of Opium in China and more successful competition of the Chinese with the Indian drug are mainly responsible. Detailed explanations regarding Revenue will be found in paragraphs 105 and 139, and regarding Expenditure in paragraphs 123 and 147.

SALT.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Northern India (*a*)	1,838,656	1,894,320	1,905,325	1,930,000	1,900,000	1,947,800
Burma (*b*)	167,590	118,989	156,032	165,000	140,800	150,000
Bengal (*b*)	2,374,133	2,458,219	2,488,620	2,470,000	2,477,500	2,505,400
Madras (*a*)	1,629,776	1,795,354	1,997,489	1,820,000	1,700,900	1,840,200
Bombay (*a*)	2,218,721	2,398,867	2,314,379	2,315,000	2,210,000	2,290,600
TOTAL	8,228,876	8,665,749	8,861,845	8,700,000	8,438,200	8,734,000
Charges	474,405	498,415	521,044	566,900	529,100	570,200

(*a*) Chiefly excise on local manufacture. | (*b*) Chiefly duty on imported salt.

167. The failure of Revenue this year may be ascribed, except in Burma and Madras, to the scarcity and the plague (see paragraph 106). Next year a recovery is expected, and there will also be an increase of about Rx. 50,000 from the enhancement of the duty on Kohat Salt from 8 annas to R2-8 a Lahori

maund. That increase was ordered from the 15th of July last, the main object being to enable the Government to abolish—it is hoped at an early date—the troublesome Indus protective line, the maintenance of which is necessary so long as there is a material difference in the rates of duty on Cis-Indus and Trans-Indus Salt. The measure has produced no increase of Revenue this year, because ample notice was intentionally given of the change and very considerable clearances were effected before the enhancement took effect; but those stocks must now be nearing exhaustion, and an increase of Revenue will certainly be realised next year.

The saving in Expenditure in 1896-97 occurs chiefly in Madras Rx. 26,400: the Madras Government usually overestimates the amount required for expenditure under this head. The charges of the Northern India Salt Department are also less than the Budget Estimate by Rx. 8,000, the manufacturing charges at Sambhar having been lower than expected. In Bengal Rx. 5,000 was provided for a preventive establishment in the salt-bearing districts other than Orissa, but the measure is not yet matured. A provision of Rx. 20,000 is made for the same purpose in 1897-98. After long and careful inquiry the Government of Bengal has been convinced that extensive illicit dealings in Salt are prevalent in some of the coast districts, and it is hoped that a scheme to protect this important branch of the Revenue in Bengal may be matured and sanctioned in time to be brought into operation in 1897-98.

Charges	143,736	174,547	202,948	207,300	202,000	210,700

171. The two important variations under this head are the continued high imports of silver and the falling-off in the exports of rice which has been largely diverted to India in consequence of the scarcity. The other heads will realise this year fairly closely the amounts estimated last March. For next year the imports of silver are taken lower than the actuals of the last three years, as it is not yet considered safe to estimate that these represent the normal annual imports,

and the rice exports are taken about Rx. 50,000 higher than in the Revised Estimate for 1896-97. The duties on cotton goods are also taken approximately at the same amount as in 1896-97: it is quite possible that one effect of the scarcity and distress in India may be to cause a considerable reduction in the imports of cotton goods, but it is not considered necessary to assume this for the estimate, especially as the estimate as a whole is moderate and cautious.

ASSESSED TAXES.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Deduction by Government from Salaries, Pensions, and Interest payments	435,138	450,557	447,688	456,000	442,400	445,000
Other Collections	1,304,033	1,348,503	1,387,501	1,387,200	1,413,100	1,405,300
TOTAL	1,739,171	1,808,060	1,835,189	1,843,200	1,855,500	1,850,300
Charges	31,060	29,771	29,868	31,400	30,300	32,700

172. This Revenue also has suffered from the famine and plague. In Bombay the receipts are expected to fall short of the Budget Estimate of 1896-97 by Rx. 12,700 this year and Rx. 30,200 next year; in the North-Western Provinces and Oudh, by Rx. 7,500 and Rx. 5,000; and in the Punjab, by Rx. 2,000 this year. The other Provinces show moderate progress.

FOREST.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Revenue	1,723,022	1,631,548	1,660,504	1,732,300	1,768,500	1,756,200
Expenditure	906,407	913,449	911,161	1,045,800	999,900	1,076,100
NET	816,615	718,099	749,343	686,500	768,600	680,100

173. This is another head which is suffering from the effects of the famine and from measures taken to relieve the famine-stricken population. The Revenue this year will fall short of the Budget Estimate by Rx. 34,700 in Bombay, Rx. 35,800 in the Central Provinces, and Rx. 16,700 in the North-Western Provinces and Oudh. On the other hand, there are increases of Rx. 74,500 in Burma, Rx. 32,600 in Madras, and Rx. 12,600 in the Punjab. The results for next year are slightly better, and similar in distribution to those for this, except that the very high Revenue in Burma is not assumed to be likely to recur.

INTEREST RECEIPTS.

175. The figures for 1896-97 have been explained in paragraphs 118, 124, and 132. The heavy borrowing to which it has been necessary to resort both in India and in England explains the increase of the total charges for Interest on Debt: that involves a permanent annual addition to the expenditure. The distribution of the total between Ordinary and Public Works Debt is explained in paragraphs 118 and 154.

POST OFFICE, TELEGRAPH, AND MINT.

	Accounts, 1893-94.	Accounts, 1894-95.	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.

176. The Post Office receipts continue to increase satisfactorily. But both this year and next the increase of expenditure is specially heavy: this is due to the famine, the high prices necessitating payment of compensation for dearness of provisions to postal servants on low pay and larger expenditure on the feed of ponies and bullocks employed on the Passenger and Bullock Train Services.

177. The progress of Telegraph receipts has undergone a temporary check. The traffic has not been brisk this year: both this year and next there is a loss of revenue owing to its having been deemed right to reduce the rent charged to Railways for the use of wires and instruments; and next year it is expected that certain arrangements which are in contemplation for the quicker delivery of messages classed as "deferred" may reduce the receipts by causing a larger use of "deferred" instead of "ordinary" messages.

178. The figures of Telegraph expenditure on Revenue Account are normal. The large increase of Telegraph Capital Expenditure is necessitated by the rapid rate of the construction of Railways, as Telegraph lines must be constructed on all new Railways.

179. The increase in the Mint receipts in 1896-97 has been explained in paragraph 110; the expenditure is slightly increased by the large amount of work in the coinage of copper and small silver: the receipts under Gain on copper coinage will be higher than usual next year also, as the demand for copper will continue until it is possible to close the Famine Relief Works: this gain is taken at Rx. 50,000 in the Budget Estimate of 1897-98 as compared with Rx. 122,000 this year.

CIVIL DEPARTMENTS.

	Accounts, 1893-94.	Accounts, 1894-95	Accounts, 1895-96.	1896-97. Budget.	1896-97. Revised.	1897-98, Budget.

(a) Includes Upper Burma charges up to 1896-97.

180. The rise in the rate of exchange will diminish the expenditure under most of these heads by reducing the charges for Exchange Compensation Allowance and for exchange on sterling transactions. On the other hand, the charges under nearly all of them are increased by the rise of prices caused by the scarcity.

181. It will be noticed that, with the exception of Jails and Police, the increase of expenditure under the several heads is at a much lower rate than the usual annual increase: indeed, excluding those two heads (and on the other side the Exchange on sterling expenditure), the total expenditure is less than the Budget Estimate of 1896-97. The severe strain thrown on the Revenues, both Imperial and Provincial, by the famine has rendered necessary the exercise of rigid economy wherever economy is possible.

182. The expenditure on Jails is specially high both this year and next: the rise in prices, besides causing expenditure on compensations for dearness of provisions, as under the other heads of the group, increases the cost of the prisoners' rations. Under Police the expenditure on compensation for dearness of provisions is higher than under any other head; and it is also necessary to continue the progress already begun in costly schemes of improvement in Police administration.

Net Charge on account of the Bengal-Nagpur and the Indian Midland Railways shown in the Railway Revenue Account	371,768	389,765	413,515	401,500	435,600	456,500
TOTAL EXPENDITURE CHARGEABLE TO THE FAMINE GRANT	1,489,569	1,000,000	1,000,000	1,000,000	2,448,500	4,122,700

184. This expenditure is the main feature of the finances of both years, and has been so fully discussed in preceding paragraphs of this Statement that it is unnecessary to add anything here, except to notice that as the direct charges for Famine Relief largely exceed the limit fixed in normal years for the Famine Insurance Grant, it has been necessary to remove the charges for the construction of Protective Railways from the head: the expenditure on them, however, is being continued, the charges being shown under Head 48 of Expenditure not charged to Revenue, a course which is permissible as the Railways are expected to yield a return of 4 per cent when completed.

185. The variations in the Estimates of the Receipts, Working Expenses, Interest, and Surplus Profits and other charges in India have been explained in paragraphs 104, 118, 126, 127, 137, 151, and 156. The increase in the sterling interest charge of State Railways occurs on the Capital deposited by Companies, and is due to the fact that borrowing through Companies is necessary in order to carry out the programme of Railway Construction which has been sanctioned. The rise in the rate of exchange causes a large saving in the Exchange on the sterling charges, and this makes the figures in the line for Net Result in the above table appear much more favourable than they in a sense really are.

As already explained, the poorness of the results of the Railway Revenue Account may be entirely ascribed to the scarcity and the plague. As soon as the clouds of famine and plague disperse, the Railway Revenue may be expected to advance very rapidly.

IRRIGATION.

186. It has been explained in paragraphs 109 and 141 above that the increases in the receipts from Major Works are due mainly to the failure of the rains : the same is true of the smaller increases in the receipts from Minor Works.

In 1897-98, notwithstanding the need for economy in view of the general position, it is not possible to avoid some increase in the Working Expenses of Major Works, as new works are being constructed from borrowed money every year, and these must be maintained; but a considerable reduction has been effected in the expenditure on Minor Works.

187. The financial results obtained during 1894-95 and 1895-96 from Irrigation Works for which capital and revenue accounts are kept are given below :—

	1894-95.	1895-96
MAJOR WORKS.	Rx.	Rx.
Capital Outlay—		
Direct and Indirect . . During the year . .	695,032	788,997

Receipts	276,546	276,984	292,671	280,900	291,000	293,500

188. Regarding Military Works reference may be made to paragraph 128.

189. Under Civil Works the expenditure in 1896-97 on Imperial and Provincial Works has been kept below the Budget Estimates. But the Local expenditure shows a considerable excess in Madras (Rx. 41,100), Bengal (Rx. 42,200), and Bombay (Rx. 37,400).

In 1897-98 the Upper Burma expenditure (Rx. 275,000) is transferred from Imperial to Provincial, as that Province will now be included with Lower Burma in a Provincial Settlement. Allowance being made for that change, it will be seen that large reductions of grants have been enforced both under Imperial and Provincial. The Local expenditure, though higher than the Budget Estimate of 1896-97, is lower than the Revised Estimate.

190. It is not necessary to add anything to the remarks on this head contained in paragraphs 129, 132, 159, and 163.

SPECIAL DEFENCE WORKS.

191. The following table shows the expenditure on "Special Defence Works":—

	Rx.
To end of 1886-87	150,409
1886-87	325,626
1887-88	456,017
1888-89	789,595
1889 90	689,481
1890-91	491,837
1891-92	604,848
1892-93	458,060
1893-94	324,974
1894-95	217,867
1895-96	101,349
1896-97, Budget Estimate Rx. 57,500; Revised Estimate	123,500
1897-98, Budget „	19,400
	4,752,963

192. This head will now be closed so far as Expenditure in India is concerned: but the outlay on armaments for the Defence Works incurred in England will still be charged to it.

Section V.—Capital Expenditure on Public Works not charged against Revenue.

193. As explained in paragraph 163 of the Financial Statement of March 1896, the programme of Capital Expenditure during 1896-97 was fixed at Rx. 6,730,200 made up of—

	Rx.
Railways	5,980,200
Irrigation	750,000

Of the Railway grant, Rx. 473,500 was shown against the Famine grant as expenditure on Protective Railways.

During the course of the year the Secretary of State, in dealing with the question of the manner in which funds should be provided for the construction and development of Railways in the hands of Companies, expressed his willingness to agree to the expenditure of a sum of about 27 crores of rupees upon the extension of Indian Railways during the years 1896-97, 1897-98, and 1898-99. The Government of India thereupon drew up a forecast of the expenditure they proposed to incur during these years, and explained that, in view of the works already sanctioned and commenced during 1896-97, they found some difficulty in placing the total at a lower figure than 28 crores, or including the branches of the old Guaranteed Lines 29·66 crores of rupees. This programme, which has been accepted by the Secretary of State, provided for expenditure as follows:—

	Rx.	Rx.
1896-97	10,174,700	
1897-98	10,130,000	
1898-99	7,695,300	
Total	...	28,000,000
Add—for Guaranteed Railway Extensions	...	1,665,000
GRAND TOTAL	...	29,665,000

This expenditure was to be provided thus :—

	1896-97. Rx.	1897-98. Rx.	1898-99. Rx.
From Imperial funds . . .	5,980,200	6,420,000	5,405,300
Capital of Indian Railway Companies	4,194,500	3,710,000	2,290,000

and was to be expended—

By State Agency	3,629,000	3,320,000	2,705,300
By the Agency of Companies . .	6,545,700	6,810,000	4,990,000

The expenditure by the Guaranteed Companies was not set down against any particular year, and it is now estimated that very little outlay will be incurred on these branch lines until 1898-99. The whole of the Rx. 1,665,000 may therefore be taken in that year.

In addition to this, it was anticipated that expenditure would be incurred by the Agency of Branch Line Companies and Companies outside the accounts of the Government of India, which brought the total programme for 1896-97 up to a figure in excess of 12 crores of rupees.

The grant of Rx. 5,980,200 for expenditure from Imperial funds was modified during the year by the transfer of the Burma Railways to a Company, with effect from September 1, 1896, the balance of the expenditure of the year from that date, estimated at Rx. 585,400, being met from the Company's Capital.

The Assam-Bengal Railway Company and the East Indian Railway Company were unable to spend their grants, and the Bengal and North-Western Railway Company failed also to spend the amount provided for the extensions of the Tirhoot State Railway. The short expenditure amounted to Rx. 830,400. It was arranged that the expenditure on the East Indian Railway should be charged to Head 48, that head being credited with the amount of debentures raised by the Company; in consequence of the Company having raised Rx. 757,000 more than they spent, the short outlay under 48 was further increased to Rx. 1,587,400, and the Revised Estimate has been taken at Rx. 3,819,900 for Railways and Rx. 737,500 for Irrigation Works.

As regards the expenditure to be met from Companies' capital, which was estimated at Rx. 4,194,500 (including Rx. 737,800 for the East Indian Railway which has since been transferred to Imperial funds), the Indian Midland Railway Company and the Bengal-Nagpur Company failed to spend the grants provided for them, and the Revised Estimate has been taken at Rx. 3,501,400.

The total expenditure of the year, as compared with the Rx. 10,174,700 provided in the forecast, amounts to—

	Rx.
Imperial funds	5,256,900
Capital of Indian Railway Companies	3,501,400
TOTAL .	8,758,300

In addition to the above sum, the Branch Lines Companies and the other Companies whose accounts are not incorporated in the Government accounts, are expected to spend during the year Rx. 2,118,200, making a total of Rx. 11,228,500 for all Railways in India.

194. As regards 1897-98, the amount provided in the forecast is Rx. 10,130,000, of which Rx. 6,420,000 is to be provided from Imperial funds and Rx. 3,710,000 from Companies' capital. Allowing for the transfer of the Burma Railways to a Company and for the special treatment of the East Indian Railway

debentures, as well as for the provision for expenditure in England on the Assam-Bengal Railway, the Estimate for Capital Expenditure not charged to Revenue has been prepared for—

	Rx.
Railways	5,838,600
Irrigation	750,000
TOTAL	6,588,600

The expenditure on the East Indian Railway from debentures, amounting to Rx. 662,100, should be added to the above figure to give the total outlay on State Railways. In addition to the above, further capital expenditure, as noted below, will also be incurred next year on Railways :—

	Rx.
Capital Account of Indian Railway Companies including the extensions of the Bengal-Nagpur and Indian Midland Railways	3,629,300
Branch Line Companies—	
Ahmedabad-Parantij, Brahmaputra-Sultanpur, Mymensingh-Jamalpur, South Behar, and Tapti Valley Railways	1,609,800
Outside the Government Accounts—	
Bengal and North-Western Railway extensions	806,000
Southern Punjab	724,600
Segowlie-Rakhsal	55,000
Earsi	8,400
Nilgiri	80,000
TOTAL	6,913,100

The total of the programme for Capital Expenditure on Railways and Irrigation Works in 1897-98 accordingly exceeds 14 crores of rupees.

48.—STATE RAILWAYS—CONSTRUCTION.

195. The Budget grant for 1895-96 amounted to Rx. 3,700,000 as under :—

	Rx.
Amount provided under "Not charged to Revenue"	4,400,000
Deduct—Provision for Irrigation Works	700,000
Leaving for Railways under 48	3,700,000

196. The Revised Estimate provided for a total expenditure of Rx. 4,157,000 as under :—

	Rx.
Amount provided under "Not charged to Revenue"	4,327,200
Deduct—Provision for Irrigation Works	705,000
Leaving for Railways under 48	3,622,200
Provided under "34.—Construction of Protective Railways"	534,800
TOTAL	4,157,000

against which the actual expenditure incurred amounted to Rx. 3,917,094, thus falling short of the Revised Estimate by Rx. 239,906 and exceeding the Budget provision by Rx. 217,094. Of moneys placed at his disposal up to 30th November 1895 (date of despatch of indents from India), the Secretary of State was unable to spend £108,938, which sum, with exchange and charges upon it, amounted to Rx. 192,664.

197. The amounts provided for Railway Construction this year and next are, as explained above, Revised Estimate, 1896-97, Rx. 3,819,900, and Budget Estimate, 1897-98, Rx. 5,838,600, the distribution of which is as follows :—

	Revised Estimate, 1896-97. Rx.	Budget Estimate, 1897-98. Rx.
Expenditure by State Agency—

Remittances from India, net—			
(*a*) Railway Companies' Remittances	117,200	—194,300	500,500
(*b*) Family and other Remittances	194,400	43,700	228,000
Add— Closing Balance	2,463,824	2,814,698	2,271,298
TOTAL	27,651,624	26,536,698	25,810,498

200. In the Budget Estimate of 1896-97 the net disbursements of the Home Treasury, excluding Loans and Council Bills, were taken at £17,917,200 : it was proposed to provide £16,500,000 of this by the sale of Bills on India, and to meet £1,330,900 by a reduction of cash balances. Owing to the heavy loss of

1896-97. General Summ

Land Revenue caused by the scarcity in November and December last, and the large expenditure on Famine Relief during this cold weather, the Secretary of State, at the request of the Government of India, reduced the scale of his drawings, and it is now expected that the total drawings in the current year will be less than the original estimate by £1,200,000. The cash balances in the Home Treasury on April 1, 1896 were also less than the estimate by £400,926, owing mainly to a decrease in the drawings at the end of 1895-96. The total reduction in Council Bills thus amounted to £1,600,926. On the other hand, the net disbursements during 1896-97 are expected to be lower than the original estimate by £2,956,900, in consequence chiefly of large receipts from Railway Companies. The new Burma Railway Company has paid in subscribed capital to the extent of £1,836,500, and the East Indian Railway Company has issued additional debentures for £400,000. There have also been the usual savings on the Estimates of Expenditure both by the Government and the Railway Companies. This improvement in his cash balance enables the Secretary of State to discharge without replacing £1,000,000 out of the £2,500,000 of the twelve months' India Bills which fell due this year. The payment of that £1,000,000 reduces the cash balance of March 31, 1897, so that it will exceed the Budget Estimate by £350,874 only.

201. No increase to the sterling debt has been made in 1896-97, but in accordance with the intention announced in paragraph 173 of the last Financial Statement, India Stock for £2,400,000 were issued in April 1896 in order to discharge £2,000,000 India Debentures and £313,700 South Indian Railway Debentures. Taking advantage of the favourable state of the money market, the Secretary of State decided to issue the new Stock at 2½ per cent, and tenders for the loan were invited on April 28, 1896. The result was satisfactory: the total amount tendered was more than £6,000,000; the average rate at which the loan was raised was £103 0*s.* 6*d.* per cent, and the minimum rate of accepted tenders £102 16*s.* 0*d.*

202. It was the original intention to issue an equivalent amount of new India Bills to repay temporary debt (India Bills) falling due in the year; but, as above explained, it has not been necessary to do this to the full amount, and according to the present programme only £1,500,000 will be raised and £2,500,000 discharged during the year, the additional £1,000,000 being met from cash balances.

203. The net issues to Railway Companies during 1896-97 were taken in the Budget Estimates at £628,100, but it is now estimated that there will be a net receipt from the Companies of £1,546,200. The following are the details:—

	Budget. £	Revised. £
RECEIPTS.		
Subscribed capital—		
(*a*) State Lines	1,399,000	2,783,100
(*b*) Guaranteed Lines	1,550,000	1,153,500
Miscellaneous	3,000	6,700
TOTAL .	2,952,000	3,943,300
ISSUES.		
For discharge of debentures—		
(*a*) State Railways	582,900	126,800
(*b*) Guaranteed Lines	1,150,000	744,400
For Stores, Establishment Charges, etc.—		
(*a*) State Railways	1,080,200	1,012,700
(*b*) Guaranteed Lines	767,000	513,200
TOTAL .	3,580,100	2,397,100

Of the total new capital of £2,949,000 entered in the Budget Estimate, the sum of £1,732,900 was intended for discharge of debentures, leaving £1,216,100 as required for expenditure. Some of the debentures have been renewed instead of being discharged, but the new capital for expenditure according to the Revised Estimate amounts to £3,065,400. This large increase of £1,849,300 over the Budget Estimate is due to the formation of a new Company to take up the Burma Railway from September 1, 1896. As already stated in paragraph 200, the total receipts from this Company on account of subscribed capital are estimated at £1,836,500.

The requirements of the Railway Companies for stores, establishment charges, etc., were overestimated, and the programmes of the Companies are always liable to important changes.

Railway Companies' Remittances.

204. The Railway Companies whose transactions are above dealt with have separate capital deposit accounts in England, and funds withdrawn in England are directly brought to account in the Home Treasury. But closely connected with these are the Remittance transactions of Railway Companies working State lines in India, such as the East Indian, the South Indian, and the Rajputana-Malwa Railways. Advances are made to these Companies in England for the purchase of stores, etc., and the advances adjusted in India by debit to the Revenue Accounts of the lines, but funds raised for Capital Expenditure by the East Indian Railway Company under the authority of the East Indian Railway Company's Act are also treated as remittances. The estimate of the remittances of the Companies was taken at £117,200 in the Budget Estimate, but in the Revised Estimate there is entered a net receipt in England of £194,300. The following are the details of the transactions :—

	Budget.	Revised.
	£	£
Advances for purchase of Stores—		
East Indian Railway	360,000	407,500
Rajputana-Malwa	50,000	43,600
South Indian Railway	92,300	58,300
Bengal and North-Western Railway	16,900	101,400
	519,200	610,800
East Indian Railway Debentures	400,000	802,500
Transfer fees, etc.	2,000	2,600
	402,000	805,100
Net Remittance from India	117,200	—194,300

The net improvement in the receipts of £311,500 is due to the issue of £400,000 additional debentures by the East Indian Railway Company.

Family and other Remittances.

205. The net payments on account of family and other remittances from India will be £150,700 less than the Budget Estimate, owing mainly to the recovery from Her Majesty's Imperial Government of the extra charges connected with the employment of Indian Native Troops at Suakin.

1897-98. Home Treasury Ways and Means.

206. The net disbursements at the Home Treasury in 1897-98, excluding Loans and Council Bills, are estimated at £18,043,400. It is not, however, possible for the Government of India to supply the whole of this amount by means of Council Bills next year, and the Secretary of State has, with reference to the probable famine requirements in India, and to the expenditure on railway construction, reduced his estimate of drawings to £13,000,000. The reduced drawings will be supplemented by a sterling loan of £3,500,000 to be raised by the issue of India Stock and by a temporary loan of £2,000,000, of which £1,000,000

will replace a like amount of India Bills issued in the current year, and the other £1,000,000 will replace the amount of India Bills which it was possible, as above explained, to discharge without replacement this year. The last amount will be additional debt so far as the year 1897-98 is concerned.

According to the programme now announced the net disbursements of the Home Treasury will be met, in the year 1897-98, by the sale of Bills on India of £13,000,000, by the creation of additional sterling debt to the extent of £4,500,000, and by a reduction in the cash balances of £543,400.

207. It should be understood that in stating the present intentions of the Secretary of State no sort of pledge is given that he will adhere to the programme.

INDIA.

208. The following is a summary of the Estimate of Ways and Means in India:—

	1896-97.		1897-98
	Budget.	Revised	Budget
RECEIPTS.	Rx.	Rx.	Rx.
1. Excess of Revenue in India over the Expenditure charged against it	27,928,300	23,844,700	23,955,700
2. Rupee Loan	4,000,000	6,048,700	4,000,000
3. Increase of the Unfunded Debt, mostly Savings Bank Deposits, net	831,100	—317,300	502,400

7. Expenditure not charged to Revenue	4,080,000	2,738,800	4 790,600
8. Rupee Debt discharged	275,000	717,000	575,100
9. Loans to Municipalities, etc, net	406,100	764,700	243 400
10. *Issues on Capital Account to Railway Companies, net*	1 526,400	964,600	956,300
11. Council Bills—*Sterling Amount*	16,503,400	15,288,300	13,925,300
12. Do. Exchange	12,296,600	10,109 700	8 551,700
Add—Closing Balance	14,055,988	13,465,810	13,321,710
TOTAL	50,029,888	45,277,410	42,659,110

The headings in italics are connected with, and explained by, the corresponding figures of the Secretary of State's account in England. The others refer to purely Indian transactions.

209. The net Revenues in India were taken in the Budget Estimate of 1896-97 at Rx. 27,928,300, but owing to heavy loss of Revenue and increase in Expenditure caused by the famine, they are now estimated to yield only Rx. 23,844,700. This large deficiency of Rx. 4,083,600 in the Revenues is further increased by withdrawals from the Savings Banks and increased loans for famine

relief purposes. The Savings Bank transactions are expected to result in a net withdrawal of Rx. 241,100 against a net receipt of Rx. 750,800 entered in the Budget Estimate, and the net amount of loans will exceed that estimate by Rx. 358,600. The total diminution of the cash balances under the three heads mentioned thus amounts to Rx. 5,434,100. The deficiency is met chiefly by a reduction in Council Bill payments of Rx. 3,402,000 and the issue of a loan, not contemplated in the Budget Estimates, for Rx. 2,048,700 for the investment of two crores of the Currency Reserve. The year is now expected to close with a cash balance of Rx. 13,465,810.

210. The important disbursements—in India and England taken together—for which we have to provide in 1897-98, otherwise than from the Revenues of the year, are (1) the deficit in the Revenue Account both on Imperial and Provincial Account, (2) the Capital Expenditure of Government not charged to Revenues, and (3) the advances to Railway Companies for Capital Expenditure. The deficit in the Revenue Account, including the expenditure of the Provincial Governments from balances, is estimated at Rx. 3,654,000. The total estimate of Capital Expenditure by the Government not charged to Revenue amounts to Rx. 6,588,600, including Rx. 1,130,700 on account of the Assam-Bengal Railway, Rx. 537,900 for the East Indian Railway, and Rx. 600,000 for the Tirhoot Railway Extension; and we have undertaken to advance in 1897-98 Rx. 1,174,500 to the Indian Midland and Bengal-Nagpur Railways for expenditure in India on new extensions. The total of the disbursements above mentioned amounts to Rx. 11,417,100. Our cash balances are now reduced to as low a level as is consistent with our requirements in the months of minimum balance—November and December—, and they cannot be drawn upon to meet any substantial portion of the above sum. We must, therefore, have recourse to loans; and it is intended to raise Rx. 4,000,000 by a rupee loan in India, and to meet the remainder of the liability by the sterling loans in England mentioned in paragraph 206, the Secretary of State's drawings being reduced.

211. It was announced in paragraph 178 of the last Financial Statement that a new loan of Rx. 4,000,000 would be raised in India in 1896-97. This loan was issued on June 22, and tenders for it were received on July 22. The favourable state of the money market at the time enabled the Government to issue the loan at 3 per cent, and in spite of the reduced rate of interest the average price of the loan was R103-1-10½ per cent.

212. As the price of the new 3 per cent loan remained above par for some time after its issue, it was decided to offer the balance of the unguaranteed 3½ per cent loans, amounting to Rx. 5,684,950, for conversion into the new loan. Accordingly, by Notification No. 3850, dated September 4, 1896, the 3½ per cent loans of 1853-54 and 1893-94 were notified for discharge on January 30, 1897, and the option was given to holders of notes of the 3½ per cent loans to tender them for transfer to the 3 per cent loan of 1896-97 by October 2, 1896. The amount of the 3½ per cent loans transferred to 3 per cents in exercise of this option was Rx. 4,887,160, leaving Rx. 797,790 to be discharged. Provision has been made in the present estimates for the discharge of Rx. 360,000 in 1896-97 and Rx. 350,000 in 1897-98.

213. The question of increasing the investment of the Government Currency Reserve by 2 crores of rupees had been considered by the Government last year, and it was in contemplation to make the necessary change in the Paper Currency Act in the present session. As soon as it was ascertained towards the middle of October that the famine would entail heavy loss of Revenue and increase in Expenditure, we were compelled to ask the Secretary of State to reduce his drawings. The Secretary of State announced the necessary reduction, and this, combined with low Government balances and other causes, produced considerable

tightness in the money market in November and December. To relieve this tightness by making available to the commercial public through increased Council Bill drawings and through the Presidency Banks the additional two crores which the measure would set free from the Currency Reserve, Act XXI of 1896 was passed on December 17, and Government Promissory Notes for Rx. 2,048,650 of the 3 per cent loan were issued to the Currency Department on December 18 1896: see Notifications Nos. 5366 and 5367 of the latter date.

214. The balance of the 3 per cent loan on 31st March 1897 will be Rx. 10,935,860, and, as already stated, it is the present intention to increase that balance by the issue of a new loan for Rx. 4,000,000 in 1897-98. Although this is the present intention, full liberty is reserved, as usual, to alter the programme, as now announced, to any extent that may be considered desirable.

215. The following table gives the details of the transactions of Savings Banks during the last few years and the estimated transactions for 1896-97 and 1897-98:—

Year.	Net additions to deposits, cash.	Interest.	Total addition.
1888-89	685,200	261,800	947,000
1889-90	—362,900	272,200	—90,700
1890-91	250,700	279,700	530,400
1891-92	517,900	306,200	824,100
1892-93	548,900	339,400	888,300
1893-94	179,900	368,000	547,900
1894-95	— 84,500	297,000	212,500
1895-96	247,700	338,500	586,200
1896-97, Budget	422,000	328,800	750,800
1896-97, Revised	—589,600	348,500	—241,100
1897-98, Budget	78,000	350,000	428,000

The high price of food-grains and the prevalence of distress have probably caused withdrawals from Savings Banks in the current year. It should be noted, however, that Rx. 230,000 of net additions in 1895-96, and the same amount of net withdrawals of 1896-97, should be taken against each other, being transactions on account of a large Provident Fund which for a time was held on Savings Bank Account. Corrected for this the figures for the three years stand:—

	Rx.
1894-95	—84,500
1895-96	+ 17,700
1896-97, Revised	—359,600

For 1897-98 no increase in the net deposits in Post Office Savings Banks is anticipated; but the normal additions to the several departmental Provident Funds are taken into account.

216. The net issues on account of loans by the Government to Municipalities, etc., in 1896-97 are now expected to be Rx. 764,700 against Rx. 406,100 entered in the Budget Estimate—an increase of Rx. 358,600. This increase is the difference between the increases in the gross advances of Rx. 436,800 and in the recoveries of Rx. 78,200. The increased advances represent loans to agriculturists and others in provinces affected by famine and scarcity. the additional grants for such advances sanctioned by the Government of India during the year amounted to Rx. 663,000. Provision has been made in the Budget Estimate of 1897-98 for net issues on account of loans to the extent of Rx. 245,400. According to estimates furnished by the several Local Govern-

ments, large amounts may be usefully spent in the provinces by Municipalities and other Local Bodies on drainage and waterworks, but the Government of India have not been able to provide for the whole of the requirements out of their balances in 1897-98. This inability is due to the fact that we are obliged to provide fully, as a first claim upon our resources, for the whole amount of advances and loans required in connection with the famine or plague, and that after providing for such requirements there is no margin of available funds to be lent to Local Bodies for ordinary works of public improvement. If funds are urgently required for such works in 1897-98, the local authorities concerned will, it is hoped, be able to raise them directly in the open market.

Cash Balances.

217. The year 1897-98 is estimated to close with a cash balance in the Indian Treasuries of Rx. 13,321,710, which is less than the opening balance of the year by Rx. 144,100 only.

Section VII.—Summary.

218. The principal features in this Statement are—

(1) The Accounts of 1895-96 closed with a surplus of Rx. 1,533,998.

(2) The Revised Estimates of 1896-97 show a deficit of Rx. 1,986,900. The cause of the deficit is the failure of the monsoon and the consequent scarcity and famine. There is a direct expenditure on Famine Relief of Rx. 1,965,700: the scarcity has also caused a loss of Land Revenue of Rx. 2,432,100, a loss of Railway Revenue of Rx. 1,420,000, and smaller losses under other heads of Revenue, as well as increases of expenditure under many of the ordinary heads. In Bombay the plague has been added to the famine, and joined with it in bringing about these losses. In addition, there is a loss of Opium Revenue of Rx. 508,600 caused by a fall in the price realised for Bengal Opium and a reduction in the exports of Malwa Opium. On the other hand, the rise in the rate of exchange from $13\frac{3}{4}d.$ to $14{\cdot}46d.$ the rupee secures a saving of Rx. 1,329,700 in the exchange on sterling payments.

(3) The Budget Estimates of 1897-98 show a deficit of Rx. 2,464,000. The famine accounts for this deficit also.

(4) The expenditure on Famine Relief is estimated at Rx. 3,641,200 the loss of Land Revenue at Rx. 436,500: the loss of Railway Revenue at Rx. 901,300; and the famine also causes other losses of Revenue and increases of Expenditure.

(5) The loss of Opium Revenue amounts to Rx. 1,079,100.

(6) The rise in the rate of exchange from $13\frac{3}{4}d.$ to $14{\cdot}46d.$ the rupee will secure a saving of Rx. 1,360,000 in the exchange on sterling payments, as well as savings in the pay of the British Troops and in the cost of Exchange Compensation Allowances. There will also be a considerable reduction in the Military expenditure, as the heavy expenditure on preparations for mobilization, which was specially provided for in 1896-97, will not recur.

(7) The Capital Expenditure on Railways is expected to be as follows:—

	1896-97. Rx.	1897-98. Rx.
On State Railways (including expenditure on the East Indian Railway and the Assam-Bengal Railway from capital raised by the Companies)	5,767,700	6,700,000
On Railways of the Companies under contract with the Government from funds raised by them	2,990,600	3,430,000
On Railways of Companies outside the Government Accounts, and Branch Lines	2,470,200	3,283,800

(8) It is expected that the Secretary of State will sell Council Bills for £15,300,000 in 1896-97 and for £13,000,000 in 1897-98.

(9) In 1896-97 the Secretary of State raised a loan of £2,400,000 by the issue of 2½ per cent India Stock to discharge debentures which fell due; and he paid off India Bills falling due in the year for £2,500,000, and issued India Bills for £1,500,000. In 1897-98 he intends to raise a loan of £3,500,000 by the issue of India Stock, to issue India Bills for £2,000,000, and to pay off India Bills falling due for £1,000,000.

(10) These announcements are accompanied by the usual reservation of entire liberty to the Secretary of State to vary the amounts to be obtained by Bills or raised by loans, as he may find occasion.

(11) The Government of India raised a public loan of Rx. 4,000,000 in 1896-97 at 3 per cent, and also issued new 3 per cent paper to the Head Commissioner of Paper Currency for the investment of Rx. 2,000,000 of the Currency Reserve authorised by Act XXI of 1896 passed on December 17. It is intended to raise a loan for Rx. 4,000,000 in 1897-98. Full liberty is, however, reserved to the Government of India to vary this intention in any way and to any extent which may be expedient. The 3½ per cent loan of 1893-94 was successfully converted to 3 per cent in 1896-97.

(12) The Government of India are for the time in serious financial difficulties caused by the famine. When that calamity and the plague in Bombay and Sind shall have passed away, the Government will, it is hoped, be found to be in a strong financial position.

J. WESTLAND.

CALCUTTA:
March 19, 1897.

evenues of India, in India and in England.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from the Local Gazettes, and give the District details of the Provincial totals published weekly in the Crop and Weather Summary in the *Gazette of India*.

Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from persons gratuitously relieved in poor-houses or at their homes.

Resolutions on the proceedings of the agricultural conferences of 1893 and of 1895-96.

FIRST RESOLUTION.

Prefatory.

IN October 1893 a conference was held at Simla attended by delegates from all Provinces for the purpose of discussing the scheme of agricultural enquiry and improvement, for the promotion of which departments of land records and agriculture had been constituted under orders issued by the Secretary of State in 1881. The report of the Conference of 1893 was circulated to all local governments and administrations for preliminary consideration, with Resolution No. 2, dated 31st January 1894.

In a subsequent Resolution No. 15, dated 7th September 1895, each provincial government was invited to arrange for a local conference which should discuss the question how far the proposals and recommendations embodied in the report of 1893 could be adapted to the circumstances of the province addressed. The proceedings of all conferences, together with the views of all local governments and administrations thereon, are now before the Government of India who, as intimated in 1894, will deal with the subjects concerned in a series of separate Resolutions.

The present or *first* Resolution will be confined to an historical summary of the circumstances which have led up to the present position, and to a brief statement of the subjects which will be dealt with in the Resolutions to which it is a preface.

2. The policy of creating special departments to investigate the conditions of agriculture in India with a view to agricultural improvement was first brought forward in 1866 by the Commission appointed to deal with the Orissa famine, and the subject was brought under very full consideration by Lord Mayo's Government in 1870. The result of the deliberations then held was an important scheme for the constitution of both imperial and provincial departments of agriculture. It was represented to Her Majesty's Secretary of State that while a central department was necessary for co-ordinating the programme of enquiry and the results of investigation, yet that the 'real work of studying and improving agriculture must rest with provincial departments'. It was proposed therefore that a department should be created in every province under the control of an official director. In accordance however with the Secretary of State's instructions the step first taken was the formation in 1871 of a new branch of the imperial secretariat which was to deal with the development of the general scheme. This measure was followed in 1875 by the establishment of a provincial department of agriculture in the North-Western Provinces by Sir John Strachey who had as a member of Lord Mayo's Government taken a leading part in the original programme. Further development was checked by the financial difficulties which were due to the famine and scarcity prevailing in 1876, 1877 and 1878, and which not only prevented new action in the provinces but led to the temporary suppression of the imperial department in 1879. It is interesting however to note that the very famine which thus arrested progress brought about the resuscitation of Lord Mayo's scheme on a wider and firmer basis by attracting renewed attention to the importance of improving Indian agriculture. The original scheme had been initiated by the Commission which dealt with the Orissa famine. The revised scheme was put forward ten years later by the 'Famine Commission' which investigated the causes and phenomena of famine in all parts of India. The fact that the creation of agricultural departments has thus been twice due to the deliberate and unprejudiced conclusions formed by special Commissions appointed to advise the Government on the action which should be taken to cope with famine and scarcity, brings into prominent importance at the present time, when the empire is again suffering

from a widespread failure of the harvests, all questions relating to the development of the scheme for agricultural improvement.

3. The Famine Commission was sent out in 1878 to this country at the instance of Parliament with a mission to enquire "how far it is possible for Government, by its action, to diminish the severity of famines or to place the people in a better condition for enduring them." The Commissioners, after a prolonged tour through India, submitted their report in 1880. They gave prominent consideration to the desirability of extending railways and communications; of enlarging the canal system; and of otherwise expanding the large protective works of the country. They also suggested the measures which should be taken on the actual occurrence of scarcity or famine. But the greater part of their report was occupied with recommendations for the reform of land administration and for the promotion of agricultural improvement. They considered that agricultural prosperity in ordinary times was the best shield against the difficulties and trials of a season of drought, and insisted on the necessity of taking every measure which might, on the one hand, prevent or minimize agricultural loss and distress, or, on the other hand, tend to increase and improve the produce of agricultural land. They advised that for dealing with these matters imperial and provincial departments of agriculture should be established.

4. In pursuance of the Famine Commissioners' advice an imperial department was created in 1881, which at once, under the instructions of Her Majesty's Secretary of State, took measures to arrange with the local Governments for the organization of provincial departments. In an opening Resolution of 1881, the duties of the new departments were summed up by the Government of India, following the Secretary of State, as agricultural enquiry, agricultural improvement, and famine relief. The third of these duties, which is concerned with the conduct of operations in the actual event of scarcity, has been dealt with in the famine codes drawn up in 1882 and revised in recent years, and forms no part of the discussions now under review. Present considerations are confined to the measures which should be taken to secure an effective scheme of agricultural enquiry, *i.e.*, the collection of agricultural information, facts and statistics, and to open the way to improvements in agricultural methods and practices.

5. No pains were spared by the imperial and provincial Governments to subject the recommendations of the Famine Commissioners to the most intelligent criticism that could be brought to bear upon them. Every scheme or measure of importance that was from time to time proposed or suggested was placed before a conference at which every province concerned was represented by selected officials and experts connected with the administration of land or with the conduct of the agricultural departments. Thus in, 1882, a *first* conference was convened at Calcutta at which the principles were determined on which future cadastral surveys which are the basis of agricultural statistics should be conducted. A *second* general conference, held at Calcutta in 1883, prepared a scheme for the registration of inland trade statistics, and for the compilation and publication of agricultural and trade returns. A *third* at Delhi in 1888 dealt with the important subject of agricultural education.

6. In 1889, correspondence with Her Majesty's Secretary of State led to an important event in the history of the agricultural programme, *viz.*, the deputation to India of a second Commission from home in the person of Dr. Voelcker, consulting chemist to the Royal Agricultural Society, whose mission was 'to advise on the best course to be adopted in order to apply the teachings of agricultural chemistry, and in order to effect improvements in Indian agriculture.' Every branch of agricultural enquiry and reform was thus to be open to his examination. Dr. Voelcker, following the example of the Famine Commissioners, made a tour through India and gained a general knowledge of the directions in which agricultural enquiry and improvement might be developed. His report may be viewed as an amplification in detail of the recommendations of the Famine Commissioners, with which in all important matters his views were in general accord.

In every province he had the opportunity of consulting the local authorities, and before writing his report had the advantage of meeting at Simla, a *fourth* general conference of delegates and experts from all provinces who

went over with him the whole ground of the Famine Commissioners' recommendations so far as they applied to agricultural enquiry and improvement. His report when received two years later was submitted at Simla in 1893 to the consideration of a *fifth* general conference, whose recommendations have now been separately discussed by a committee of selected officers at the headquarters of each province.

7. The Governor General in Council is not disposed to regret the time which has been occupied by continuous deliberation. The scheme of 1880 was so vast in its design, so important in its objects, so wide in its scope, as to demand that the utmost care and caution should be bestowed on its full development. Material progress has indeed been made. The earlier years of the past decade were occupied in laying the foundations of agricultural enquiry by the organization of land-record establishments, in inaugurating investigation in many important directions, and in developing plans of agricultural experiment. Each successive conference led to further advance and to new measures. But the general principles and policy by which the whole scheme of agricultural enquiry and improvement were to be governed had not been finally or precisely formulated. The very complete examination of the issues left for decision, which has now been made by provincial authorities and local governments, places the Government of India for the first time in a position to amplify, with further approach to precision, the instructions of the Resolution of 1881, in which the duties of imperial and agricultural departments were necessarily sketched only in broad and rough outline. It must be understood, however, that progress has only advanced to one more stage. Every step that is taken in future years will lead to further knowledge of facts and conditions, and will open up new issues. The time may soon come when the combined advice and counsel of provincial authorities, and of the experts by whom they are aided, will again be required for placing provincial and imperial governments in a position to decide what further measures are necessary to secure safe progress.

8. The despatch in which the duties of agricultural departments were formulated by the Secretary of State indicated the desirability of postponing any general consideration of the possibilities of agricultural improvement until a proper system of agricultural enquiry had been set on foot. The Government of India adopted this view. They pointed out, however, that an investigating agency must be established before enquiry could begin. The Resolution of 1881 indicated that the first measure must be the organization of machinery for the continuous collection of facts and statistics concerning the agriculture of the country. Ten years previously Lord Mayo had insisted that the "splendid local machinery of which we are in possession in our local establishments closely connected with the operations of agriculture, should be utilized in the collection and production of those agricultural statistics which are so essential to the development of agricultural progress." The same opinion was held by the Famine Commissioners, and was accepted by both the Secretary of State and the Government of India.

The measures taken to introduce or improve land-records establishments, will form the subject of the *second* Resolution; the system adopted to utilise their services and the agricultural statistics supplied by them will be dealt with in the *third* Resolution.

9. But the scheme of agricultural enquiry, as set forth by the Famine Commissioners and by the Secretary of State in 1880 and 1881, involved the investigation of wider fields than that occupied by the facts and statistics of the land-records. These latter, it is true, supply continuous information regarding crops, irrigation, the occupancy and cultivation of land, and other circumstances connected with agriculture, without which no sound conclusions can be formed as to the general condition and needs of each agricultural tract. But, as pointed out by the Famine Commissioners, and later on by Dr. Voelcker, investigation had to be extended to all matters which affect agricultural prosperity. The character of soils and the manures suited to them; the diseases of cattle; the diseases of plants—their causes, and the means by which they can be prevented, minimized or cured; the extension of irrigation; the effect and value of canal water; the improvement of fuel and fodder supplies; the reclamation of waste lands; meteorological phenomena; economic products; improvement of old, and introduction of new, staples and agricultural implements; possible reforms in the

methods and practices of cultivation: all such subjects as these were to form part of the programme of enquiry.

10. It was evident that in exploring the fields of investigation thus briefly sketched, the agricultural departments, imperial and provincial, must, as the Famine Commissioners had indicated, be assisted by competent experts. Some of the ground indeed had already been occupied by scientific investigators: thus for many years geological officers had been engaged in ascertaining the rocks and strata of each province; systematic botanists had explored and arranged the flora of forests and fields; a meteorological department had laid the foundation of a knowledge of the weather and climates of India; while in some provinces, and notably in Madras, measures had been taken to investigate and improve agricultural conditions. But it was obvious that much more was necessary for the completion of the programme of enquiry, and it was equally clear that the responsibility of directing its gradual expansion must be, for some time to come, divided between the imperial and provincial authorities. In other words, that there must be an imperial as well as a provincial scheme of scientific enquiry. In many directions the work of investigation was national rather than local in character. It demanded the services of first class experts, such as each province could not afford and did not indeed separately require. The existing departments of geology and meteorology were cases in point. Scientific research in such fields could not be restricted to geographical or administrative limits, and would, if confined within narrower limits than those of the empire, involve waste of power and unnecessary expenditure. Influenced by these views, the Government of India accepted the responsibility of widening, under imperial direction, the scheme of national investigation, hitherto covering only a limited portion of the ground which had to be occupied. Thus, economic products, cattle diseases, agricultural entomology, were some of the subjects which were between 1880 and 1890 brought for the first time under systematic enquiry by experts attached to the imperial department.

The general character of the national scheme of scientific enquiry, under imperial direction, the extent to which it has been widened, the directions in which further amplification is necessary or desirable, and the association with it of provincial co-operation, form the subject of the *fourth* Resolution of this series.

11. To provincial departments, under the control and direction of local governments, is left the largest share in the programme of scientific enquiry. It embraces all such investigations by experts as may properly and usefully be confined within geographical and administrative limits and includes therefore almost all enquiries and efforts directly aimed at the increase of agricultural produce. Such are, for instance, investigations having for their object the improvement of old, and the introduction of new, staples; the effect and value of canal water; reform in agricultural methods and practices, and the like. Enquiries of this kind are dependent on local conditions of soil, climate, custom, etc., and have often indeed to be carried out at various centres within each province. Government farms, estates under the management of Courts of Wards, estates belonging to Government, farms of landholders willing to co-operate with the provincial departments; these are the experimental fields in which the local experts are mainly required to work.

The general character of the scheme of scientific enquiry under provincial direction will be dealt with in the *fifth* Resolution.

12. The recommendations of Dr. Voelcker, of the two conferences of 1890 and 1893, as well as of those recently held, have confirmed the view that investigation must precede improvement. But, as investigation proceeds in the numerous fields in which it has been or will be inaugurated, palpable and conclusive improvements are, as experience has shown, continually brought to light; remedies for existing evils are discovered and useful modifications of agricultural practices are ascertained. Every effort should now be made to take such measures as will permit the country to derive the fullest advantage from these results. The most important matter is the proper education of the agriculturist. For the Government of India still hold to the opinion expressed in the opening Resolution of 1881, and again in the Resolutions convening the conferences of 1890, 1893, and 1895-96, that no important reforms can be safely or widely introduced into the agricultural system without the general co-operation of the farming classes, whose intelligent and

willing aid cannot be expected 'until their education has been so directed as to enable them to appreciate and, where expedient, to adopt the results obtained by the systematic and continuous enquiries of experts.' This view has been strongly confirmed by the various conferences which have recently discussed the question, and has been supported by all local governments and administrations concerned.

The subject of educational reform, so far as it concerns agricultural interests, will be dealt with in the *sixth* Resolution of the series.

13. In the despatch of 1881, in which the views of the Secretary of State on the duties of the new departments of Agriculture were communicated, attention was drawn to the obligation which the Famine Commissioners had desired to be placed on them 'to render available agricultural and economic facts and statistics for every part of India in order that Government and its officers may always be in possession of an adequate knowledge of the actual condition of the country, its population and resources.' A wide interpretation must be given to this injunction. It must be held to mean that the results of investigation in every branch of enquiry, which is taken under the control of the imperial and provincial departments, must be intelligently collated and published on such plan as will bring the information gathered in an accessible form to the early knowledge of those whom it may concern. Much has been done in this direction, but the development of the scheme of publication still stands in great need of the further attention and co-operation of provincial departments. The measures which have been taken or may be required for giving effect to the injunctions of the 1881 despatch and for establishing a sound system of publishing information bearing on the condition, population and resources of the country will form the subject of the *seventh* Resolution.

14. The agricultural conference of 1893 recommended in the course of their proceedings that the form of the annual reports of Agricultural Departments should be so revised as to bring them into greater conformity with the scheme of their work. The subject was not formally discussed at the recent conferences, in view of the fact that no general scheme could be elaborated until the whole series of conference proceedings had been brought under the review of the provincial and imperial Governments. But the Government of India is now prepared to formulate the general principles on which departmental reports should be framed, and these will be suggested in the *eighth* and final Resolution of the series.

15. The Resolutions which have thus been announced are the outcome of the experience and developments of the fifteen years which have passed since the Famine Commissioners' report was, under the orders of Her Majesty's Secretary of State, first made the foundation of an agricultural programme. They purposely avoid instructions on matters of detail, but aim at a clear and full definition of the large and broad principles on which the scheme of agricultural enquiry and improvement should proceed. They are thus primarily designed for the guidance of officers in charge of agricultural departments upon whom the duty of giving effect to them should be strictly imposed. In view, however, of the importance which the Government of India attaches to the possession by all officials of a general knowledge of the policy which has been gradually developed from the Famine Commissioners' recommendations, the Resolutions should, when opportunity occurs, be studied by all land revenue officials, and the Government of India suggest that they might with advantage be made one of the subjects to be read for the official examinations which junior revenue officers are required to pass.

SECOND RESOLUTION.

Land Record Establishments.

The foundation of all land administration is the field. More specially must agricultural inquiry and reform, which are now recognized as an integral part of land administration, be based upon the facts and figures recorded in connection with each individual field of an Indian village. To quote the words presented to Her Majesty's Secretary of State twenty years ago—

"India is an agricultural country composed of a multiplicity of minute holdings, and almost every subject which we take in hand in connection with the administration of the country must be referred to the units of which it is formed. A measure which makes a very slight alteration in the condition of each unit may have a very important effect on the whole country, since what may be termed the atomic changes are combined by enormous multiples. It may seem a little thing to ensure the correct record of facts connected with a single field, but when we consider that the country is nothing but a congeries of single fields, the subject assumes an importance which is apt to be lost sight of in discussing the manipulation of a village register."

The first requisite in any programme for agricultural inquiry and improvement is therefore the efficiency of the land record establishments.

2. To each village or group of villages in this country there had always been attached a village accountant. His hereditary duties are to provide annually for each field a correct record of area, occupancy, rent, crops and of other facts and statistics called for by his official superiors. In some parts of India a hereditary claim to the office has been scrupulously maintained. In others the hereditary right has been greatly weakened or entirely abandoned. But whatever may be the position of the hereditary claim, the hereditary duties of the office have still to be performed, and since the conduct of land administration and agricultural reform depend largely on the records of the village officer it becomes a primary duty of the authorities to take such measures as may be necessary to secure his efficiency.

3. As soon as the subject came under the special consideration of the Government of India, it was found that in many provinces the hereditary claim to the office had been allowed to override more or less the claim of the State to the efficiency of the holder of it; that the village officer was often incompetent, and not seldom so incompetent as to require an assistant for the performance of his work; that the land records had become incomplete and untrustworthy; that in some districts attempts to maintain anything like a correct record had ceased; that in others the office itself had been allowed to die out.

It had been proved on the other hand by results already obtained in more than one province that the village registers could be made to yield that punctual information of the circumstances of every agricultural tract which the Famine Commissioners had urged to be necessary for timely provision against scarcity; that the accountants could be trained to correct their maps from year to year in accordance with facts upon the ground; that their records, when carefully maintained, tended to facilitate the work of civil and land revenue courts, to cheapen litigation, and to provide every person concerned with an easy means of ascertaining or establishing his rights and interests in land. It had been foreseen too that many direct economies should be effected by improving the village staff; that in some of the temporarily assessed provinces a correct record would mean a material reduction in the cost of periodic settlements that, by a proper use of the village agency, expenditure on field surveys alone might be reduced from something like R200 to R50 a square mile, and that a series of annual statistics extending over a long period would afford a safer and broader basis for land assessment than the facts and figures hastily collected in a single year at great cost by huge temporary establishments.

4. When therefore, in pursuance of the Famine Commissioners' recommendations new departments were, under the orders of Her Majesty's Secretary of State, created in each province for the purpose of dealing with agricultural facts and statistics, as a foundation for agricultural improvement, the Government of India desired that they should be made specially responsible to the local governments

and administrations for the restoration and improvement of the land record, and for the competence and efficiency of the officials by whom it was to be maintained. This indeed was to be their first duty. The Famine Commission held the belief, to which expression had been given by Lord Mayo's Government ten years earlier, that agricultural science applied to Indian soils could materially increase the produce of the land and would thus go far to minimize the sufferings of the people in a season of scarcity; and it was in this view that they demanded the employment of agricultural experts and the creation of agricultural departments. But it was foreseen by the Government of India that attempts at agricultural development would require many years of continuous and patient investigation by experts before they could be expected to yield important or safe results; that in many cases they must be based on facts and figures which could only be derived from a long series of correct maps and records, and that everywhere the introduction of improvements into the agricultural system would require the instructed intelligence and co-operation of a class whose education had hardly yet begun. In the opening resolution, therefore, of 1881, which prescribed the duties of the new departments, it was laid down that attempts at agricultural improvement must be for a time subordinated to agricultural enquiry. This meant that the provision and the maintenance of correct maps and records, upon which enquiry was to be based, must be the first stage in schemes of agricultural reform.

5. Another important consideration justified this course. It was anticipated that after the excitement caused by the 1878 famine had subsided, the time might come, when, under circumstances of financial pressure, costly departments whose efforts should be confined to scientific experiments of an apparently unremunerative character would be subjected to hostile criticism. It seemed desirable therefore to make every effort to turn the first attention of the new departments to remunerative work. It had already been argued that the improvement of the land record and of the machinery by which it was maintained could at least cheapen the expensive operations of surveys and settlements, would minimize the work of law courts, and would facilitate the current business of district administration. Here then was a direction in which the outlay might be recouped at the same time that a sound foundation could be laid for agricultural reform.

The policy was justified by subsequent events. The Finance Committee of 1886, which included among its members the writer of the Famine Report of 1880, and was therefore fully cognizant of the important advantages of agricultural investigation and experiment, came to the definite conclusion that expenditure on agricultural departments could not, under existing circumstances, be justified unless it could be shown that they were or would be directly remunerative. The departments were subjected accordingly to this financial test. In almost every case it was found that independently of the indirect advantages derived from an improved land record, a direct financial saving was or would be effected aggregating a total of from 200 or 300 lakhs of rupees; that the economy was mainly due to the training, utilization, and proper supervision of the village officer; that where excess expenditure had occurred, it was in some degree due to the partial exclusion of the village officer from the scheme, and to the substitution for him of more expensive agency. The question then arose whether in those provinces where outlay exceeded income the departments could be retained.

6. The Government of India, in dealing with the results of the financial enquiry, accepted the fact that the indirect advantages of a land record were so great as to afford, even in the one or two cases in which outlay was found to exceed income, a strong plea for the maintenance of the provincial departments. They recognized that the extent to which the services of the village officer were financially useful must vary with the conditions of each province; that in the permanently-settled districts of Madras and Bengal, for instance, his charts and records would not be required for purposes of assessment to the same extent as elsewhere; that while on the one hand in the eastern provinces a new map was called for every year by the fluctuations of the cultivated area, due to accidents of floods or to the practice of shifting tillage, on the other hand in the great ryotwari tracts of the southern and western presidencies what was justly termed 'a magnificent piece of machinery', dependent for its solidarity on pillars marking the boundary of every field, had been constructed, which would, if maintained, go far to minimize the employment of the village officer on annual or periodical revisions of survey.

Influenced by such considerations as these, as well as by the fact that in almost every province the utilization of village establishments had been found remunerative, the Governor General in Council did not impose any further condition on the maintenance of departments of land records and agriculture than to require, with the concurrence of Her Majesty's Secretary of State, that the maximum use shall be made of the village officer under all circumstances in which his employment can lead to further economy. In this view the claim of the State to his efficiency must be held to be paramount over all other claims.

7. In dealing with the question the following circumstances must be borne in mind. The class to whom, by custom or by right of descent, the office belongs is intelligent and quick to learn; the status of the hereditary appointment, however poorly paid, is, where the right is strictly maintained, so far an object of ambition to the members of the family to which it is attached, as to justify a condition that they should, after a sufficient term of grace, qualify themselves for it; that cheap educational institutions, provided at public expense, are available to all who are likely to be candidates for the office; that, according to the evidence adduced at the recent conferences, supplementary schools can, at no great cost, be established for training them in those special branches of their duties which lie outside the ordinary educational curriculum. It may therefore safely be laid down that after a given date no village officer should be admitted to an appointment, who cannot satisfy the educational test required.

The test imposed must, in the opinion of the Government of India, include a sufficient knowledge of survey and mensuration to enable a village officer to maintain correctly a map of the circle under his charge. Even in districts where surveys will require least revision, the village officer must be competent to enter new fields and sub-divisions of fields upon his map. But whether or not he is likely to be called upon to execute an actual field survey, he should in any case be made to acquire that intelligent comprehension of a map, and of the relation between a map and the records based upon it, which can only be gained by practice in map construction on the field.

The Government of India would have some hesitation in enforcing this obligation if it entailed any real difficulty. But the evidence adduced at the recent conferences and the quick results obtained even in provinces and native states where the education of village officers had for many years been neglected have proved that any school lad of the class from which village accountants are drawn can, as a rule, be taught in a few weeks all that is necessary for the field survey, under proper supervision, of any part of a village.

8. The proceedings of the conferences indicate that the efficiency of village officers has reached its highest level in the Punjab, and explain why this should be the case. In that province the organization of village establishments had been taken in hand before the creation of the new departments of land records; the hereditary claim, though not disregarded, was made strictly subservient to efficiency; close supervision was exercised over the village officials; the salary of the office was gradually raised; and considerable encouragement was given to those who held it by ensuring the promotion of the best men to supervisorships and other higher appointments. The rules lay down that at least two-thirds of the supervisors should be taken from the ranks of the village officers.

The Government of India are not prepared to advocate that the Punjab rules should be taken as a precise model for other provinces, but they commend the principles underlying them as sound. They think that the time should come when in every province a fair educational test including competence to survey, should be strictly imposed; adequate pay for the office should be provided; and excellence of work encouraged by reasonable promotion to higher appointments. They consider, however, that on the one hand care should be taken, in those parts of India in which the educational standard of the agricultural population has not reached a high level, that the status of the village officer is not so unduly raised as to give him too masterful a position in the village or group of villages under his charge, and that on the other, the admission of village officers into the ranks of their supervisors should not be made so free as to endanger the high standard of excellence which the controlling staff is, for reasons hereinafter given, expected to attain.

9. The history of the supervisor is very similar to that of the village officer. As in each village there was, under native rule, an accountant, so to each of the

administrative circles, containing perhaps one or two hundred villages, into which a district was divided, there was attached an official whose main duty it was to collate the returns received from village accountants, and to obtain such information of the agricultural and financial condition of the circle as might be required for purposes of assessment and of land revenue administration. On investigation the original functions of the office were found to have been often forgotten; sometimes the office had disappeared; almost everywhere the hereditary claim to it had overridden all other considerations; not infrequently the incumbent was so illiterate or incapable as to be unable to perform without assistance any official duties at all; and as a general rule the duties assigned to him were quite outside the traditional functions of his office.

10. When the reform of the land record system was taken in hand, the first step in almost every province was to restore the hereditary duties and functions of the circle officer. In some parts of India, where the hereditary responsibilities had been forgotten, the hereditary right to the office had been nevertheless even more strongly maintained than that of the village officer, and much care had to be taken to prevent it from being unduly interfered with by the initiation of too trenchant reforms. In such cases older men were allowed to appoint substitutes or educated relatives; time was given to the younger to learn how to perform efficiently the real duties of their office; only those of the latter who were hopelessly incapable were ejected. At the same time it was found that a material expansion of the staff had become necessary. The extension of cultivated area, the growth of population, the demand for more elaborate statistics, all these and similar causes had doubled the work which had to be done. The number of circle officers that had sufficed for the needs of the earlier years of the century was wholly inadequate now. In almost every province therefore the staff was largely increased by the incorporation in it of the best of the men who had been for some years engaged in supervising the subordinate establishments of survey and settlement parties in the field. These recruits brought into the ranks of the effete service the very experience which was wanting. They were active men, accustomed to direct and control, and experts in the construction of field maps and field records. Their example proved of great value to the hereditary staff.

The duties partly peripatetic and partly sedentary, of the office, had, so far as they had been performed, been hitherto amalgamated. They were now divided. The circles were increased in number, and the areas correspondingly contracted. To each circle was attached a "peripatetic" officer for inspecting and controlling the work of 40 or 50 village officers. At the head-quarters of each of the administrative sub-divisions of a district, perhaps from 5 to 10 in number, and each comprising 2 or 3 peripatetic circles, was located the "sedentary" official. The younger and more active of the staff were placed in charge of the smaller peripatetic circles. The older men were assigned to the sedentary office. The main duties of the peripatetic circle officers were to instruct the village officers; to examine their work; to note and report defects; to relieve as far as possible the higher officials from the necessity of personally inspecting the village officers maps and records; to provide for his circle quick and early information of any kind that might be urgently called for in connection with the land or the people upon it, as well as periodical reports on the agricultural condition of the area under his charge; and finally, to fulfil the various executive duties which a season of scarcity of famine might entail. The main duties of the "sedentary" officials were to examine the various returns sent in from the villages and to compile them in abstract forms for his group of circles. At the head-quarters of the district a head supervisor was established who was to make a similar compilation for the whole district and to superintend generally the work of the whole staff. The functions of the higher officials and covenanted officers were, as pointed out in an imperial resolution of 1883, no longer to include the detailed inspection of the village officers' maps and records, but were to be confined to such an examination of the supervisor's work as would prove whether or not their duties of inspection and control was being properly performed, and to the adoption of such measures, punitive or otherwise, as might tend to improve their efficiency.

Such was the general character of the scheme of inspection and supervision which, with due regard to the varying conditions of each province, has been

established in every part of India, except in those permanently-settled districts of Madras and Bengal in which the village officer has either disappeared or has not been brought under official control. The proceedings of the recent conferences have now afforded to the Government of India the opportunity of ascertaining in what directions the improvement of the supervising machinery may in some provinces still be possible.

11. One important matter is the confinement of the supervising officers to their proper functions. They should not, on the one hand, be allowed to perform the duties of the village officers, or on the other those which properly belong to other officials on the district staff. In some cases an excessive regard for the hereditary claims of the village officers, or a distrust of their capacity to learn, has led to the transfer of a portion of the village duties to the supervising staff. The extravagant tendency of this procedure was pointed out by the Finance Commission. In other cases the important duty of inspection has been interfered with by the practice of using the supervisors for enquiries and reports on matters unconnected with the village records. This may, as in the Punjab, be checked by forbidding any order for reports and enquiries, other than for those prescribed by the rules, to be issued by sub-divisional or district officers. On either hand a transgression of the limits within which the duties of the office should be confined must be carefully prevented

12. The next point to which attention may be drawn is the proper instruction of the supervising staff in survey. In the imperial resolution of 1882* in which the general principles on which the cadastral surveys of the country should be conducted and maintained were discussed, the advantage and economy of utilizing the corrections made by the land-record staff in field maps for the periodical revision of topographical charts was pointed out. But unless confidence in the accuracy of village field maps can be assured by professional supervision and unless the maps themselves are professionally connected with the survey stations laid down throughout India by the trigonometrical and topographical departments, there may always be a danger that the details supplied by the provincial establishments will not be accepted by the professional officers responsible for topographical cartography, and that the details already mapped by the land-record staff may have to be mapped over again at great and unnecessary cost by the professional staff. Hitherto the survey operations which have been conducted in almost every province have not only supplied a large percentage of recruits, professionally trained in survey, for the circle staff, but have afforded a field for the instruction of the previously existing circle officers. This will not be the case in future. Henceforward a practical knowledge of, and experience in, approved professional methods will, if precautions be not taken, gradually die out; and, as has already occurred in some cases, the field maps will become more and more inaccurate and unequal in quality. It is of importance that this result should not be allowed to occur, especially as, independently of the requirements of cartography, the maintenance of field maps up to a reasonably fair standard is for all purposes of administration desirable. It is considered in some provinces that the best security against a gradual decline in the value of field maps whenever these have been initially laid down on professional lines, is the periodical transfer of a limited number of survey officers of responsible position from the professional staff, whose duty it should be to preserve a knowledge of correct methods throughout all grades in the land-record staff and to personally supervise or inspect all surveys which are of a materially more important character than the mere revision of a village map. This policy has been accepted in Madras, in Bombay, and to some extent in the Central and North-West Provinces, while very full effect has been given to it in Burma where the exceptionally shifting character of the cultivation has justified the employment in every district of a superior officer who is either transferred from the Survey Department or is thoroughly trained in survey. The Governor General in Council now desires that the question may receive full and careful consideration in every province, in which no measures have yet been taken, for providing for the maintenance of maps on a correct professional basis and how far the central guidance of competent experts is likely to be useful.

*No. 45 S., dated 4th September 1882

13. A third matter is the improvement of the supervising staff by securing for the best men in it a reasonable prospect of promotion to higher service. The advantages of this course were pointed out in an imperial resolution

No. 339, dated 14th March 1883.

of 1883. It was then urged that promotion should not merely be permissible but obligatory; that it was not unnatural that vacancies in the regular line should usually be offered to those officials, or to their friends, who come most into personal contact with the officers in whose hands patronage rests, and that since the duties of circle officers usually confine them to outlying parts of the district, their claim to promotion in the regular line is apt to be overlooked unless a certain number of such appointments are strictly reserved for duly qualified members of the supervising staff.

14. Very inadequate effect seems to have been given to this policy except in the Punjab where its success has been marked. No less than one-third of the circle officers have been in the last few years admitted to the higher revenue appointments, and now no difficulty is found in attracting young men of good family and high educational attainment as candidates for the supervisorships. By degrees the educational test has been raised and the time will doubtless come when the appointments will be readily sought for by men who have obtained a graduate's degree at a University or a diploma at an Agricultural College.

A further advantage of the policy was indicated in the 1883 Resolution. It was contended that as the supervising officials acquire from the nature of their duties a considerable knowledge of agriculture and of the condition and circumstances of the agricultural classes, a free flow of promotion from their ranks would infuse into the upper grades of the revenue service a useful acquaintance with the agricultural conditions of the district or province in which they hold office. The Government of India is pleased to observe from the proceedings now before them that this view has received strong support from both the conferences and the local Governments, and that the advantage of leavening the revenue service with officials who have learned their work in the field is fully recognized. In the Punjab the value of the experience gained by a circle officer is so thoroughly appreciated that every candidate for a revenue appointment, whether a circle officer or not, is made to serve an apprenticeship, which may extend to two years, as a supervisor, and the plan is commended to the notice of all local governments and administrations.

15. A difficulty is, in some provinces, presented by the circumstance that the educational standard prescribed for entry into the upper grades of the revenue service is far higher than that which is, or can for some time be, imposed for a circle supervisorship. The difficulty is greatest in those provinces in which education has been most highly developed, in which universities are of the longest standing, and in which at the same time the inspecting staff has been allowed to fall into the worst condition of neglect and delay. While the revenue appointments have gradually become an object of ambition to university graduates, the hereditary offices have been filled by men from whom no educational test of any value has been required. The one service has slowly advanced, the other slowly declined in quality, a gulf has been created between the two which it is not easy to bridge.

In other provinces again, of which the Punjab may be taken as an example, the measures taken to improve the supervisor class were antecedent to the introduction of that high education which is represented by a university. A long period of survey and settlement operations, conducted as a rule without the assistance of the professional survey department, had created a large supervising staff in which existing circle officers were temporarily included and from which, it was easy to select for transfer to the permanent circle staff, intelligent and capable recruits with the very experience that was wanted for the management and control of village officers. On the other hand the educational standard for higher revenue posts was, as is still the case, low in comparison with that in provinces with universities of long standing. The new men, with their practical experience, were found to be often better and more intelligent officers than many of those occupying higher positions in the regular establishments. There has been no wide gulf to bridge, and the dovetailing of the two branches of the service has been therefore a simpler matter.

16. The Government of India, while recognising the fact that the attainment of a policy of perfection must be a work of slow growth, conceive it to be necessary that a 'working plan' should be laid down for the gradual development of a sound system and that, the wide breach, where it exists, between the peripatetic service and the administrative service must be gradually narrowed and eventually closed. In provinces which have in recent years undergone survey operations, no

wiser course can probably be followed than either to select for the peripatetic appointments the best of the survey supervisors who have gained a practical knowledge of field duties, or to train existing circle officers up to the same standard. But a date should be named after which mere field experience and an acquaintance with the village land records should not, without much higher qualifications than these, admit a candidate to a circle appointment.

17. Taking a broad view of the subject, the Government of India have, upon a review of the conference proceedings and the letters with which they are forwarded, arrived at the following conclusions. They deem that a serious obligation rests upon the State to utilize to the utmost extent for the benefit of the public service the educational system established in the country; that the time must come, as indeed in some parts of India it has come, when all officials required for the conduct of business connected with the land, excepting only those whose duties are of entirely a subordinate character, must attain the educational standard represented by a graduate's degree or some equivalent diploma; that it is of equal importance that every official who has to do with land administration should have learned by practical experience the conditions prevailing upon the land with which he will have to deal; that he should be familiar with its agricultural system, with the character and customs of the people upon it, with the methods and principles on which the record of changing facts and circumstances is maintained; that in this view the experience of the large peripatetic staff employed throughout the empire, to the number of several thousands, on duties which ensure the requisite experience, should, not be thrown away, that no opportunity should be lost of drawing from its ranks selected men of proved excellence for service in the higher appointments; and that in order to give effect to this policy, the educational standard of the peripatetic staff must be gradually so raised as to guarantee the intellectual fitness of the men who are to be drafted from it. With the advance of education, increasing competition for pensioned employment, and a widening opportunity of promotion to the upper grades of official service, there will, in the opinion of the Government of India, be no need to fear that the field service will fail to attract candidates of high educational attainments.

Such a result would be desirable in the interests alone of the maintenance of a correct land record and of the proper training and control of the village subordinates by whom it is maintained, but it has an even higher importance in securing the efficiency of the higher official service upon which the conduct of the land administration of the empire mainly devolves.

THIRD RESOLUTION.

Utilization of Land Records.

1. In 1874 Her Majesty's Secretary of State pressed upon the Government of India the desirability of utilizing the facts and statistics obtainable from village records with the object of collecting agricultural information, and, in a despatch of the following year on this subject, explained that the object aimed at by Lord Mayo's Government in proposing the establishment of agricultural departments had been the establishment of a specific branch of the administration whose prime duty it should be to suggest measures for the development of agricultural industry; that one part of this duty was to consist in the collection of statistics which might throw light on questions of agriculture and on the possibilities of improving the resources of the country; that the basis of the scheme should be the utilization of the records maintained by village accountants.

Four years later the Famine Commissioners, adverting to these injunctions, confirmed the Secretary of State's view, and recorded their opinion that 'the 'revenue system in the greater part of British India is such as to present 'unrivalled means of ascertaining in the fullest manner all necessary facts relat-'ing to agriculture, but that those means have nowhere been completely utilized 'or made as efficient as they might be.' They then recommended that a director of agriculture chosen for his knowledge of the people and particularly of the agricultural classes should be appointed in each province who would control the land record system; would advise the local government on all matters relating to agriculture and statistics, and superintend all measures designed to improve the agriculture of the country. The creation of imperial and provincial departments of land records and agriculture in and after 1881 was designed to fulfil the objects thus explained. The establishment of a scheme for the effective utilization in the interests of agriculture of information obtainable through the land records is therefore a primary duty of the directors of agricultural departments. The question was one of the most important discussed at the recent conferences.

2. The opening resolution of 1881, in which the duties of the new departments were first described, explained that an examination of the Famine Commissioners' recommendations in connection with agricultural enquiry showed that their final object was to urge, 'as a practical outcome of an intelligent scheme of investigation, the policy of maintaining agricultural operations at the highest attainable standard of agricultural efficiency; that this policy included the prevention of deterioration as well as the attainment of positive improvement; that it was necessary therefore first to localize every agricultural defect, then to discover its cause, and finally to devise such protective arrangements as may remove or alleviate its injurious action. As an important illustration of the character of the investigation which was to be made, the examination of each agricultural tract in respect to its liability to suffer from drought on the one hand, or the extent to which it was or could be protected from drought on the other, was suggested. The whole scheme of investigation was afterwards briefly designated as 'district analysis.'

3. The form in which the programme of investigation was put forward in the 1881 resolution and the special attention which was drawn to the desirability of mapping out the tracts of a province in relation to their liability to failure from drought led in some provinces to a misconception of the scheme. It was assumed that a general enquiry into the agricultural condition of each district made once for all, and a special investigation of the liability of each part of it to failure from drought would meet the design of the resolution. It was not clearly apprehended that the scheme was to be slowly and gradually worked out; that one by one every agricultural defect should be in the course of time closely analyzed and carefully studied with a view to the possible discovery of remedial action; and that for the purpose of ascertaining the existence and extent of each defect, the utmost use should be made of the information which the land records could be made to yield. Thus while in many parts of India

excellent reports, maps, and atlases were published in illustration of the general condition of each district, no precise enquiry was set on foot as to the agricultural circumstances of each village or group of villages; as to the particular defect or defects which prevented each locality from reaching 'the highest standard of agricultural efficiency'; or as to the possibility of remedial action in each case.

4. The enquiries, however, that were actually made in some provinces threw much light on the position. They proved that, notwithstanding the hereditary experience of the Indian cultivator and the special knowledge which he possessed of methods and appliances suited to the locality in which his crops are raised, many defects do exist in the agricultural condition or system of almost every district which, if they cannot be altogether removed, can at least be considerably modified and lessened. At the agricultural conference of 1890 which met Dr. Voelcker before his report was written, the necessity 'of laborious investigation before we can trace out the causes which have stimulated development in 'some parts of India and retarded it in others' was pointed out, and the advantage of utilizing village records as a basis for detailed enquiry was urged. Dr. Voelcker's report went far to prove the existence of innumerable defects in agricultural conditions and practices, and the importance in many cases of an intelligent analysis of facts and statistics, and of well-organized enquiry from village officers. The conference which reviewed Dr. Voelcker's report in 1893 took the same view.

5. So matters stood when the subject was brought before the recent conferences for consideration and discussion. It was represented to them that agricultural failure, *i.e.*, 'failure to reach the highest attainable standard' might be '(1) of occasional, (2) of gradual, or (3) of persistent character'; that it was to be the object of the whole scheme of enquiry to minimize agricultural distress and agricultural loss in each class of cases; and that the first step was to decide how far the land records machinery could be utilized in the investigations under each head.

(1) *Occasional failure* was explained as "sudden distress due to unforseen calamity, such as failure of rain, hail storms, inundations, etc., requiring, as a rule, immediate relief." In these cases the land records are of primary service to district officials as indicating the extent and character of the calamity. The functions of the director of the land records department are confined to organising or to suggesting how to improve the system under which prompt and continuous information supplied by the records should be brought before the responsible authorities and to ascertaining that proper effect is given to the system. It is left to the district officers to take suitable action. The examination which was made at the recent conferences of the measures which have been taken in the last few years to utilize the land records for this purpose proved that the system now established in every part of India in which land records are maintained is excellent, and that the results have already been most satisfactory.

(2) *Gradual failure* was explained as 'gradual deterioration due to ascertainable causes requiring early and special measures of prevention and relief.' Considerable distress had been known to have occurred in many parts of India in consequence of neglect to relieve the population of agricultural tracts which had suffered from cattle murrains, from swamping due to the interference of drainage by railway embankments or canals, from the growth of a noxious weed, and from other causes which gradually reduce the value of land or affect the prosperity of the people. 'In almost every province,' it was written, 'the detailed records now 'maintained under careful inspection by village officers provide, although in scattered forms and in troublesome detail, all the information necessary for indicating 'the serious deterioration of any agricultural tract; and it only remains to make 'provision for such a clear and simple abstract of the information and statistics 'embodied in the village registers as will enable district officers to grasp the 'pertinent facts without real difficulty or unnecessary waste of time.'

One of the most important results of the recent conferences has been the practical adoption of this plan. In every part of India, in which land records are maintained, a book is now to be kept up by each 'circle' officer, in which will be entered in English figures under appropriate heads such statistics as are calculated to show at a glance the advance or decline in

prosperity of every village; such for instance as the cultivated and irrigated area of the year, the arrears outstanding, the sales or mortgages of land, and so on. Half an hour's examination of a circle book thus kept will indicate at once whether a village or group of villages is declining in agricultural condition; and this fact known, the cause of failure can be ascertained and remedial action suggested. It is important in the opinion of the Government of India that the recommendation, recorded in the proceedings of almost every conference, should be adopted, to the effect that the books should be periodically inspected by some responsible district official, so that within every few years the condition of every village should come under intelligent review, and that notes should be entered by the inspecting officer, explaining the cause of any marked or serious deterioration, and of any suggestions made or action taken to meet the case. Independently of the advantages of the system for purposes of current administration the series of circle books thus maintained will form an historical record of great value to officers who may be hereafter called upon to revise the assessments of land revenue. Directors of departments of land records and agriculture should be instructed to consider it one of their chief duties to ascertain that the circle books are punctually and intelligently examined in every district. On the other hand district officers should be required to communicate to the Director, for entry in his office ledgers, the proved existence of any serious agricultural deterioration that may have occurred in a locality.

(3) *Persistent failure* was defined as failure to reach the highest attainable standard, due to causes or defects of a more or less persistent character, and requiring prolonged investigation. Such causes or defects are, it was explained, want of irrigation, frequent liability to failure of rain, insufficiency in the wood or fuel supply, cattle diseases, plant diseases and blights, want of drainage, the prevalence of saline efflorescence, proved imperfections in agricultural practices, the want of suitable manures, and so on.

6. It is to this class of cases that Dr. Voelcker's report chiefly refers. Many of the defects such as those enumerated demand scientific enquiry by experts including experimental investigations on the departmental farms or on the estates of the courts of wards or of landlords willing to assist in the work. This branch of enquiry will be dealt with in the succeeding resolution. But the land records and the land record establishments can often be utilized for providing a basis for more detailed enquiry. Thus the distribution of irrigation, the character of the rainfall in each tract, the extent of the wood supply can be ascertained from the records themselves. Information as to the occurrence of particular cattle and plant diseases, the areas affected by the outcrop of salts, facts as to agricultural practices, and other agricultural matters can be attained by well organized enquiry from the circle and village officers, to whom a series of questions bearing on the subject under investigation may be circulated.

7. These suggestions are sufficient to indicate the importance of the information which the land records and the land record establishments can under intelligent direction be made to yield. The plan of enquiry must, however, in each case be worked out by the director of the agricultural department with the assitance of the experts placed at his disposal; and whatever system be adopted, the work is one which in its broader aspects must extend over periods of many years. The necessity for detailed enquiries will probably never cease. Whether in the working plan which is to be laid down enquiry at any one time should be limited to one or two subjects was a question which was discussed at the recent conferences, but will be dealt with in the succeeding resolution. What the Government of India desire now to insist upon is that, whatever may be the agricultural defect which is brought under investigation, the officers of the agricultural department should, as a first step, consider how far the land records and the establishments maintaining them can be utilized for providing information necessary to the enquiry.

8. Although the relation of land record establishments to famine administration was not included among the questions placed before either the conference of 1893 or those recently held, it must not be forgotten that one of the objects with which the Famine Commissioners recommended the organization of those establishments as well as of the formation of provincial departments of agriculture and land records was in order that the administrative and executive

officials responsible for dealing with famine might at all times have at their command both the fullest information regarding the condition of every agricultural tract and the people upon it, and in seasons of scarcity be provided with a well organized agency through which, in the first place, continuous intelligence of the state of every village and every suffering person in it would be communicated to them, and, in the second place, direct relief could be in case of need administered under their direction. These first objects of the land record machinery were fully considered in the famine codes drawn up in 1882, immediately after the constitution of the new departments had been directed. Fortunately since those codes were first issued no serious famine or widespread scarcity has until now afflicted the country and time has been thus given to bring the establishments into good working order. Their utility has indeed been partly proved on the occurrence of sporadic distress in limited areas during the past 15 years. But full evidence of the immense advantages foreseen by the Famine Commissioners, resulting from the existence of a well organized "intelligence department," has only been brought now before the Government of India.

9. The key note of the system is the division of the whole country into easily managed circles of 50 to 100 villages each. It has been estimated that in the temporary settled provinces there is at the present time at the disposal of the district officers an army of some 200,000 village officials who form a well trained and disciplined rank and file, commanded by a staff of 5,000 or 6,000 circle inspectors, who may be well compared to the commissioned officers of regiments. The duties laid down for the latter in the famine codes and by provincial rules are that in ordinary years they should, as already explained, provide the fullest information and statistics regarding the crops and agricultural conditions of every village,—a duty which in every province has in recent years been, so far as circumstances have admitted, well performed; and that in times of famine they should at frequent intervals visit every village and, if necessary, every house for the purpose of ascertaining whether any person or persons are suffering from want of food or from sickness; whether relief is distributed in accordance with directions received; and whether private charity is encouraged and organized; that they should promote the employment of labour on agricultural operations; invite applications to construct wells and other agricultural improvements; make known the places at which relief works are opened, the nature of each work, and the classes of persons to whom such work is open; conduct the distribution of gratuitous relief to persons unable to leave their homes; report on the price of food, the state of the people and cattle, the condition of the water-supply; and generally bring to the immediate notice of the district officials any occurrence deserving attention. In the performance of these duties each circle inspector has, to aid him, some 20 to 40 village officers.

10. Under the stress of the present calamity by which so many provinces of the empire are afflicted, the services of the land record establishments have proved of the greatest value, and have materially reduced the difficulties which on former occasions of famine resulted from the absence of organized machinery.

FOURTH RESOLUTION.

Scientific and national enquiry under imperial direction.

It has been briefly explained in the prefatory resolution of this series that the responsibility for maintaining and developing a 'national scheme of agricultural enquiry,' devolves primarily upon the imperial department of revenue and agriculture. The term 'agricultural enquiry' must here be understood in its widest sense. It must be interpreted to include investigations in all branches of science which bear directly or indirectly on agricultural interests and on the development of the products of the soil and the word 'national' must be held to apply to all enquiry which cannot, for sufficient reasons, be conveniently confined within geographical or administrative boundaries. The national scheme of agricultural enquiry thus explained embraces, so far as it has up to the present time been developed, the following sciences or fields of investigation :—

(1) Geography . .	. Represented by the Survey Department.
(2) Geology . .	. By the Geological Department.
(3) Meteorology .	. (Including solar, magnetic and astronomical observations) by the Meteorological Department.
(4) Botany . .	. By the 'Botanical Survey of India.'
(5) Economic Products	. By the Department under the Reporter on Economic Products.
(6) Veterinary Science	. By the Civil Veterinary Department.
(7) Bacteriology .	. By the Bacteriological Branch of the Veterinary Department.
(8) Agricultural Science	. By the Department of Agricultural Chemistry.
(9) Entomology .	. By the National Museum at Calcutta.
(10) Statistics . .	. By the Statistical Department.
(11) Forestry . .	. By the Inspector General of Forests.

2. The chief considerations which justify the maintenance of imperial direction over investigations conducted in the fields of enquiry summarized in the preceding paragraph will be briefly noted.

The *first* consideration is that scientific investigations must, with few exceptions, be national and not provincial,—in other words, that scientific research cannot, as a rule, be confined within administrative boundaries. In 1890 it became necessary to point out to the Secretary of State how the system of provincializing investigation in the field of botany 'had led to the curious restriction of research to special localities or provinces, while others, forming in the aggregate the larger section of the empire, had been left without investigation of any kind.' But inequality of results is not the only defect which results from confining scientific enquiries to separate provincial action. The unnecessary duplication of labour is another and perhaps more serious defect. For example, the economic products of two adjacent provinces are to a material degree the same, the exceptions forming but a small percentage of the whole. A cattle murrain again may be due to identical causes throughout India. It would be a waste of labour that simultaneous enquiries should be made by scientific experts as to the botanical character of the same plant in two contiguous areas, or that the bacteriological origin of an epidemic should be sought for at great cost to the State at every provincial centre. Such work can be done once for all at one place for at least a group of provinces.

The *second* consideration is the importance of securing first class experts for purposes of scientific research. The value of results depends mainly on the competence and qualifications of the investigator, especially in a country in which conditions vary much from those prevailing in Europe. In view of this circum-

stance and of the financial impossibility of providing every province with a staff of first class and highly paid experts in each branch of scientific research, it becomes necessary to place scientific investigation, as a rule, under central direction.

The *third* consideration is that scientific investigation must be conducted on the basis of a well-considered working-plan. The development of the scheme cannot be entirely left to the occasional and partial initiation of individual governments. In the despatch of 1890, already quoted, it was shown that the distribution of scientific research has hitherto been unequal, both in relation to the sciences represented and to the areas covered by it, partly because no authority had been made responsible for initiating research in new fields, and partly because action taken in one province had not been taken in others. Systematic botany for instance in some provinces, and systematic geology throughout India, have been strongly represented for a long series of years, whereas the study of the useful and economic products of the country and the practical investigation of minerals had until very recently been neglected, while in some of those fields in which modern science has in recent years been working in Europe, such as for instance that of bacteriology, research has hardly commenced.

3. In accepting the responsibility for the general direction and control of the scheme of national research, the Government of India have no desire to exclude the co-operation of local governments and administrations. They would, on the contrary, wish to obtain their advice and assistance at every important step that may be taken towards the development of the scheme, and to receive for favourable consideration any suggestions for initiating or extending scientific research, of which the importance may be shown. Nor will they refuse, whenever circumstances may admit, to transfer any expert attached to an imperial department to the temporary or partial control and direction of the provincial authorities. Effect has indeed in recent years been given to this policy by placing officers of the geological and botanical departments for a definite period under the orders of a local Government, and again by arranging that the services of certain officers of the meteorological department should be shared by the imperial and provincial authorities. Thus the national character of the scheme of research does not altogether preclude provincial independence and co-operation.

4. In 1881, when the orders of Her Majesty's Secretary of State were received for the creation of agricultural departments upon which the responsibility of organizing a scheme of enquiry was to be placed, the position was found to be this:—Geographical exploration was in the hands of a large imperial department of survey; geology was represented by a well equipped staff of imperial experts; research in systematic botany was confined to Bengal and the North-Western Provinces. A meteorological department comprised one imperial officer and four officers partly imperial and partly provincial. Astronomical, magnetic and solar observations were shared by Madras, Bombay and the Government of India. Forestry was represented by provincial and imperial departments. No other science found a place in the scheme. Since 1881 material expansion, sometimes of the investigating staff, sometimes of the programme committed to them, has been effected. A brief account will now be given of the measures which have been taken for the development of enquiry in each field of investigation since that year.

5. *Geography* was in 1881 represented by a well equipped and important survey department, of which the cost to the State considerably exceeded 20 lakhs a year. The programme which it had undertaken was a large one and may be briefly described as the trigonometrical, the topographical, and the cadastral surveys of India. In 1881 the first of these great surveys had almost approached completion. Considerable progress had been made in the second, while the third was shared with local governments, each of the presidencies for instance having separate cadastral departments of a professional character. At the same time the recently introduced policy of financial decentralization augmented the tendency in many provinces to effect cheap cadastral surveys with non-professional establishments, thus entailing a danger that the provincial maps could no longer be accepted for embodiment in the geographical charts of the professional department.

Previously to 1881 financial considerations had required that imperial expenditure on geographical survey should be reduced. An immediate limit of 20 lakhs had been laid down. But the sudden reduction of a long established service was found impossible, and shortly after 1881 the alternative was adopted of diverting a large portion of the staff from unremunerative to remunerative work. The latter was found in the detailed surveys of forests and of agricultural lands. For this purpose local governments were invited to permit the professional parties to lay down for each district a skeleton map which should be scientifically connected with the stations of the trigonometrical charts, as a basis for the field or cadastral maps plotted in by the cheaper agency, and were asked at the same time to utilize the survey officials for instructing the local surveyors. This policy was carried out to its fullest extent in the Central Provinces, where almost the entire survey was conducted on these principles. Partial effect was given to it in the North-Western Provinces, Burma and Assam. Nothing could be done in provinces in which as in the Punjab cadastral maps were approaching completion by a well trained local agency, but on the other hand in provinces where the local agency had not been trained, much of the field plotting itself had to be done by the professional surveyors

The advantage to geographical science of the system advocated is that wherever the field maps have been thus professionally connected with the trigonometrical stations, new topographical details, entered from time to time as changes in the features of the land surface may require in the field maps, can be at once transferred to the geographical charts.

Simultaneously with the development of the large geographical scheme, as represented by the three important branches of survey, other scientific work, such as tidal observations, latitude investigations, and cartographical development, has been carried on by experts of the department.

In the meantime the staff of the imperial department has been gradually reduced, and will, as the demands on it diminish, be brought under further contraction. At present the recent annexation of Upper Burma, the development of the North-Western frontier, the opening of a cadastral survey in Bengal, the new requirements of forest departments, and the uncompleted portion of the topographical scheme in the older provinces, form an extensive programme, for the execution of which large establishments are still required.

6. *Geology* has for many years past been represented by a strong corps of experts which till 1881 was mainly devoted to the scientific examination of rocks and strata. After 1881 the policy was introduced of directing the attention and labours of the geological officers also to practical investigations. In 1893, the department was reorganized. Scientific exploration was, as a basis for the study in detail of the mineral resources of the country, still to hold the first place, but a small section of the officers employed, including, whenever required, experts imported for temporary employment, was set apart for the special examination of mineral fields. Changes were made in the rules under which recruits admitted into the department were required to undergo practical training in mines or in laboratories. At the same time the principle of decentralization was so far adopted as to admit of the services of a geological officer being temporarily transferred for sufficient reasons to any provincial government. Recently an inspector of mines has been attached to the department.

7 *Meteorology* was, in 1881, represented partly by an imperial and partly by provincial departments. The Famine Commissioners laid much stress on the promotion of meteorological enquiry. It was, they wrote, of primary importance that meteorological observation should not only be maintained in complete efficiency, but also so strengthened and improved as to ensure the early and punctual supply of information to officials and to the public of weather conditions and prospects. Protection against famine, the safety of shipping, warning against floods, were objects to be held in view. Since 1881 the department has been materially strengthened. A second European expert has been attached to the central office. A complete system of warning signals has been established along the coasts. The number of observing stations has been considerably increased inland. Information is brought by telegraph from 116 instead of as formerly from 50 of the principal stations; detailed statistics illustrated by charts are daily despatched by post, and an abstract of them by telegram, to every part of India. The character and causes of meteorological phenomena

which occur on the continent or on the adjacent seas are being carefully worked out. The provincial officers, who have other local duties not connected with meteorology to perform, conduct their meteorological work in co-operation with and under the general guidance of the central department and furnish the local governments with such supplementary details as they may require.

8. *Botany* like geology is a science which has been officially represented from the earlier years of the century. But as was long the case in Europe investigation was confined to the field of systematic botany, *i.e.*, to the collecting, arranging and naming of species and varieties of plants. Physiological botany and the economic and agricultural uses of plants were not made the subject of organized enquiry. As systematic botany was at one time a favourite occupation of most men with scientific training and tastes, much had been done independently of official agency by medical officers and others in many parts of India. But no organized scheme had ever been worked out for the whole country. In 1881 two officers, one at Calcutta and one at Saharanpur, were officially engaged on completing the botanical survey of Indian plants, but their labours were practically restricted to the two provinces of Bengal and the North-Western Provinces in which they were located. In 1885 a third officer was, at the request of the Government of Madras, attached to that Presidency. Thus, of all India, only three provinces were included in the area of botanical enquiry.

In 1890 the Government of India, in communication with the Kew authorities, expanded the scheme of botanical investigation. The Calcutta officer was placed at the head of a 'botanical survey of India;' the entire empire was, for the purposes of the survey, divided between the three experts, with the occasional assistance of a fourth in Bombay; botanical investigation was to take as far as possible a practical direction; and the officers of the provincial departments of agriculture were to co-operate with the botanical officers in arranging working-plans of enquiry.

Whether in view of the needs to be met in other branches of scientific investigation the staff employed on the botanical survey of India can always be maintained at its present strength, is a question which is still under consideration.

9. The *economic products* of India had not previously to 1881 been brought under systematic investigation. Much scattered information had been embodied in official and private publications, in scientific journals and the like, but was of little practical use, because it had not been collated and published in any accessible form. Advantage was therefore taken of the various requisitions made for collections of the products of India, on behalf of a series of international exhibitions ending with the Indo-Colonial Exhibition of 1886, to allot to an expert official the duty of making a full collection for all India, illustrated by a *catalogue raisonnée* which has recently been completed and published as a 'dictionary of the economic products of India.' The work has occupied 10 years. In 1887 the appointment, hitherto a temporary one, was made permanent. The collections were placed in the national museum at Calcutta, and the officer holding the appointment, whose duties had been, pending the completion of the dictionary, confined to the collation of matter already recorded, is now engaged in making supplementary investigations regarding those economic products in respect to which information is wanting or incomplete.

10. *Veterinary science.*—This includes the investigation of animal diseases, and of the means by which they may be prevented or cured. The enquiry is one of great importance to agricultural industry. The annual loss due to animal disease has been estimated in crores of rupees. It has indeed been officially stated by the local Government of one of the northern provinces that in the course of any five years the destruction caused by rinderpest alone was greater than that caused by drought.

Up to the year 1881 the only step taken towards serious investigation was the appointment in 1868 by Lord Mayo's government of an important Commission whose report fully confirmed the necessity of further enquiry and of well organized measures. No further action, however, was taken until 1890, when proposals were sanctioned by Her Majesty's Secretary of State involving the attachment of a veterinary officer transferred from the military staff to every province and of two officers with central duties to the imperial department of

revenue and agriculture. A scheme was then drawn up for a so-called veterinary survey of cattle and of cattle diseases. The survey is primarily directed by one of the imperial officers who is engaged with the co-operation of the provincial officers in collecting and collating information throughout India regarding the various breeds of cattle and other animals useful to agriculture in the country and of the diseases to which they are subject.

11. *Bacteriology.*—Simultaneously with the veterinary survey, investigation is being made as to the possibilities of preventing or curing cattle disease. The treatment of many diseases is known, and veterinary schools under the direction of the provincial officers have now been established at almost every provincial centre for the instruction of native practitioners. A lead in this direction had indeed already been given in Bombay, the Punjab and Madras. But no successful method of dealing with the most fatal and destructive epidemics, such as anthrax, rinderpest, and surra—a disease confined to hot and moist climates—had yet been discovered. Three possible systems of dealing with them had, from time to time, been suggested which may be summarized as extermination, segregation, and inoculation. The first of the three, extermination of diseased or suspected animals, is the method in which most confidence is placed in European countries, but, owing to religious prejudices, is impossible in India. The second, segregation of infected animals, cannot be effected without legislative measures and a large staff of inspectors or police. Various proposals have since 1881 been submitted to the Government of India for legislative action, but have been, with the general concurrence of all local Governments consulted, condemned in view of the harrassment to the people and the great expenditure to the State that they would entail. The third measure, inoculation, which demands bacteriological investigation, is therefore the only preventive measure that may be possible, except indeed in those cases in which medicinal cures can be discovered. In this view the services of a competent expert, Dr. Lingard, were obtained from home, and a bacteriological laboratory was established at Poona. The climate, however, not proving favourable for laboratory investigation, the institution was transferred to a colder site in the Himalayas. In the meanwhile the character and causes of the destructive epidemic, known as surra, of which the wide distribution had not hitherto been suspected, and which is due to a blood para-ite, of which the life history could be worked out in any climate, were investigated by the expert at Poona, and the valuable results of his researches have already been published.

The Government of India is now considering the desirability of strengthening, by the addition of a second expert, the bacteriological staff attached to the Himalayan laboratory. Rinderpest, which was declared by Lord Mayo's Commission to be more destructive than all other diseases put together, and which is suspected to be probably amenable to vaccination, will be the primary subject of investigation. The enquiry is one to which special importance is attached, in view of the fact that it can only be conducted in a country in which, like India, the slaughter of suspected animals is not compelled by law. The discovery wherever made of an effective vaccine for rinderpest would therefore be a boon to every country in the world.

12. *Agricultural science* is a field in which provincial, as contrasted with national enquiry, can be usefully carried on. Indeed most of the work must be done by local observers and experts. Nevertheless it was deemed that, as urged by a conference of provincial officers in 1885, the services of a first class agricultural chemist of European reputation as an investigator of many difficult problems of importance connected with soils and cultivation throughout India, would, if attached to the imperial department, be of considerable use. His main duties would be, in consultation with provincial officers, to co-ordinate scientific investigations, to initiate enquiries, to construct working-plans for provincial farms, and generally to guide with his advice the course of experiment and to preserve continuity of action. He was intended indeed to be little more than the professional adviser of provincial departments.

It was in pursuance of correspondence with Her Majesty's Secretary of State on this subject that Dr. Voelcker was deputed by the Royal Agricultural Society of Great Britain to 'advise on the best course to be adopted in order to apply the teachings of agricultural chemistry to and in order to

effect improvements in Indian agriculture.' He fully confirmed the advice of the 1885 conference. He gave a long list of questions which demanded scientific investigation; dwelt on the necessity of scientific advice to provincial departments; explained the advantage of central direction for the preservation of continuity; recommended that instruction in agricultural chemistry should be provided for national colleges of agriculture; and urged that 'general agricultural enquiry' could not be conducted without men who had made agricultural chemistry a particular study. The conference which met Dr. Voelcker in 1890 supported his opinion that an expert was required for purposes of scientific investigation independently of the needs of agricultural education. Acting on this advice the Government of India applied for the services of two experts—one for assisting in the conduct of laboratory experiment and for lecturing in agricultural colleges; the other for the more important duty of guiding general agricultural investigation. The valuable report which Dr. Voelcker, himself an agricultural chemist, had made on the general conditions and needs of Indian agriculture, gave sufficient promise that the measure would lead to the ultimate development of the sound working-plans of scientific enquiry and experiment. Two experts selected by Dr. Voelcker, under whom they had served as assistants, were accordingly deputed for a term of five years. Sufficient time has not yet been afforded to judge of the practical success of their mission.

13. *Entomology* is a science which, as applied to agriculture, must be held to include investigation into the causes of all plant diseases. The loss occasioned by diseases of plants is even greater than that caused by diseases of animals. For instance, the value of wheat annually destroyed by the weevil alone is estimated at some crores of rupees. As in the case of cattle diseases, there are two distinct branches of enquiry—the one a survey of plant diseases, the general distribution and character of each, and the extent to which damage is caused by them; the other an investigation as to the causes of each disease, and as to the possibilities of prevention or remedial action.

Again, the diseases themselves must be classed under two broad divisions, *viz*, those which are due to insect pests, of which the life history is known, or can with comparative ease be worked out, and those which are due to obscure blights, of which the origin and transmigrations are imperfectly understood.

Up to 1888 entomology had not been represented. And since that year the only agency which the Government of India has had the opportunity of employing on research in this field has been one of the officers on the staff of the national museum at Calcutta, by whom a survey of the insect pests injuriously affecting agriculture was commenced in 1888 in correspondence and consultation with the officials of provincial departments of agriculture, and by whom, under the direction of the Trustees, a great deal of valuable information as to the character and distribution of insect pests has since been collected and published. The importance of prosecuting such enquiries with vigour under competent experts has been urged at many of the recent conferences, and the question of expanding the scheme of investigation with the view of covering the whole ground of enquiry is under the consideration of the Government of India.

The subject is one which has received considerable attention in the United States under the direction of the Washington agricultural bureau, and it is satisfactory to learn from the reports published by the Indian museum officer that many of the entomological enemies to agriculture are common to India and America, and have been more or less successfully combated to the material advantage of agricultural interests in the latter country. Practical results ought therefore, when the agricultural community are sufficiently educated to accord their co-operation, to be quickly achieved.

14. *Statistics* may properly be included in any scheme of scientific research, and occupy indeed the first place in the programme committed to the special departments created under the orders of Her Majesty's Secretary of State in 1881. The commercial and agricultural statistics of each province had, from the time when they were first collected, been, as a rule, reviewed and turned to practical use by the local authorities, but no measures had until recently been taken for their comprehensive examination and review by any central bureau. In 1895 proposals were submitted to and sanctioned by Her Majesty's Secretary of State for the constitution of an imperial department of statistics.

It was explained in the resolution announcing this measure that the disconnected manner in which provincial statistics had hitherto been compiled and published seriously detracted from their value; that their intelligent examination, collation, and discussion was necessary in order to secure uniformity and to render them as useful as they might and should be; and that they would henceforth be placed under the control of an officer skilled in such matters who would deal with them continuously upon a uniform plan, and would collate and publish the results in a properly digested form. The first series of reviews will shortly be issued by the newly constituted statistical bureau.

15. *Forestry* is a science which has during the last 20 years received much practical attention. A properly organized department was created in 1864, and has from that time continuously been under the central guidance of expert officials brought from Germany, to which country India owes the successful introduction of scientific forestry into this continent. The executive administration of forests in each province is in the hands of the local authorities, but the imperial government has nevertheless a large share in developing the system and principles upon which the science of forestry is practically applied. All forest officers may be said now to be experts, and for the most part their scientific investigations are carried out under the direction of the local governments whom they serve. On the other hand the education of the European officers in the science of forestry is provided for at a college supported by the imperial government in England, and of the native officials at a national school directed by an imperial officer in India. All schemes for the management and development of provincial forests technically called 'working-plans' are in their scientific aspect scrutinized and corrected by imperial officers: and the forests themselves are periodically visited by an imperial Inspector General with a view to the guidance of the executive officials in the scientific investigations which are to determine the character of the trees adapted to each locality and climate and the appropriate treatment of them. Finally, it is the task of the Government of India to formulate, in consultation with local governments and the imperial experts, the broad principles upon which the scheme of investigation and development is to be based.

16. The share in the national scheme of the agricultural enquiry which devolves primarily upon the imperial authorities has now been explained; the measures taken, since the new department was created in 1881, towards the expansion and promotion of scientific and agricultural enquiry under central direction have been briefly described; and the position in which the programme now stands has been roughly indicated. There are still many defects in the general scheme. It is still unequal and incomplete. What may be termed the older sciences—geography, geology and botany—continue for instance to occupy a much greater share of the State expenditure devoted to scientific investigation than the newer sciences which comprise researches into the obscure diseases of animals and plants Long standing departments have profited by the traditional respect which has been paid to them. Those of more recent birth have had to struggle against financial difficulties and against the opposition which is necessarily offered to anything new. The Government of India have not omitted to take under consideration the question of equalizing the claims of each branch of scientific enquiry, and will as time goes on take such opportunities as may offer themselves of expanding investigation in the more modern fields of research

17. The Government of India cannot, however, work alone. In view of the considerations which have been explained they are compelled to initiate and organize under central direction the various departments of national enquiry which have been described, but the work that is done in the field requires the active and sympathetic co-operation of all local and provincial authorities. As already indicated, this principle has been recognized by the Government of India in decentralizing, so far as it has been possible, the operations of the survey, of the geological and of other departments, of which the officers have been temporarily placed under the orders of provincial authorities. The occasion is now taken to explain to local governments and administrations the material aid which can be given to the development and to the effective working of the scheme by the active co-operation and intelligent advice of the provincial departments

of agriculture. Already in the proceedings of the recent conferences the Government of India is pleased to observe that strong recommendations have been recorded in favour of promoting active research, in connection with the nature, prevention and cure of plant diseases due to insect pests and other more obscure causes. So too at the agricultural conference of 1893 a request was made that botanical investigation might be made to take a more practical direction. Appeals such as these for the extension and development of scientific enquiry from departments and officials who have the opportunity of observing in the course of their field duties the real needs of the agricultural community will at the same time assist the Government of India in developing the scheme of investigation in right directions and strengthen their hands in organizing on a sound basis a staff of scientific investigators.

18. But the duties of agricultural departments will not end here. The officers of the departments should take every opportunity of working out, in conference and personal consultation with the expert investigators, a plan of operations, and of assisting them in obtaining the facts and statistics which they may require. Thus in the case of botany they should explain to the botanical expert when he visits or is invited to the province in what directions further information is required regarding agricultural plants, and should assist him to compile, and if necessary to publish a complete account of the field crops, fodders and other useful products of the locality. Similar action may be taken in the case of minerals in consultation with the geological officers. Again, they should make themselves acquainted with the measures being taken by the veterinary officers for the survey and study of cattle disease, and should assist them in obtaining the information which they may wish to collect from agriculturists. They should bring to the notice of the reporter of economic products any facts and details which are likely to be of interest to him, and supply him freely with information under all branches of their work which it may be desirable for him to publish; they should bring to the notice of the forest officers or of the authorities responsible for the administration of land the needs of each locality for forest or fodder reserves, and should assist them to devise useful schemes by which requirements may be met. Above all, they should take the utmost advantage of the advice and guidance of the agricultural experts attached to the imperial department whose services have been freely placed at their disposal by the Government of India, and who themselves stand in need of the local knowledge and special experience which only the provincial officers possess.

If during the next few years the active and intelligent co-operation of the provincial officers is thus accorded to the various departments and experts who are engaged in the investigations which directly or indirectly are required by agricultural interests, the Government of India are assured that, with the advice and assistance of local governments and administrations, they will be able to effect material progress in the great national work of scientific research.

FIFTH RESOLUTION.

Scientific and local enquiry under provincial direction.

1. It is important to bear in mind that the creation of agricultural departments in India has been due to the occurrence of famines. The Commissions appointed on the occasion of two serious famines, in 1866 and 1878, to advise the Government on the action to be taken for the mitigation of distress caused by failure of harvests in the future, recommended, as a principal measure, the creation of agricultural departments for the institution of scientific enquiry and experiment which should lead to the gradual increase of the food-supply of the country and to the greater stability of the agricultural outturn. The scarcity by which so many parts of the empire have, in the present year, been afflicted, brings renewed importance to the main object for which agricultural departments were designed, and imposes fresh responsibility upon all local Governments and Administrations to give the fullest possible effect to the policy advocated, a policy which was explained in the Famine Commission's report of 1880 in the following words :—

'Our report' they wrote 'has clearly shown how greatly agriculture pre-'dominates over all other interests and employments in which the people are en-'gaged ; how essential we think it that technical agriculture should be called 'in to enable the productive power of the soil to be applied in the most effective 'manner, not merely to add to the wealth of the country, but also to secure a 'food-supply which shall keep pace with the increase of the population.'

2 In the opening Resolution of 1881, in which the programme of the new department constituted was set forth, the Government of India endorsed this view ; they explained that the chief aim set before agricultural departments by the Famine Commissioners was 'the maintenance of agricultural operations at the highest attainable standard of efficiency.' They admitted that the first step must be the organization of machinery by which facts and statistics could be collected ; that the ascertainment of agricultural defects was necessary before remedies could be provided to cure them ; that the departments themselves must be made financially useful to the administration previously to embarking upon schemes involving material expenditure ; that as it would only be through, and by, the native community, that agricultural improvements could, on any important scale, be carried into the country, measures must be taken to secure their co-operation by a proper system of intelligent instruction in the schools ; but they agreed that when preliminary action had been taken to attain these objects, the principal efforts of the departments were to be directed to ascertaining how agricultural defects could be cured ; by what methods agricultural produce could be increased, and by what measures the stability of the agricultural outturn could be strengthened and maintained.

3. During the first few years after the constitution of the provincial departments the Government of India were content to know that the new establishments were devoting their main attention to the organization of the system under which agricultural facts and statistics were to be collected with a view to their utilization—firstly, for the introduction of remunerative reforms into the land revenue administration ; and secondly, as a basis for agricultural experiment and improvement. They proposed, however, that when sufficient progress had been made in this direction, renewed attention should be drawn to the main object for which the new departments were created. And an earlier occasion than that now presented would have been taken to discuss with local Governments and Administrations the general plan on which agricultural experiment and reform should proceed, but for the desire of Her Majesty's Secretary of State that on a matter of such great importance to the country the opinion of an acknowledged agricultural expert should first be obtained. It was in accordance with this view that Dr. Voelcker, the consulting chemist to the Royal Agricultural Society, was deputed to this country with instructions 'to 'advise on the best course to be adopted in order to effect improvements in

'Indian agriculture.' Acknowledging the judiciousness of a measure which was designed to prevent the inauguration of extragavant and ill-considered schemes of agricultural reform, the Government of India deemed it wise to take the utmost advantage of Dr. Voelcker's mission by inviting local Governments and Administrations to depute such officers and experts as might be most competent to assist him with their combined advice to meet him, on the conclusion of his first tour round India in 1890, at a general conference, the object of which was declared to be 'to secure the enunciation by the Government of India of those general principles which it is required to lay down in such form as will *primâ facie* be acceptable to local Governments.' Dr. Voelcker availed himself of the advice of the conference, of the value of which he recorded his acknowledgments, in the exhaustive report which he submitted two years later and in which he recommended that positive action should be taken in many directions. Again the Government of India considered it desirable that, before dealing with these recommendations, or formulating principles based upon them, a second conference of selected officers and experts from all provinces should be assembled in 1893 to discuss the measures finally suggested by Dr. Voelcker. The Government of India were thus constrained to await not only the recommendations of Dr. Voelcker himself and of the conferences which examined his proposals, but also the views and opinions of local Governments and Administrations, before endeavouring to formulate the principles upon which the agricultural reforms advocated by the Famine Commissioners should be attempted. In order to ensure a full and careful consideration of the questions concerned conferences were held for a third time in each province during the recent cold weather. The time has now come when His Excellency in Council is in a position to announce the general plan upon which the provincial departments of agriculture should be called upon to base their efforts to fulfil the principal object for which they were designed and created.

4. There is perhaps no subject upon which more diverse opinions have been expressed than that of the possibility of improving under official direction the agricultural conditions of India. It has been held that the natives of an oriental country have learned by experience the methods best suited to their own soils and climate; that practices successful in the western are unsuited to the eastern hemisphere; that the lessons taught on an English farm have no bearing on the cultivation of an Indian field; that the labour-saving machines of Europe and America are useless in a country where manual labour is extraordinarily cheap; that interference with the indigenous system of agriculture is dangerous; and that above all officials who have had no agricultural training are less suited than any others to direct or suggest reforms.

While admitting that these and similar arguments require that great caution should be exercised in framing official schemes for the improvement of agriculture in any part of the empire, the Government of India cannot allow them to be accepted as barring the prosecution of official effort. The time has indeed arrived when neither the imperial nor provincial Governments are justified in taking up any such position. Putting aside all other considerations, the strong expression given to opposite views by the two Commissions appointed by Her Majesty's Secretary of State to advise the Indian Government on these matters, *viz.*, by the Famine Commission of 1880, and by the special expert sent out ten years later—views confirmed by conferences of selected officers and experts from all provinces—has practically taken the decision of the issue out of their hands. At the same time the Government of India are convinced on independent grounds that official direction of efforts aimed at agricultural reform will be, and indeed has been, in this country productive of practical results of importance. It is true that hitherto, in accordance with the deliberate policy put forward in 1881, and for the reasons already explained, the attention of agricultural departments in the provinces has been diverted from rather than directed to positive agricultural reforms; that they have been urged to effect financial economies and to organize careful schemes of agricultural enquiry before entering upon a serious campaign in the field of agricultural experiment; that they have been told not to expect widespread results until the educational system of the country has been improved. Nevertheless in some provinces, and notably in the two presidencies of Madras and Bombay, not only has considerable advance been made in establishing schemes of useful

and scientific experiments under the direction of competent experts, but examples have been forthcoming of their financial value to the State and to the agricultural community. Failures have, it is true, been numerous, but as pointed out at the Bombay Conference a failure means at least success in setting a doubtful question at rest while one financial success outweighs the cost of many failures. A few instances, noticed in the proceedings of the recent conferences or in Dr. Voelcker's report, may be given of substantial and profitable results which amid many failures have followed agricultural investigations officially directed.

5. (1) In 1877 a conference attended by officers of the geological and of the revenue and irrigation departments of more than one province, of whom two were the late and present secretaries of the imperial department of revenue and agriculture, was held in a district of the North-West Provinces for the purpose of discussing the possible methods of reclaiming lands rendered unculturable by an excess of salts. There are in various parts of India, and especially in the north, several thousands of square miles of lands thus excluded from cultivation. An elaborate scheme of experiments including flooding, drainage, the application of chemical and other manures, and various methods of agricultural treatment, was laid down by the conference, and was carried out by experts of the agricultural and irrigation departments. After some years, a system of treatment, within the reach of any enterprising agriculturist, was developed which admits of the profitable reclamation of saline lands hitherto condemned as unculturable. Although the widespread extension of the process of such profitable reclamation cannot be expected until the land-owning classes have been so educated as to take spontaneous interest in the work, yet the results obtained have proved that a material addition to the cultivated area of the country can, in the course of time, be made, and that saline land once thoroughly reclaimed may be made capable of producing excellent crops. It is estimated that every hundred square miles that can be recovered will, if, as is often the case, the land is within reach of the canals, produce annually upwards of a million of maunds of food-grains.

(2) In Bombay the Agricultural Department undertook the introduction of European methods of manufacturing dairy produce. A Swiss expert was imported and experiments were set on foot. The following account of the results is given in the proceedings of the recent conference held in the Bombay Presidency. 'No enquiry was necessary to prove the superiority of the English and 'continental methods. What was essential was to popularize the improved 'methods and teach the use of improved machinery. Local dairies were 'established at Poona and Bombay. The demonstration was successful and as 'success was secured the departmental dairies were closed. Up to date about 'five lakhs of rupees worth of improved dairy machinery has been 'imported and the improved methods have spread throughout India. Milk 'separators are now privately set up in villages on railway lines and the separated 'cream imported to cities where it is made up into butter whence it is largely 'exported to foreign countries. The price of milk in out-lying villages has risen 'and milch cattle have increased in number.'

The success obtained in Bombay led to the temporary transfer of the Swiss expert to the North West Provinces where within two or three years he was established on the very saline lands which were visited by the conference of 1877, and which have been since converted into a profitable dairy farm whence dairy produce is now exported to Assam, Baluchistan, and other remote parts of India.

(3) Another experiment, initiated in 1885 at the instance of the Agricultural Department in a district of the North-West Provinces, and referred to in Dr. Voelcker's report, has borne fruitful results which have been recently noticed by the local Government. Land 'which was mostly a net-work of ravines affording grazing of the poorest description,' was experimentally enclosed as a fuel and fodder reserve. An expenditure of ₹3,000 has at the end of 10 years brought in an annual income of over ₹1,000 from the wood and grass raised in what had been, as Dr. Voelcker observed, simply waste-land. There are, it is believed, several hundreds of square miles of waste ravine lands on the banks of the large rivers of Northern India, of which the reclamation would be of material advantage to agricultural interests, and the success of the experiment has already led to the extension of the system in similar tracts.

(4) One more example may be given of material financial results obtained by investigations conducted in a scientific basis under official direction. Between 1870 and 1880 careful field-to-field enquiries were made in the North-West Provinces and later on by the agricultural and canal departments in the Bombay Presidency as to the cost of applying canal irrigation to cultivated land. These have led directly and indirectly to an improvement in the canal revenue of something like thirty lakhs a year not only without detriment to, but with distinct advantage to, agricultural interests, in view of the fact ascertained in both Provinces that the lavish use induced by unduly low rates of canal water on unmanured land leads to its deterioration.

These illustrations will suffice to indicate that important financial and agricultural advantages can be secured by experiments and investigations intelligently conducted under official direction. But they also show that the controlling officials must be assisted by competent experts; that continuity of intention and effort is necessary; that occasional success can only be obtained amid many failures; and that a long period of years is required for the definite ascertainment of positive results.

6. The Famine Commissioners strongly insisted on the necessity of employing, under the general direction of the provincial departments of agriculture, competent experts trained at home. 'There must' they wrote 'be employed a certain 'limited number of persons possessing superior technical and scientific knowledge 'of practical agriculture, whose task it would be to aid the Government in its 'endeavour to introduce improved methods of cultivation. These should be 'trained specialists and their number might probably be at the rate of two or 'three to a province and in all cases their scientific training should be followed 'by a year of practical application to agriculture before they are sent out to 'India.' The agricultural conference of 1890, while considering it essential that a director of an agricultural department should be provided with competent expert assistants, contemplated the possibility of their being eventually obtained from high class agricultural colleges in this country, but admitted the necessity in the meantime of a European training. This view was confirmed by Dr. Voelcker and by the agricultural conference of 1893. Dr. Voelcker advised that the expert assistants employed 'should have passed through a training such 'as that given at Cirencester or similar institutions followed up by—and this is 'essential—subsequent practical experience on a farm.' 'The reservation' he added 'as to practical experience is in my opinion so important that it constitutes 'my reason for advocating the employment, at first at any rate, of European 'rather than native assistants, though it is quite possible that natives will 'occasionally be found with the necessary qualifications.' The conference of 1893 endorsed this view in a resolution to the effect 'that it is essential to the interests 'of agricultural improvement that there should be in each province a highly-'trained technical assistant to the Director of agriculture, and that unless and 'until natives sufficiently well trained and qualified are available, he should be a 'European expert.' They further urged that the expert should be supplemented by a staff of native assistants trained in this country and that suitable institutions should be established for their education. The conferences recently held have in all the larger provinces supported the recommendations of the conference of 1893.

7. Influenced by this strong consensus of opinion, the Government of India have arrived at the conclusion that the time has now come when in every province in which no such arrangements have yet been made, a definite scheme should be drawn up under which a strong and efficient staff of agricultural experts will be within a limited period placed at the disposal of the provincial department of agriculture, and that, as recommended by the conference of 1893, unless and until natives sufficiently well trained and qualified are available, the staff should include a European expert. They are aware that the present moment is one at which no avoidable expenditure on new establishments can be immediately proposed, and that they must at present be satisfied if a programme is arranged, with due deliberation and regard to future requirements, to be carried out as soon as circumstances admit. But the very cause of present financial difficulties, famine, is in itself, as the Commissions of 1866 and 1878 have indicated, the strongest argument which can be used in favour of expenditure as soon as financial pressure is relieved of which the main object is increase of the

food-supply; while the few illustrations which have been given of the financial and agricultural advantages which have already followed intelligently directed experiment, indicate the remunerative character of the outlay which will be incurred, and the increasing protection which will be afforded thereby to the agricultural community against the difficulties and distress in the seasons of failure which must inevitably occur from time to time in future years.

8. These observations do not apply with equal force to all provinces. In the two presidencies of Madras and Bombay, for instance, the measures already taken or contemplated for the equipment of the agricultural department are possibly adequate; while in the two provinces of Burma and Assam where agricultural conditions are of exceptional character, and where rice is the staple product, action is not so urgently called for as in other parts of the empire. But the Government of India desire to be informed by every local Government and Administration what in their opinion will be the full staff of agricultural experts and assistants which should, when circumstances admit, be placed under the control of the provincial department, in order to enable it to efficiently prosecute its primary and most important duty.

9. The employment of European experts and a trained staff of assistants involves the establishment of experimental farms. On this subject nothing has been recorded in the proceedings of the recent conferences which affects the opinion of the Famine Commissioners and of Dr. Voelcker that 'experimental enquiry conducted by means of experimental farms is a necessity in India for the development of agricultural improvement.' To what extent experimental farms should be multiplied in any one province is a question which it must be left to each local Government to decide from time to time as the scheme of agricultural experiment is developed. 'The decision must' writes Dr. Voelcker 'be partly based on considerations of expenditure and staff, but the main consideration should be whether there is anything definite to learn, a particular question to solve, and whether this has any relation to the agriculture of the country around.' In the meantime the Government of India have no hesitation in requiring that the definite scheme for which they have called should include, at least one central experimental farm adequate both in area and in the staff with which it is equipped to ensure the conduct of experiments on the system advocated by Dr. Voelcker.

10. It has been frequently urged that a single experimental farm in a large province is on account of the varying character of soil, climate and other agricultural conditions inadequate for the purpose of testing suggested improvements, for ensuring the applicability of methods more or less successful in one locality to other parts of the province; or for bringing useful results to the notice of the agricultural community of various districts. It was partly for these reasons that Dr. Voelcker advocated the establishment of supplementary 'demonstration farms' on which the results of useful experiments might be tested and exhibited. The Government of India are not afraid to look forward to a time when native gentlemen and landlords under the influence of a well-designed system of general education will undertake the expansion of experiment and demonstration on their own estates, but they trust that in the meantime the utmost advantage will be taken of the opportunity to set them an example by utilizing estates under Government management for the intelligent trial of agricultural improvements. This policy was strongly urged by the Famine Commissioners who advocated that managers of such estates should act as an enlightened and prudent landowner would act in respect to his own property by utilizing the results of science and adopting any well-tested and clearly demonstrated improvement in methods of farming. The Government of India have been pleased to observe that prominent attention has recently been called to this opening for the expansion of agricultural reform by the Lieutenant-Governors of Bengal and of the North-West Provinces, and they desire that the directors of the provincial departments and managers of estates under official control may in every province be required to give their earnest and continuous attention to this plan of developing and testing all agricultural experiments which have in them any reasonable chance of possible success.

Where estates under the management of Government officers are not available, it may be desirable to consider Dr. Voelcker's suggestion of the establishment of demonstration farms.

11. The system on which experimental and demonstration farms should be conducted has not been examined at any of the conferences which have been held, nor in the opinion of the Government of India could any precise recommendations have been usefully formulated for general guidance. Dr. Voelcker's chapter on the subject offers many useful suggestions which should be carefully considered by the agricultural staff responsible for the conduct of experiment, but it must be left entirely to the officers of the provincial departments to decide, in consultation with the imperial chemist, what the detailed arrangements should be.

It is natural that these should differ in each locality. But there are certain broad principles noticed by Dr. Voelcker to which prominent attention may be drawn. The *first* and most important is the necessity of a working-plan which, as in the case of forests, must be continuously maintained and, unless for strong reasons sanctioned by the director of the department, not interfered with until the experiments once set on foot have yielded definite results. The *second* is 'that the issues in each case should be simple and that the object of an experiment should, as a rule, be the only varying factor involved in it', in other words that an experiment should be confined to the trial of a single issue. The *third* is that the recording of results should be as far as possible on an uniform plan, and that they should be published and circulated for general information.

The framing of the working-plan and the system on which results should be reported are matters which should be arranged in consultation with the imperial officer who has been placed, with this object, at the service of the provincial departments.

12. When in any province the department of agriculture has been equipped with a European or equally competent expert, with a staff of trained assistants, and with an experimental farm or farms, a programme or working-plan will be formulated not merely, as above directed, of the experiments to be carried out on the farms, but also of the series of investigations which are to be made into the defects in the agricultural system for which it is the object of experimental action to provide a remedy. Dr. Voelcker, in his report, gives a long list of *primâ facie* defects, to which the attention of agricultural departments should be directed, and it is known that many others exist to which Dr Voelcker made no reference. The question how these should be dealt with has received prominent attention at the conferences which have recently been held, and the general conclusion arrived at has been that it would be desirable—*firstly*, that a cursory enquiry should be made which, by the examination of the agricultural system in a few typical districts, would indicate roughly the most important defects for the removal or minimizing of which remedial action is required; *secondly*, that when this had been done, enquiry and experiment should be concentrated for a definite period on a very limited number of 'defects.' It was generally agreed that, though exceptions to this course might be occasionally made at the discretion of the director of the department, it would be found embarrassing to enter upon a campaign at one and the same time against all the various evils known or suspected to interfere with agricultural prosperity. This view commends itself to the Government of India who, while not desiring to restrict the power of the agricultural departments to expand their field of enquiry for good and sufficient reasons, think it desirable that local Governments and Administrations should understand that His Excellency the Governor General will be satisfied to know that at least one prominent agricultural defect is being subjected to searching investigation and experiment in each province.

13. The adoption of this view renders it inexpedient for the Government of India to attempt anything like a review of the numerous recommendations contained in Dr. Voelcker's report for the improvement of agricultural conditions. Taken one by one the subjects with which his report and the proceedings of the 1893 conference deal will occupy the attention of the agricultural departments for very many years to come, and each subject must be carefully studied by itself in all its bearings at the time when it is taken up. The illustration given in the succeeding paragraph will explain what is meant by the term 'agricultural defect' and the general character of the enquiry and action needed in dealing with it.

14. The order in which defects should be selected for successive enquiry and experiment will depend on the conditions prevailing in each province and must

be left to the discretion of the directors of the provincial department under the orders of the local Government. But the Government of India may point to one subject which, in view of its important and universal bearing on the agricultural outturn, they deem to deserve special attention in every part of the empire and which, if no reason to the contrary exists, they would be glad to see taken up as the first subject of enquiry in all provinces. The subject is this. In other oriental countries, *e.g.*, in Japan and in China, as well as in the western countries of Europe and America manure provided by cattle and other animals is, as a rule, whether liquid or solid strictly conserved. In India there are great difficulties in the way of preventing the latter from being used as fuel, but the former or liquid manure is mostly allowed to run to waste, and the practise of securing it for the fertilization of the field is hardly known. The results of scientific experiments in America have however indicated that the productive value of the liquid is even greater than that of the solid manure and lead to a conclusion that the utilization of the former would very materially increase the food-supply of the country. The defect may then be thus defined:—'a neglect to use a highly valuable manure which is within easy reach of every cultivator.'

The advantages of dealing with this particular agricultural defect are that any reform which can be effected does not involve serious outlay of capital; that it is one that can as proved in China be carried out successfully in a tropical climate and without European appliances; that the neglected manure being within the reach of every cultivator any increase in produce which can be effected by it is capable of indefinite multiplication.

15. As the discussions at the recent conferences imply that some doubt has existed as to the system on which the investigation of agricultural defects should proceed and also provide some useful suggestions for a plan of enquiry, an indication will be given of the general method which may be followed in conducting an investigation into the subject which has been suggested for enquiry.

Firstly.—Existing facts and practices must be ascertained. For this purpose local enquiries should be made by the director, the agricultural experts, and their assistants in convenient localities as to the use, if any, which is now made, of the liquid manure in each district or agricultural tract.

Secondly.—A series of questions should be drawn up, and circulated for reply to managers of Government estates, circle inspectors, officers of the land record staff and other selected officials as well as to any intelligent landowners or farmers willing to take part in the enquiry, with the view of eliciting detailed information as to existing usages in every part of every district.

Thirdly.—A careful study should be made of the conclusions arrived at in America and Europe both as to the best methods to be adopted, and as to the actual value in increased outturn, of the application of liquid manure to various crops.

Fourthly.—The system in other oriental countries should be ascertained. In connection with this and the previous question the imperial officer, whose duty it would be to provide the required information, should be consulted.

Fifthly.—A series of experiments should, in consultation with the imperial officer, be set on foot at the experimental farms, with the view of ascertaining how the most approved practices in other countries can be brought within reach of the Indian cultivator by the adoption of simpler methods and cheaper appliances.

Sixthly.—When methods promising *primâ facie* success have been worked out on the experimental farms they should be subjected to more practical trial on estates under Government management or on the farms of intelligent landowners willing to accord co-operation.

Seventhly.—The progress made in the investigation in each province should be periodically communicated to the editor of the *Agricultural Ledger* for publication in that journal in order that the agricultural department of each province may be kept informed of the character and results of experiments being made in every other province. It is understood that already in some provinces investigations and experiments, the result of which would be of general interest, have already been set on foot. An account of these should be published.

16. The defect which has in this case been suggested as the subject of general enquiry is the neglect to use a manure which is universally available, and the application of which would undoubtedly result in a material increase in the

food-supply of the country. The full investigation of the subject will, if it is taken up, probably occupy many years. The same may be said of many other enquiries. And for this reason doubt has been expressed at one or two of the recent conferences, whether the policy of confining attention to one subject at a time is desirable, and whether it should not be left entirely to the discretion of the provincial agricultural departments to decide what the scope of their enquiries should be.

17. In order to prevent misapprehension on this point, the Government of India consider it necessary to explain that their intention is not so much to demand any rigid restriction of the provincial programme as to point out that the absence of any limitation of the field of experiment has in many provinces appeared to lead to indefiniteness and uncertainty in design, and to want of continuity in action; that enquiries commenced by one officer have been put on one side by his successor; that the agricultural defects and difficulties which have to be dealt with are, as indicated in Dr. Voelcker's report and in the proceedings of the agricultural conferences, so numerous and grave that any attempt to deal with them simultaneously and exhaustively cannot, with the small staff at the disposal of the agricultural deptartment, fail to prove embarrassing; that the investigation of any one subject must, if it is to yield successful results, be complete and thorough; that when a question has once been taken up for examination it should not be abandoned until an answer to it has been found; and that the programme or working plan of the department must, however much or little it may be restricted, be at least clear and definite.

18. The Government of India have in the immediately preceding paragraphs been dealing with the complete and thorough investigation of large and important questions, and have not intended to refer to the working plan of an experimental farm. The main object of such a farm is the trial of a long series of continuous experiments for the purpose in each case of proving a single fact. Here the working plan may legitimately include the simultaneous trial of as many experiments as the director, guided by his advisers and by the imperial expert, may determine to be eventually required for the broader investigation of any subject. Thus, assuming that the question of improved seed grain is one which has been decided to defer for five years, there would nevertheless be every reason to ascertain in the meantime by continuous experiments on the farm plots whether selection of seed does in five years make any material difference in the outturn of any particular crop. What would be deferred to the fifth year would be the general investigation into the practice and conditions obtaining in each district.

19. Subject to these considerations the discretion of the departments to expand the field of enquiry and experiment need not, especially in those provinces where an adequate staff of experts and assistants has been provided, be restricted by any absolute rule. It would not indeed under any circumstances be desirable that the investigation of a single subject, such as that offered as an exemplar, should be carried to the end before a new question is taken in hand. The time and attention which each subject demands must necessarily be greater in the first year or two of enquiry than in subsequent years when the most useful lines of experiment have been determined. What the Government of India do wish to demand is that every agricultural department should always have before it for special and thorough investigation at least one agricultural defect of importance; and that if more than one are brought under enquiry at one time their number should not be so great as to lead to desultory and imperfect action in the case of any one of them.

20. In conclusion it must not be forgotten that an important factor in the success of the working of a provincial agricultural department is the qualification of the director himself. This officer should, wrote the Famine Commissioners in the first part of their report, be chosen for his knowledge of the condition of the people and particularly of the agricultural classes, while in the second part they advised that a certain number of officers should receive a preliminary training at home before going out to India, and that meanwhile any officer selected should be allowed to spend a year or some longer period at a school of agriculture in Europe. The Government of India granted this last permission, of which advantange was taken in two provinces, and in 1889 local Governments were asked to offer their opinion as to the manner in which junior

officers could be best trained in future so as to secure a succession of efficient officers to an appointment which requires technical knowledge and special experience. The replies that were received were almost unanimous to the effect that the director should be an officer who had served an apprenticeship in the settlement department, and in view of the importance then attached to the organization of the land record system which was to form the basis both of land settlements and of agricultural enquiry, the Government of India were content to accept this decision. There seems, however, to be no doubt that in some provinces questions of agricultural improvement have been too greatly subordinated by the director to land record work, and that as suggested by Dr. Voelcker the agricultural duties of the office have been practically neglected. The Government of India are not disposed to press the view of the Famine Commissioners that training of a technical character in an agricultural college is necessary, though it certainly may be useful, for the qualification of a civilian officer to direct the agricultural department. If the department is equipped with a competent European expert and with trained assistants, the general direction of the department may, they think, be left to a carefully selected officer who has shown aptitude and inclination for the class of duties which the superintendence of the department involves. They are not, however, assured that in all cases sufficient consideration has hitherto been given to the agricultural side of the departmental programme in the choice of the officer to whom the control of the department is committed, or as suggested by Dr. Voelcker, that progress in agricultural enquiry and experiment has not been hindered by too frequent changes in the incumbency of the appointment.

21. Akin to this important matter is the question placed before the recent conferences whether with a view to their co-operation in the development of agricultural enquiry and improvement the training of junior civilians could not be improved, and in one province—Bombay—in which considerable attention has been given to the subject, it was suggested that all young officers should go through a short course at an agricultural college or farm during which they might at least learn something of the various crops raised in the province and of the general agricultural system which prevails in it. The question is one which deserves the consideration of local Governments and Administrations. Among those 'who have a bent towards natural sciences and practical investigations' it will probably be easy to appoint an officer from time to time to the station to which the college or farm is attached to receive a course of instruction in the agricultural department, in addition to their ordinary duties. From these eventually successors to the directorship may be chosen. It is of special importance too, that now that settlement operations are coming under contraction, some steps should be taken to ensure the better qualification of a certain number of officials to co-operate in the scheme of agricultural enquiry. On this subject the Governor General in Council invites the further opinion and views of all local Governments and Administrations.

SIXTH RESOLUTION.

Agricultural Education.

1. The subject of agricultural education in country schools was one of those to which the Famine Commissioners, in their Report of 1880, advised that the attention of agricultural departments should be directed. In the opening resolution of 1881 the Government of India pointed out the necessity of securing the co-operation of the native community in working out any programme of agricultural improvement, and in correspondence which ensued with Her Majesty's Secretary of State on the general policy which should be followed by agricultural departments represented that no general advance in the agricultural system could be expected until the rural population had been so educated as to enable them to take a practical interest in agricultural progress and reform.

2. These views were confirmed by the agricultural conference of 1888, which urged that the measure most immediately demanded was that of educating teachers competent to give instructions of the required kind, and in the same year the Government of India, dealing with the proceedings of the 1888 conference and with the report of the Finance Commission on the expenditure of the new department, issued a resolution in which a clear explanation of the general policy advocated was put forward. It would be the duty of every Government, it was urged, to ascertain by careful and continuous experiment and enquiry what improvements were possible, and during the long period of years which these investigations would occupy, to give serious attention to the education of the agricultural classes. Extravagant expenditure on attempts to introduce improvements, until they had been thoroughly tested by experiment and until the agricultural population was prepared to receive them, was to be avoided. A resolution issued in the same year in the Home Department on educational policy placed a direct obligation on agricultural and educational departments in every province to work out a practical scheme of agricultural education

No. 345-55 C. I. dated 25th March 1890.

3. In one province, Madras, in which an agricultural college had been established for many years, considerable attention had been already given to the educational question, and when in 1889 a committee, appointed by the Government of the presidency to examine the working of the agricultural department and of the college, submitted its report, it was found that the conclusions arrived at pointed in the same direction. 'It is to school and college education,' wrote the Madras Government, 'that the committee attach most importance, and more than half of their report is devoted to this subject.' In view of the fact that the practical experience attained and the serious consideration given to the question for a long period of years in the Madras presidency entitle the opinion of the committee to great weight, a brief exposition of their views, confirmed as they have been by the conferences recently held both in Madras and in other provinces, deserves a prominent place in this resolution. Their whole report indeed is one which merits the careful perusal and attention of all officers connected with the work of agricultural administration

4. The main defects in the Madras scheme of agricultural education were found to have been that instruction was specialized in a college of high class, had no connection with the educational curriculum of primary and secondary schools, and was confined to students designed for agricultural employment either as officials or on their own estates. The verdict of the committee was this: 'We 'do not look forward,' they wrote, 'to all students of the college engaging in 'the direct exercise of agriculture; we are firmly convinced that the end in view, 'the dissemination of higher scientific knowledge of agriculture and of the scien- 'ces allied to it, will be greatly furthered by leavening the Revenue, Forest, Edu- 'cational and other Departments and callings by men who have received a 'thorough course of instruction in the agricultural college.' Turning then to the broader question of general education, they continued: 'We are persuaded that 'no means of increasing the efficiency of the Agricultural Department can be 'really effective unless the people are taught to understand what is defective in

'their present system of agriculture, where it is capable of improvement, and 'the best means to that end. We believe that this can only be done, first, by 'extending their general education, *i.e.*, by teaching them not only to read, 'write and cypher, but to use their knowledge so that they may, in however 'humble a manner, become thinkers, observers, experimerters * * * * *. Unless 'the intelligence of the cultivator be developed, and developed in such a direc-'tion as to lead him to devote a better trained intelligence to his own art, and 'to apply thought, observation, and experiment to matters which concern his 'material well-being, we believe that progress, if not absolutely impossible, 'must be so low as to effect little appreciable change in a generation. We 'assume, as an axiom, that the wealth of this country may be enormously in-'creased by improved methods of cultivation, by the introduction of new pro-'ducts, and by the rational treatment and development of stock. Education 'is the mightiest lever that can be applied, however great and beneficial the 'influence on the intelligence of the people of railways, roads, canals, good 'markets, and good ports and outlets for produce may be; these are necessary 'and helpful to agriculture as educators, but they must fail to produce the 'greatest material progress posssible, and secure that progress when attained, 'if the people remain ignorant and wedded to bad and, often, injurious 'methods.'

5. Impressed by the value of these conclusions, founded as they were on practical observation of the inadequate results of an imperfect system, the Government of India commended them to the special notice of the agricultural conference which was to meet the Secretary of State's delegate, Dr. Voelcker, in 1890. That conference fully supported the Madras views. It urged the extension of primary education; the combination of agricultural teaching with it; and the employment of students agriculturally trained in all departments of Government service in which an opening could be made for them. In convening the agricultural conference which was to deal with Dr. Voelcker's Report in 1893, the Government of India again drew the prominent attention of local Governments and administrations to the subject, and alluding to the request contained in the Home Department's resolution of 1888, that the Educational and Agricultural Departments should be required to work out in concert a practical programme, stated that 'it was essential that, with the co-operation of the 'Educational Departments, measures should be taken which will render the 'agricultural population capable of assimilating new ideas and of understanding 'any suggestions made to them, as time goes on, for the improvement of their 'agricultural methods, and which will qualify them to take that active part in 'the scheme of agricultural reform without which no effective results can be 'expected.'

6. These views were confirmed by the conference of 1893, and in the Home Department's resolution of 1894, reviewing the progress of education, the policy of 'making instruction in the rudiments of agriculture part and parcel of the 'primary system of instruction in the country rather than teaching it as a subject 'apart from the general educational programme,' was impressed upon the Education Departments, at the same time it was admitted that there was already evidence of a general tendency in the provinces to modify the course of primary education in a practical direction.

7. Finally, in 1895 the Government of India decided to invite local Governments and Administrations to require the subject to be thoroughly examined in each province by a committee which should be composed of selected officers of the provincial revenue and agricultural and educational departments, and which an officer on the imperial staff should be permitted to attend for the purpose of providing facts and statistics from other provinces.

8. Hitherto general principles rather than actual practices had come under consideration. The leading objects of discussion were now to be the positive ascertainment of any defects that might exist in the present scheme of primary education; the extent to which effect had already been given to the principle of including agricultural and practical instruction in the ordinary school curriculum; and the reforms which were still possible in the direction of developing in the younger students the habit and powers of observation. In bringing these questions forward in 1895 the Government of India took the opportunity of explaining in the appended Resolution that the essential matter was not so

much the adaptation of the educational scheme to the training of agriculturists as the framing of the plan of instruction so as to promote in the pupils taught the power of assimilating any kind of technical instruction; that the mere acquisition of knowledge was to be subordinated to the development of faculty; that the powers of observation should be brought into play and improved by exercise; and that the actual teaching of a particular trade was of less importance in the first instance than educational methods which will adapt the pupil for the subsequent of technical of any description. These views were supported by quotations from recognized authorities. The late Professor Huxley had written that 'a system of education which does nothing for the faculties of 'observation, which trains neither the eye nor the hand, and is compatible with 'utter ignorance of the commonest natural truths may be regarded as strangely 'imperfect.' In a report of the Royal Commission on technical instruction it had been stated that while 'the system hitherto prevailing in English rural schools 'actually unfitted the children of farmers for an agricultural career, yet there was 'nothing in any scheme of rural education specially designed for the agricultural 'classes which should unfit the children for any other career for which they 'were specially suited.' The scheme was to be based, they said, on what a child could see round him, and it followed therefore, as pointed out by the agricultural conference held at Simla in 1893 that 'any such system established in rural 'schools must, for whatever class intended, acquire an agricultural colouring 'because the surrounding objects are themselves agricultural.'

9. His Excellency in Council has been much gratified by learning from a perusal of the proceedings of the recent conferences and of the reviews thereon by the local Governments and Administrations that these views have met with universal acceptation; that much has already been done to give effect to the principles embodied in them; and that the deliberations of the conferences are likely to lead to many important and practical reforms in the same direction. It is interesting also to observe that since the discussions were held a strong movement has been made in the United Kingdom for legislation with the object of removing the defect, noticed in the Resolution of 1895, *viz.*, the absence of any such preliminary training in primary and secondary schools as is required to enable the students to understand and assimilate the teaching offered in technical institutions.

The conclusions arrived at in the course of the recent discussions will now be briefly explained.

10. The basis of the enquiry which the conferences were invited to make in connection with the adaptation of the educational scheme to the interests of agriculture was a series of recommendations which were recorded by the agricultural conference of 1893 and which grouped themselves under four heads:—

I.—Primary education.

II.—Readers and text-books.

III.—Training schools.

IV.—Higher education in agriculture.

These divisions may be conveniently taken under separate and successive consideration in the present resolution.

11. *I.—Primary Education.*—The definition of "primary education" adopted in 1886 by the Education Commission in their report was 'that 'primary education be regarded as the instruction of the masses *through the* '*vernacular* in such subjects as will best fit them for their position in life and be 'not necessarily regarded as a portion of instruction leading up to the University,' and they advocated that 'the standards of primary education be revised with a 'view to simplification and to the larger introduction of practical subjects such as 'native methods of arithmetic, accounts and mensuration, the elements of physical 'and natural science and their application to agriculture, health and industrial 'arts.'

12. The general principles thus put forward are in sufficient accord with the policy which, as already explained, has met with general acceptance, but are, under the strict letter of the definition adopted by the Commissioners, only applicable to vernacular instruction. It would, in the opinion of the Government of India, be unfortunate if this restriction were to be held to exclude any lower

schools, in which education is commenced from the beginning in English, from the material advantages afforded by a system of instruction based on principles which are almost uniformly accepted in all civilized countries, which were advocated by the Education Commission, and which now, after discussions extending over many years, have been strongly urged for adoption as a basis for all educational schemes by the general consensus of provincial authorities. In most of the provinces of India no such exclusion is possible. But the position is not the same in all.

13 The despatches received from Her Majesty's Secretary of State in 1854 and 1859 on the subject of national education indicated that a distinction should be made in the educational courses prescribed for the rich, middle, and poorer classes respectively. In several provinces the same elementary instruction in the vernacular is provided for the younger pupils of all three classes, and can be moulded into any form which the local government considers to be best. The trifurcation comes later. In some of the eastern provinces on the other hand, a separate scheme is provided for each of the three classes from the lowest stage and in such institutions as may adopt English as the language through which elementary instruction is conveyed the course of study may be determined not so much by the provincial authorities as by the requirements of the course leading to educational diplomas and degrees.

14. The Education Commissioners represented that 'their attention was 'not called to this important variation in the educational scheme of different 'provinces until discussions on primary education had been closed when it was 'too late to find time for its consideration'; they took some pains, however, to marshal all the arguments on both sides, but stated that 'in the conflict of 'views, and considering that no opportunity had been given of arriving at a 'definite conclusion, they refrained from expressing an opinion.' They explained at the same time that by the system under which the three courses were kept entirely distinct the main object sought was 'to keep down the standard to the 'requirements of the masses and not to raise it by considering the wants of the 'well-to-do classes who are not, properly speaking, the masses' The Government of India have no desire to enter on the present occasion into any detailed discussion of the merits of the two systems, but consider it expedient to point out that the reforms now suggested in the primary education of vernacular schools are in no way connected with the special wants of the well-to-do classes, that they are founded on general considerations equally applicable to every class; and that if they conduce to the better development of the intelligence of all children, of whatever condition in life, it would seem to be a question whether this advantage should be withheld from the well-to-do classes. The question is one which seems at least to deserve the consideration of local Governments and Administrations of provinces in which any class of school is excluded from reforms admitted into the general scheme of early education.

15 Turning now to the position of primary education in schools—and in most provinces this means all schools—in which the plan of elementary instruction is controlled, under the direction of the local Government, by the educational departments, it appears to have been ascertained in the course of discussion at the recent conferences that while in many provinces, and notably in Bombay, material effect had been given to the principles advocated, yet that substantial defects did often exist which it would be desirable to remove. The nature of the imperfections discovered and the character of the remedies suggested will be more easily comprehended if it is first explained what the plan of education ought to be if based on the principles supported at all the conferences.

The first point is that in all schemes of practical education designed to train pupils at an early age in habits of observation, the readers and text books—which should deal as far as possible with familiar objects—must be illustrated and explained by the concurrent exhibition of the objects themselves or of pictures and models of them. Thus 'object lessons' play an important part in the elementary teaching of every 'subject,' whatever that subject may be, which enters into the curriculum. Even such an abstract 'subject' as arithmetic may be elucidated by 'object lessons,' while in communicating a 'knowledge of the commonest natural truths,' to use Professor Huxley's phrase, 'object lessons' are absolutely essential.

The next point is that all pupils should have the opportunity of gaining a 'knowledge of common natural truths'; in other words, should be taught elementary science. It is not necessary for this purpose that the pupils should be taken through a course of lessons and text books dealing with each particular science from the a b c of it to a very advanced stage. School boys have no time to receive instructions in every science from the beginning to the end. But that they have no time to go to the end is no reason why they should not be so taught that they may grasp the elementary facts and principles on which the most important sciences are founded; that they may obtain an intelligent knowledge of common natural truths; and that they may have their faculties so developed that in their subsequent career they can easily assimilate instruction in any subject or science which they may elect to take up.

16. Three defects, involving important departures from the canons laid down in the preceding paragraph, were, in one province or another, found to exist. The *first* was that in the educational curriculum 'object lessons' are sometimes treated as a separate 'subject,' and not only so, but as an 'optional subject,' that is to say, pupils may choose whether or not they will learn 'object lessons' at all, and if they do so choose, they study 'object lessons' as something apart from other subjects. It has now been admitted at all the recent conferences that 'object lessons' should be treated as a 'compulsory *system*' of education and not as an 'optional *subject*.' This indeed is how they are treated in Bombay and in some other provinces where readers and text books in practically all subjects are illustrated and explained by 'object lessons.'

17. The *second* defect was that many pupils are debarred from attaining a knowledge of common natural truths and principles because the curriculum is so framed as to exclude the teaching of elementary truths and principles in any science or subject, unless that science or subject is followed by the pupil to the very end of the school course. Thus 'geography' is in some provinces allowed to be an optional subject, and the lowest or most elementary 'standard' in geography, *i.e.*, the 'standard' laid down for those boys of the lowest class in a school who take up that subject is 'instruction in the meaning of a map or plan,' supplemented by 'making maps of the school room and its compound or by comparing maps of the village and of its surrounding fields with the facts on the ground.' It is obvious that all boys whether they take up geography or not should be taught in this way the meaning of a map or plan, a proper comprehension of which is necessary for all professions, including agriculture, as well as for the ready understanding of all educational works which are illustrated by maps, plans and diagrams. But under a curriculum which makes 'geography' an optional subject and gives to it exclusive possession of instruction in the meaning of a map or plan, a boy who elects not to learn geography is deprived of the opportunity of learning what a map or plan means.

18. The same subject, geography, may be employed to illustrate the *third* defect, which is that for purposes of elementary education instruction in any one subject taken up is carried too far; so far indeed that time is not left for others equally important. Thus boys who had taken up geography were found to be learning by heart the name and position of every county in England; the advantage which when they first joined the school they had gained over other boys, in learning how to read maps and how to draw plans, was thus handicapped later on by the disadvantage involved in the waste of time devoted to acquiring knowledge practically useless to them.

It was admitted at the conferences where the subject was discussed, that when once the principles of geography have been learned, and a knowledge of those geographical facts likely to be useful to the pupil through life has been gained, valuable time should not be lost in a wearisome study of details of which a knowledge does nothing to improve the faculty, and is otherwise of little or no positive use; that the time would be far more usefully employed in acquiring a knowledge of 'common natural truths' in other branches of science.

19. It is not the intention of the Government of India to follow province by province the discussions which turned on these questions or to criticise the suggestions made in the direction of reform at each conference. They deem it

sufficient to observe that there seems to have been little difference of opinion on the questions raised; that where defects of the kind described had existed the officers representing the education departments, supported by the other members of the conferences, have agreed to suggest appropriate reforms; and that the local Governments have in every case indicated their willingness to accord favourable consideration to their proposals.

20. On three points only do they consider that definite suggestions or remarks may be useful. The first is this: It appears to have been rightly assumed at the earlier conferences that the term 'elementary science' may be so widely interpreted as to include object lessons illustrating 'natural truths,' the meaning of a map or plan, and other simple subjects of the kind as well as the elements of botany, of zoology and of other so-called 'sciences.' Taking this view they suggested that 'elementary science' thus interpreted should be a 'compulsory' and not an 'optional' *subject*. This was a step in the right direction. But at the later conferences it was advised that 'elementary science' should not appear in the curriculum at all as a separate subject, but be taught in school readers illustrated by object lessons, care being taken that no important elementary science should be omitted from the books supplied to the reading classes. This latter plan has already been adopted in the educational scheme of the Bombay Presidency, and to a certain extent in that of some other provinces, and is commended by the Government of India for favourable consideration elsewhere.

21. The second matter to which attention may be drawn is of importance In the educational despatch of 1854, Her Majesty's Secretary of State quoting from the Lieutenant-Governor of the North-Western Provinces stated that the land-record system in Indian provinces 'offered the stimulus of a direct interest 'for the acquisition of so much knowledge as would enable each man to look 'after his own rights' thus indicating that it would be an advantage to the community to include instruction in this subject in the educational course. The conference of 1893 took up this question. 'The ultimate objects,' it was said, 'at which the education of an agriculturist aims, are not all of them directly 'connected with the tillage of the soil. It is of importance to every cultivator 'that he should be able to understand and interpret the meaning of entries in a 'cadastral map; that he should have proper acquaintance with the system of 'rural accounts; and that he should be able to read and comprehend the land-'records maintained by the official staff. For these purposes he should receive 'instruction in drawing, arithmetic and such simple surveying and mensuration 'as can be easily taught to any boy. It is equally desirable to bear in mind both 'that the objects enumerated in the preceding paragraph are often of as much 'importance to those who, though not actually tillers of the soil are likely in 'after life to hold any interest in land as to those who cultivate it, and that 'instruction in the direction indicated is as useful for general purposes of educa-'tion as any other kind of teaching. It is perhaps even more useful.'

The same arguments were pressed at some of the recent conferences. The plan had already been introduced in some provinces, among others in Assam, where 'the advantage of teaching the people the use of the cadastral village map' was held by the director of the land-record department to be 'very great as gradually enabling them to become more independent of officials in arranging their own affairs.' The Financial Commissioner of the Punjab, supported by the conference, went further in urging that as the bulk of the population, whether actually engaged in tillage or not, were interested in land, instruction in the village map and records would be generally useful to the whole community. The Government of India, adopting the same view, have no hesitation in inviting local Governments and Administrations to require their educational officers, in consultation with the departments of land records, to devise, where this has not already been done, some plan under which instruction in village maps and land-records should be included in the curriculum of education for all calsses. Similar arguments exist in favour of instruction in simple commercial accounts.

22. The third matter which deserves notice is the position which 'agriculture' should take in the school course. Two questions were considered. One whether 'agriculture' should be taught as a separate subject at all, or, like

elementary science, be embodied in readers; another whether, if admitted as a separate subject, instruction in it should be optional or compulsory.

It seems to have been generally agreed that in the earlier training of boys in the lower primary schools the interests of agriculture would be sufficiently served by compulsory instruction in elementary science (on the system already advocated through readers illustrated by object lessons) in view of the fact, noticed in a preceding paragraph of this resolution, that almost all instruction conveyed in rural schools through the medium of object lessons must acquire an agricultural colouring because the surrounding objects used for illustration are themselves connected with agriculture. In these opinions the Government of India is disposed to agree.

In most provinces, however, it was considered that 'agriculture' and 'sciences ancillary to agriculture' should be at least made *optional* subjects at a later stage in the school curriculum. Opinions differed as to the exact point in the school course at which these should be brought in and as to the character of the instructions to be given. But it was generally recognized that a distinction would have to be made between instruction designed for general educational purposes, and a course of study leading to an agricultural diploma or degree.

With these remarks the Government of India is content to leave the questions at issue to the decision of the local Governments and Administrations.

23. *II.—Readers and text books.*—The distinction accepted at the recent conferences between 'readers' and 'text books' was that while the former contain easy lessons on a variety of subjects, the latter deal exclusively with a particular subject or science. The agricultural conferences of 1890 and 1893 laid much stress on the necessity of simplifying both readers and text books. The defects pointed out in school books dealing with elementary science and agriculture were that the language employed was often above the comprehension of young boys; that the terms used were too technical; that the vernacular translation of English scientific words was frequently imperfect; that the subject matter was not seldom badly selected; and that the text books sometimes aimed at carrying the pupil further than was necessary for any practical purposes.

24. The Government India is pleased to observe from the proceedings of the recent conferences that a great deal has been done during recent years in almost all provinces to reduce these defects and that further attention is now to be given to the subject. The compilation of good readers and text books for the young in connection with agriculture and sciences ancillary to agriculture is a task of which the difficulty is not always appreciated. In England the best text books on such subjects have often been written by men of the highest scientific reputation. In some of the continental countries they are compiled and issued under the supervision of the central bureau of the Government. In India on the other hand, while there have been many useful books compiled for school use, no uniform policy has been adopted in their preparation, and there appears to be in consequence a considerable inequality in the character and value of both readers and text books in various provinces. Taking the case of agriculture, one primer on this subject has been compiled by a civilian, another by an agricultural expert, others have been based on these two books by educational officers, while others again have been independently compiled by non-officials. Evidence was given by a skilled witness at one conference that the current text books on agriculture and other such subjects are quite unsuited for young learners; that they are too abstruse; and that they deal with chemical problems and other matters beyond the comprehension of the pupils.

25. Uniformity in India is impossible. Any attempt at precise uniformity in teaching was deprecated by the Education Commission. The differences of language; of climate and physical condition; of the natural objects used for oral lessons, or as illustrations of school books; of local customs and practices; all these are insurmountable obstacles to uniformity of text in readers and primers required for educational purposes. But it may be doubted whether these variations need stand in the way of a general uniformity of plan and system.

26. It has been said that nothing requires a higher exercise of the intelligence than to serve up knowledge in a form in which it can be easily assimilated and digested by the young, and so far as this is the case, the compilation of school books demands the employment of the best intellects in the country for the work. The question indeed has been raised whether the scheme on which elementary readers and text books relating to agriculture and allied sciences are to be framed should not be worked out and revised from time to time by a competent committee of educational and other official experts who would, initially, deal only with the frame-work and general design of the educational books, leaving details to be filled in by provincial authorities, so as to suit the circumstances of each locality and who would subsequently offer criticisms on any defects which might present themselves to their notice in the completed books. The subject is however one which demands fuller consideration. At present the Government of India are content to record their opinion that readers and text books dealing with agriculture and allied sciences should not only be brought up to an equally high standard of arrangement, simplicity and clearness throughout India, but also that they should not fall in these respects below the best standards in Europe; that it would seem difficult to attain this object unless some of the very best men available in the country are allowed to devote for a certain period the whole of their time and attention to the subject; and that the matter is one of such grave importance in connection both with the interests of agriculture and with the sound education of the people as to deserve deliberate investigation.

27. *III.—Training Schools.*—The Conference of 1893 insisted on the necessity of providing teachers competent to give instruction in the elementary principles of agriculture. The conferences which have now been held go further. They demand that teachers should be trained to teach all elementary sciences on the system of 'readers and object lessons' and in many provinces lay stress on the impossibility of introducing the system unless school masters are specially trained in it themselves. That something has been done in this direction has been admitted, but that, taking India as a whole, progress has not been sufficiently great is clearly proved. One obstacle exists in the fact that the teachers in the lower classes of schools are so poorly paid that they cannot in many parts of India be compelled to go through a course in training schools; another that even in the case of those who do attend the training schools, it is not always easy to provide for them at those schools competent instructors in what is really a difficult branch of a schoolmaster's work.

28. The desirability of instructing schoolmasters how to teach by means of object lessons and readers has been acknowledged by local Governments and Administrations, to whom must be left the decision as to what practical measures can be taken to develop training schools in this direction. But apart from this general question there appeared to be, at more than one of the recent provincial conferences, a strong feeling in favour of requiring training school students, either before or after appointment as masters, to pass through a course on an agricultural farm. This measure had indeed been urged by the conference of 1893.

29. In Madras, where the subject has for some years been under discussion, it was proposed that training school students should go through a course under a competent agricultural master on experimental farms in the vicinity of training institutions The management of the farm would be in the hands of the agricultural department and the instruction of training school students in the hands of the educational department, who would utilise the agricultural farm and the experiments conducted on it for purposes of illustration. The Madras Government, while apprehending that a considerable time will be required to bring the scheme into operation, have accepted these views as sound. In the Central Provinces practical action has been taken in sending annually from each of the western districts four students or schoolmasters after they have passed through the training schools for a six months' course under an Educational officer at the agricultural farm in Nagpur. Strong evidence was given in this province that schoolmasters thus trained were the only efficient teachers of agricultural subjects and of cognate sciences in the schools. The extension of the system was strongly advocated by the revenue officials on the conference.

30. In the North-Western Provinces a few students go through a two years' course at a Government farm, some of whom are understood to be designed for schoolmasterships, and the Allahabad University has so far supported the movement in the interests of a supply of agricultural teachers as to allow a special examination in science and agriculture from those of the farm students who go up for the 'school trial' certificate. The students are not, however, as proposed in Madras and as is the case in the Central Provinces, trained by the educational but by the agricultural department, and the course is perhaps too long and the numbers too few to have any wide influence on the educational staff.

31. In Bombay, where special attention has been paid in the training schools to the practical instruction of teachers, one of the seven training schools is provided with an agricultural teacher who has obtained a College diploma, and it has been recommended by the Bombay conference that all the training schools should be similarly equipped. The question of using farms for the instruction of training school students was not raised at Bombay, but the principle has been accepted as regards training school teachers in the suggestion that the College diploma shall include a practical course on the Poona farm.

In Bengal the utilization of the Government farm for the purpose of training schoolmasters was recommended.

Thus there is a decided movement which has already taken some positive form in the direction of according to schoolmasters a practical training in agricultural subjects.

32. The Government of India recognize the undoubted utility of the policy advocated and accept the preliminary success obtained in the Central Provinces as *primâ facie* evidence of its practical results and feasibility. They invite all local Governments and Administrations to bring the question, where this has not already been done, under the serious consideration of their agricultural and educational departments, and to state, in forwarding the agricultural report of the year, what views they have formed on the subject.

33. *IV.—Higher agricultural education.*—The discussions on these subjects led to important conclusions. The Government of India have not hitherto pressed for the early establishment of high-class agricultural institutions in view of the fact that no sufficient evidence had yet been produced to show that students trained at them would find any satisfactory opening in life. They held too that high-class educational institutions professing to teach such subjects as agriculture, forestry, veterinary science, etc., should be national rather than provincial; that one or two national colleges would meet the present needs of all India; that the colleges, if founded at all, must be equipped with a highly competent staff of teachers; and that the reduplication of the expense in every province would not be justified. Following this view the 1890 conference, considered that the agricultural college already existing in the Madras presidency and a second to be attached to the Forest School at Dehra, would satisfy the needs of all India.

34. Dr. Voelcker recommended that special attention should be directed to agricultural education in colleges, but added that separate institutions would not be needed if existing colleges of science were expanded by the addition of an agricultural branch. The conference of 1893 did not formulate any specific recommendation, but agreed with the conference of 1890 'that the claims 'of men trained in scientific agriculture to appointments in the revenue and 'cognate departments should be as freely recognized as those of men trained in 'law, arts, and engineering.'

35. The question has now been put on a somewhat new footing by the argument urged in the three provinces of Madras, Bombay and Bengal, that a thorough and practical education in agriculture and allied sciences, ending in a high-class college diploma or in an agricultural degree, develops the intelligence of students just as well as a literary course; that it certainly fits them as well, if not better, for duties in the land revenue and cognate services; and that it is very desirable to encourage the appointment of men so trained. This policy has long been advocated by the Madras Government, who have recently carried it into practical effect by a Government order making the diploma in agriculture of the same value as a B.A. degree as a qualification for higher Government

service. It was further pointed out at the Madras conference that the proposed measure of passing all training school students through a practical course on a Government farm would require a staff of training school teachers instructed in the more advanced branches of agriculture; and that in recent years ten per cent. of the college sudents belonged to the land-owning class. The college was therefore needed—(1) for a large number of candidates for official employment, (2) for a certain number of training school teachers, and (3) for a material number of landowners.

36. It is evident that if the policy indicated is followed in other provinces there may be justification for a larger number of high-class agricultural colleges than the two advocated by the conference of 1890. The policy has been very strongly pressed in Bombay and is supported by the authorities there on similar grounds to those urged in Madras. 'We want,' it was written in a note submitted to the Bombay Government, 'as officials in the districts, rather 'than technical experts, men who have had their thoughts directed to agricul- 'ture and whose minds have been taught to dwell on it; whose reports on the 'state of the crops, the imminence of famine or the condition of the agricul- 'tural population will be animated by personal interest and intelligence of things 'agricultural; who, when endeavours are made to help the cultivating classes 'by a State loan, distribution of seed and so forth, or to stimulate them to 'adopt well-tried improvements, will have their zeal quickened by sympathy 'with and appreciation of the measures proposed.' The conferences in Berar and the Central Provinces followed the lead given in Bombay and suggested that students should be sent from those provinces to the Bombay College. The Bengal conference, adopting similar views, claimed that the province was justified in having a college of its own, and recommended that the engineering college at Seebpur, near Calcutta, should be expanded for the purpose. The conferences held in the Punjab and the North-Western Provinces endorsed the arguments put forward in Madras and Bombay, but were prepared to advocate the establishment of one college for the two Provinces. In Burma and Assam local conditions did not justify proposals for a high-class agricultural institution in either province, though it was admitted that students might occasionally be sent to one or other of the colleges elsewhere. Thus the outcome of the deliberations of the conferences has been that there should be four high-class agricultural colleges, *viz.*:—at Madras, at Bombay, at Calcutta, and at some place in Northern India. These four institutions would meet the ordinary requirements of Berar, the Central Provinces, and the Punjab, and the occasional needs of Burma and Assam. The opinions of local Governments on the question will be separately invited.

37. In every province which possesses or makes use of an agricultural college, there must it has been urged, be a special school course leading up to it. This has been provided in Madras and Bombay, and will doubtless be arranged for elsewhere when the time comes to do so. In Bombay the question has been raised of establishing an agricultural degree at the University, in addition to the College diploma, and was, when the conference closed, under the consideration of the authorities.

38 A subsidiary question was discussed at the conferences, whether in addition to the college there should be a school at which students should be trained for certain subordinate revenue appointments and for such posts as assistant managers on court of wards, estates, etc. School classes have already been established at the Government farms in Nagpur and Cawnpore with this object, the Nagpur farm being also utilized by the educational department for the instruction of training school students and schoolmasters. The period of the agricultural course is two years in both places, but the course for schoolmasters is at Nagpur only six months. In Bengal the conference suggested that there should be two courses of different lengths at the same college, the shorter for subordinate officials, the longer for those who aspired to the College diploma. The question is one which requires further consideration and which would be perhaps more satisfactorily worked out by inter-communication, with the consent of local Governments, between the educational and agricultural departments of the provinces concerned, and by a review of the results which have been obtained at Nagpur and Cawnpore.

39. The local Governments and Administrations in their reviews of the conference proceedings have generally agreed in the policy put forward—and the Government of India are themselves prepared to give it every encouragement. But they look upon this, as on all other approved recommendations of the conferences, as only a part of a general working-plan which must be developed as circumstances, admit. For the present they are content to place upon record the conclusions which they consider to be justified by the discussions which have been held :—

(1) that agricultural degrees, diplomas or certificates should be placed on the same footing as corresponding literary or science degrees, etc., in qualifying for admission to Government appointments, and more particularly those connected with land-revenue administration ;

(2) that there should be not more than four institutions giving a high class diploma, *viz.*, at Madras, Calcutta, Bombay and some place in the North-Western Provinces, and that these should be utilized by other provinces ;

(3) that the diploma should eventually be compulsory in the case of certain appointments, *e g.*, agricultural teachers at training schools, assistants to the director of agriculture, etc. ;

(4) that the practical instruction of candidates for certain subordinate appointments at a school class or an experimental farm should be further considered ;

(5) that a special school course leading up to the agricultural diploma degree or certificate, is required ;

(6) that the practice of allowing school masters either before or after appointment to pass through a course of a few months on a Government farm is one which deserves consideration.

Extract from the Proceedings of the Government of India in the Department of Revenue and Agriculture,—(No. 19—98-1, dated Simla, 20th September 1895.)

READ—

Paragraph 25 of Government of India, Home Department Resolution, No. 199, dated 18th June 1888, on the Review of Education in India in 1886.
Proceedings of the fifth meeting of the Agricultural Conference held at Simla in October 1893.
Paragraphs 527 and 528 of Dr. Voelcker's Report on the improvement of Indian Agriculture.
Paragraph 17 of Government of India, Home Department Resolution, No. 2, dated 7th September 1894, on the Progress of Education, 1887-88 to 1891-92.

RESOLUTION.

In paragraph 17 of the second Resolution mentioned in the preamble, allusion was made to the suggestions of Dr. Voelcker respecting the education of the agricultural classes. The subject has now to receive renewed attention in connection with the recommendations of the agricultural conference which was convened in October 1893 to consider Dr. Voelcker's Report.

2. The general view taken by the Government of India in the Resolution of 1894 was that greater success is to be expected from making instruction in the rudiments of agriculture part and parcel of the primary system of instruction in the country, than from teaching it as a subject apart from the general educational programme, and that such general enlightenment and intellectual expansion of the agricultural classes as would enable them to perceive for themselves the small reforms which are within their means and opportunities, would be more likely to produce substantial results than special instruction in particular agricultural processes. This view is in practical accord with the opinions expressed by the delegates of Local Governments and Administrations at the Conference of 1893. In their second Resolution they recommend that as a general rule instruction in agriculture should be combined with the existing course of education and not depend on separate special institutions.

3. The principles which govern the introduction of agricultural instruction into the educational system apply also to all branches of technical instruction. The question, therefore, is not merely how to adapt education to the training of agriculturists, but how so to fashion the plan of instruction as to promote in the pupils taught the power of assimilating easily any kind of technical instruction. The moulding of the educational scheme into a form which will lead to such a result is one on which ideas and methods have during recent years undergone a radical change in all of the more advanced countries of Europe. One great feature in the change has been the substitution of the idea of development of faculty for that of mere acquisition of knowledge. It is now acknowledged that the hand and the eye should be trained; that the powers of observation should be brought into play and improved by exercise, and that the actual teaching of a particular trade is of less importance, in the first instance, than educational methods which will adapt the pupil for the subsequent reception of technical instruction of any description. "A system of education," writes the late Professor Huxley, "which does nothing for the faculties of observation, which trains neither the eye nor the hand and is compatible with utter ignorance of the commonest natural truths, may naturally be regarded as strangely imperfect." All technical instruction must indeed be founded on a preliminary training of a practical character in primary and secondary schools. In the reports recently submitted from various counties in England on the results achieved at technical institutions a common cause of failure was found to be the absence of any training of the powers of observation in the schools of lower grades. On similar grounds a charge was laid against the educational system formerly prevailing in the rural schools of England that it "actually unfitted the children of farmers for an agricultural career." "Nevertheless," wrote the author of the second Report published by the Royal Commission on technical instruction, 'there need be nothing in any scheme of rural education specially designed for the agricultural classes which should unfit the children for any other career for which individually they may be better suited." The Government of India hold the same view. They admit indeed that agriculture, as the mainstay of the prosperity and wealth of the greater part of the population of India, deserves, more than any trade or profession, the special attention and care of those who are responsible for the instruction of the rural classes; but they are convinced that the early school instruction which is most calculated to produce eventually the best agriculturists will be equally useful to those who intend to follow any other occupation.

4. At the same time the circumstances and surroundings of rural schools must give to any educational plan based on the principles already indicated a leaning towards agriculture. In the official syllabus for rural schools in France it is laid down that "teachers should commence by directing the attention of pupils to visible and tangible objects which they should make the children see and feel, and then put them face to face with concrete realities, from an intelligent comprehension of which they will be led, by a gradual exercise of their reasoning faculties, to the formation of abstract ideas." And in the Report of the Royal Commission already quoted it is urged that "rural education should be based on what a child can see round him." The view recorded in the

proceedings of the Conference of 1893, that any system of practical education in rural schools must, for whatever class intended, acquire an agricultural colouring, because the surrounding objects are themselves agricultural seems therefore to be unexceptionable.

5 In the Resolution of 1894 on Educational Progress the Government of India have acknowledged that there is a general tendency to modify the course of primary instruction in the desired direction In some Provinces material progress has been made. But they are not fully aware how far the principles advocated have been systematically adopted, or to what extent opportunities exist for their wider introduction. Nor have they been informed what action, if any, has been taken on the suggestion in the 25th paragraph of the Resolution of 18th June 1888 that conference should be held with which the Agricultural Department should be associated for the purpose of discussing the educational systems in its bearings on agriculture It is true that the questions under examination have not so far as the agricultural classes are concerned, yet assumed the general importance, which they will possess in the future, in view of the fact that as a rule the rural population actually engaged in tillage have not hitherto made any appreciable use of the rural schools, otherwise than with the object of training their children for occupations which have no immediate connection with agriculture. But the time must soon come when this position will be changed. Serious discussion of the subject ought not to be longer postponed.

6 The Governor General in Council desires therefore that the suggestion of the Resolution of 18th June 1888 should now be carried out, and that advantage should be taken of the visit of the officer deputed by the Government of India to discuss the proposals of the Agricultural Conference of 1893 to hold in each Province a Conference of such officials as the Local Government may appoint, including, it is suggested, representatives of the Educational and Agricultural Departments, for a formal examination of the Resolutions recorded at the fifth meeting of the Conference of 1893 with the view of submitting definite suggestions and proposals for the consideration of the Local Government or Administration

7. The Government of India do not wish, until Local Governments and Administrations have had the opportunity of recording their own views, to deal further with the specific proposals of the Conference, nor do they desire to authorize the officer deputed by them to convey any final judgment on the issues raised. The chief duty of that officer will be to place for their information before the Local Governments or their representatives either facts and statistics obtained in other provinces, or the reports of other Provincial Conferences For the present a sufficient indication has been given of the general views of the Government of India and of the desire of the Governor-General in Council that the subject should be earnestly examined in the interests of future agricultural development.

SEVENTH RESOLUTION.

Publication of agriculutral information.

The despatch of Her Majesty's Secretary of State directing in 1881 the formation of departments of agriculture, stated that one of their main objects was to be 'the rendering available of facts and statistics in order that Government and its officers may always be in possession of an adequate knowledge of the condition of the country, its population, and its resources.' This injunction must be held to include the publication in an easily accessible form of all information likely to be useful to the general public. No. 55, dated 16th June 1881.

2. The various agencies established or contemplated by which information, facts and statistics are or will be collected have already been described. They have been brought under three main divisions—(i) Land-record establishments, (ii) Scientific departments under imperial direction; and (iii) Provincial departments of agriculture and their experts. The duties in respect to collecting and publishing information which devolve in each case upon the provincial and imperial departments, respectively, will now be considered.

I.—Information derived from land-records.

3. Information supplied by the land-records and by the establishment which maintain them can be 'rendered available' in three ways:

Firstly, by the arrangement of the records themselves in such form that they can be easily searched by district officials and be made to yield readily information of any kind that is required. This has been or now will be effected in every province in which village records are maintained. The system accepted at the recent conferences for providing a simple abstract of the facts and statistics for each village, which will at once indicate its progress or decline, has already been described in the third resolution of this series. And the whole scheme of land-records has now been so arranged in every part of India which possesses land-record establishments that information is promptly conveyed to the authorities of injury or distress caused by sudden calamities.

Secondly, by the collation and review of the statistics for each district and division for the province, and for the whole empire. This duty is respectively performed for the province in the annual or periodical reports of district and divisional officers, in the review of them by the land-record department, by the higher revenue authorities, and by the local Governments; and for the empire by the compilation and discussion of them in the statistical department of the Government of India, by which department they are published for the information of the general public, of the home authorities, and of Parliament.

Thirdly, by the collection and collation of special facts and statistics under appropriate subject heads. The method which is advised of arranging information under subject heads, with a view to its eventual publication in an intelligible form, will now be described.

4. The system may be most conveniently described as a system of 'ledgering', and is an essential duty of the departments of land-records and agriculture. In every departmental office arrangements should be made for the separation of pamphlets, extracts, letters, reports, etc., referring to each subject which is of sufficient importance to deserve a distinct heading, in such a manner that all papers relating to that subject may be brought together for convenient reference. If this principle is observed the details may be left to the discretion of the departmental officers. But as the system is one which has been successfully elaborated in the office of the Reporter on Economic Products that official has been instructed to publish a brief description of it for general information.

5. The Government of India have already indicated in the third resolution of this series how the land-records and the land-record establishments can be utilised for supplying facts and statistics in respect to any agricultural practices or conditions which may be the subject of enquiry—such as methods

of cultivation, the diseases of agricultural plants and of cattle, and so forth. Information thus directly solicited would be naturally ledgered under its appropriate head and published, if necessary, by the department or supplied to the scientific department which requires to utilise it.

6 Beyond the information thus specially sought for there are many facts and statistics which are brought to the notice of district officers in their inspection of the records or otherwise, which are of sufficient interest to deserve compilation and perhaps eventual publication by a central office. Thus in the abstracts (to which allusion has already been made) of village statistics, the occurrence of various agricultural defects in particular localities may be brought to light. In one group of villages it may be the prevalence of a noxious weed, in another the continual recurrence of a plant disease, in a third the spread of saline efflorescence, in a fourth the appearance of an obscure cattle murrain. Some system should now be established under which district officers should be encouraged to communicate to the department of land-records notes of any remarkable facts bearing on agricultural conditions which may come to their notice through the village abstracts. It would probably suffice that an order should be given by the district officer directing that a copy of any entry in the circle books recording the occurrence and cause of any serious deterioration affecting a group of villages or an agricultural tract should be sent to the office of the Department of Agriculture.

7. It will be presently explained that the system of 'ledgering' advocated will not require that any facts and statistics thus supplied need be immediately utilised by the central department of the province. It will suffice that they should be recorded in their proper place, until the time comes when the subject to which they relate is brought under special examination. Information thus collected will, when eventually collated and reviewed, be of material use in providing that 'adequate knowledge of the condition of the country' which Her Majesty's Secretary of State called upon agricultural departments to supply.

II.—Information published by scientific departments under imperial control.

8. The second agency by which information is collated and published includes the scientific departments directed by the Government of India. Some of these are independent of provincial aid, their publications being regulated by the heads of the departments in communication with the imperial Government.

9. In every branch of work progress in executive operations is published in annual reports. But other information of more general interest is published in special reports, the character of which will now be briefly described.

In the *Survey* Department the maps and charts that are issued at the head-office practically embody the greater part of the geographical information secured by Survey operations.

The *Geological* Department publishes special memoirs containing a detailed account of the results of any important investigation made by its officers, and exhibits its collections for the inspection of the public in the Indian Museum at Calcutta. An annual review of the mineral products of India for the information of those interested in mining enterprise and others is published annually at the request of Parliament, and is edited by the reporter on economic products.

The *Meteorological* Department is one on which the obligation to provide full and ample information for the use of officials and of the public was strongly urged by the Famine Commissioners. The measures taken, under the direction of the Government of India to fulfil this object have been already indicated in the fourth resolution of this series. By daily maps and weather reports, telegraphed and posted to all parts of India, by storm warnings, by weekly and monthly reviews, annual reports on weather published in the official gazettes, and by special memoirs on storms, tides, and rainfall, the meteorological department has given full effect to the policy which has been pressed upon it.

The *botanical* Survey of India has recently commenced the issue of a series of 'records', edited by the director, in which are embodied the results of the tours and investigations of the botanical officers throughout India. Special monographs are also published by the director under the title of 'Annals of the Botanic Garden,' while the herbaria at the head-quarters of

each officer are open to the inspection of the public. The botanical officers are further required to communicate to the reporter on economic products for eventual publication by him any facts of interest which their investigations may bring to light in connection with plants of economic value.

Economic products have, since the Imperial Department of Revenue and Agriculture was created in 1881, constituted the largest field in which organised measures for collating and publishing information have been taken by the Government of India. In no department of science is information more required by the commercial and general public as well as by officials engaged in administrative work. As already explained in the fourth resolution of this series a descriptive catalogue under the title of a dictionary of economic products has been prepared and published by Dr. George Watt, the official reporter, its compilation having occupied ten years. But the dictionary was only designed to bring together facts and statistics already recorded in some form in books, reports and journals, or in the manuscript papers of Government offices. The still more important work of collecting and collating new information has now been commenced, with a view to its ultimate incorporation in a revised edition of the dictionary, as well as to the current publication of so much of it as may be of immediate interest.

10. A scheme has been drawn up under which the current work is divided into three branches:—

(1) The compilation of 'handbooks', which are practically revised 'dictionary' articles, relating to a limited number of economic products, about twenty, of which collections are annually sent to the Imperial Institute. The handbooks are designed for circulation and sale in England and other countries, as well as in India.

(2) The issue of a series, designated 'the Agricultural Ledger,' of pamphlets containing any information of interest communicated to the official editor (the reporter on economic products) by any of the scientific or provincial departments. This series covers more ground than is occupied by economic products including as it does notes on any subject connected with agriculture; but economic products, under which head are comprised all field and garden crops and all forest produce, occupy the largest space in the publication. The agricultural ledger is intended for circulation to all officials interested in the subjects dealt with, as well as for distribution to the public.

(3) The collection by the reporter of extracts from journals, from settlement reports, and other such sources of information, as well as of notes communicated from time to time by private or official contributors. These are ledgered in the reporter's office on a system which brings together all papers referring to the same subject in such manner that the information they contain can be readily utilised, and if necessary condensed, whenever the subject may be eventually dealt with, whether in a handbook, a number of the ledger series, or finally in a dictionary article. At the same time any matter of immediate interest to the commercial public is communicated in special circulars to those concerned in anticipation of more formal publication.

11. The heads of all departments, provincial and imperial, have already been invited to bring to the notice of the official editor any passages in reports and publications connected with their work which deserve to be brought to his notice for inclusion in his office ledgers or for communication to the public. The Government of India take the present opportunity to direct continuous attention to this useful practice, which tends to the preservation in an accessible form of much valuable information, which would be lost sight of in the pages of reports on current administration or of other blue books which are relegated to the shelves of official record-rooms, and seldom again consulted.

12. In the *Veterinary* Department a system of ledgering similar to that employed in the economic product department is adopted. When sufficient information of interest on any subject connected with cattle, horses, animal disease, etc., has been collected by the special officer who, as stated in the

fourth resolution, is charged with this duty, it is communicated in the form of a number of the agricultural ledger series for publication by the official editor.

The *Bacteriological* branch of the department publishes the results of its investigation in a series of special memoirs, which are issued whenever sufficient matter is available for publication. In some cases these would be communicated to the agricultural ledger.

Information collected in the department of *Agricultural Science* is communicated in the manner already explained to the official editor of the agricultural ledger for issue in that series.

In the section of *Agricultural Entomology* memoirs are issued from the Indian Museum by the officer on the staff engaged in investigations in that field. The information collected by him is also made available for publication in the agricultural ledger series.

General information about *Forestry* is conveyed to the public in an annual review published by the Inspector-General of Forests, while any detailed facts and statistics of interest are published in the agricultural ledger series. A useful periodical entitled the 'Indian Forester,' to which Forest officers are the chief contributors, is utilized by the Department for conveying interesting information to the official and general public.

In the department of general *Statistics* periodical reports, reviewing the statistics received from all provinces and departments, will now be published periodically by the Director-General of the newly-constituted department. These comprise, among others, monthly, quarterly and annual reports on exports and imports, on inland road, rail and river-borne traffic and crop forecasts and outturns. One of the most important publications is an annual return of the agricultural statistics of British India presented to Parliament.

Independently of the new statistical department, the imperial department of agriculture undertakes the publication, periodically revised, of a *statistical atlas* in which the circumstances and resources of the empire are illustrated by maps, statistical diagrams, and brief descriptive essays contributed by directors of scientific departments or by other selected officials. The second edition of this work has recently been published.

Art and *Industries*, though not represented by any separate imperial department, have not, in the scheme of publication, been overlooked. An illustrated journal of Indian art to which all officials and others interested in the subject in India or in Europe are invited to contribute, was, in the year 1888, brought out at the instance and with the aid of the imperial Department of Revenue and Agriculture by a well-known London art publisher and is issued monthly. A 'technical art series' containing illustrations of Indian art and architecture is also published by the officer in charge of the Photographic section of the Imperial survey office. Both of the above publications are partly designed for educational purposes as well as for preserving a knowledge of the best art of the country. A third series, designated 'drawing examples' and also published by the Survey Department, contains a special selection of oriental art drawings for use in schools.

III.—Information published by Provincial Departments.

13. The third agency upon which the duty devolves of publishing information, facts and statistics on agricultural and scientific subjects otherwise than in connection with land-records, comprises the agricultural departments of the provinces and experts under their control.

14. The system of 'agricultural ledgers' adopted by the Government of India was taken from Madras, in which Presidency for some years the practice of issuing 'agricultural bulletins' had been established. There are many subjects of provincial importance which are too dependent on local conditions and circumstances, to be of useful interest to other provinces or to the general public. The maintenance of a provincial as well as of an imperial series of publications is, therefore, most desirable, and some other provinces have now followed the example of Madras, and the Government of India would be glad to see the practice adopted in every province.

15. Those papers in a provincial series which are of general interest outside the province are, under a scheme for provincial co-operation recently circulated,

to be communicated to the editor of the imperial series for wider circulation, and in this view the pamphlets of both provincial and imperial publications are to be of the same pattern.

16. The Government of India cannot press too strongly upon local Governments and Administrations the desirability of encouraging the directors of agricultural departments to provide for the free and constant contribution of useful information to the imperial editor. As explained under the previous sections such information may be of two kinds, either for immediate publication in the imperial series, or for inclusion in the ledgers of the editorial office. With this object the agricultural department should, subject to the instructions of the Local Government, devise a system under which, as in the imperial departments, all passages in official papers and reports, of which the preservation for future publication may be desirable, should be marked and brought to their notice. To no class of reports do these remarks refer more particularly than to settlement and land administration reports. Much of the interesting information on agricultural subjects contained in them is lost to future generations of officials unless promptly extracted and ledgered under appropriate heads. A schedule of the headings which should be adopted for this purpose has been elaborated in consultation with provincial authorities and is now in force throughout India.

17. There is another class of facts and statistics in which the Agricultural Department is essentially interested and which especially demand a careful system of ledgering, *viz.*, the results of experiments on Government farms or of investigations into agricultural practices and conditions. These, which are often of a technical character and of interest only to those actually engaged in agricultural experiment, do not always come within the scope of the agricultural ledger series or of the provincial bulletins. But papers on each subject, intelligently ledgered, may, as previously suggested by the Government of India, be usefully communicated direct by one provincial department to another, and may, whenever of general interest, be published in the provincial bulletins or communicated for inclusion in the ledgers of the imperial editor.

Every provincial department must at least be required to include in the information thus communicated to other departments—

(1) a statement of the working plan arranged in consultation with the agricultural chemist for every experimental farm and of the progress made in carrying it out each year in order that the officials of the agricultural department in each province may be kept punctually informed of the experiments, their objects and results which are being carried out in all other provinces;

(2) a statement each year of the agricultural defect or defects which have been made the subject of special enquiry during the past 12 months and a report on the progress and results of the investigation;

(3) any remarkable facts which may at any time come to the notice of the department, and which are likely to be of interest to the agricultural departments of other provinces.

18. In the Bombay Presidency the system has been followed of publishing a statistical atlas, on the plan of the imperial atlas, in which the conditions and circumstances of each district are illustrated by maps and statistical diagrams, and the measure is recommended by the Government of India for general adoption. Such atlases are of use and interest to the general public as well as to the administration.

19. The main principle which the Government of India conceive it necessary to bear in mind in the development of the scheme for recording facts and statistics is that the record of them in general reports dealing with a variety of subjects is of little or no practical use, unless those which are of interest are at once seized upon and preserved in ledgers under intelligent direction. The principle was accepted by the agricultural conference of 1893, and the Government of India trust that it may now, as far as possible, be carried into effective practice on a well-organised system by the departments of land-record and agriculture in every province in which action has not yet been taken to this end.

EIGHTH RESOLUTION.

Annual Reports.

1. One of the subjects which was brought before the agricultural conference of 1893 was the form which should be adopted for the annual reports prepared by provincial agricultural departments. It was, however, decided that the question could best be dealt with when the agricultural programme, which was to be based upon the proceedings of the conference, had been definitely determined. The scheme which is to be worked out by provincial departments has now been finally settled in communication with local authorities and governments and is embodied in the preceding resolutions of this series. The annual reports should, in the opinion of the Government of India, follow, as far as possible, the arrangement which has been observed in those resolutions.

2. The Government of India last dealt with the subject of departmental reports in the 3rd paragraph of their Resolution No. 52, dated 14th September 1887, and do not require that any material departure should be made in future from the instructions which it conveyed and which had for their object the curtailment of annual reports. The paragraph referred to is quoted below for purposes of easy reference :—

Paragraph 3 of Resolution No. 52, dated 14th September 1887.

3. *Report of the Department of Land Records and Agriculture.*—The annual publication in every Province of the Report of the Department of Land Records and Agriculture in the form prescribed in Circular Resolution No. 54 A., dated the 28th April 1884, is, in the opinion of His Excellency in Council, essential for the purpose of indicating the progress which may be annually made by the Department of Land Records and Agriculture in connection with the measures adopted in pursuance of the recommendation of the Famine Commissioners in each portion of the Empire. The report consists of two main divisions—Land Records and Agriculture—and is designed to show the executive work of the Department, not to comprise discussions on administrative measures, or to contain any description or summary of the economic or agricultural circumstances of the season. The Local Government may, however, require information of this kind to be submitted by the Department to the Chief Revenue authorities of the Province, for utilization in preparing the Land Revenue Administration Report, and may prefer that for that purpose it should be included in the land record section of the Departmental Report, rather than be submitted by independent communication. There will be no objection to this course. But there seems to be no reason why statistical statements concerning crops, irrigation, tenures, etc., should find a place in the Report of the Department as well as in the Annual Land Revenue Administration Report, to which latter they should, in the opinion of His Excellency in Council, be confined. The Agricultural section of the Departmental report should be restricted to an account of the executive operations of the Departmental officers, and to a brief description of, or reference to, any results of special interest which may have been obtained during the preceding twelve months, whether in farms, gardens, Government estates, or otherwise, but should avoid lengthy discussions on agricultural subjects and need not contain any detailed examination of the working of gardens, farms, or other agricultural institutions, which should be dealt with in the Department by orders on the annual reports. In accordance with the above remarks, His Excellency in Council is of opinion that no other review of the Annual Report of the Director of the Department of Land Records and Agriculture than that which may be included in the review by the Local Government of the Land Revenue Administration Report is necessary; and that it will suffice if a copy of the Report, together with any orders which may be passed thereon, is submitted for the information of the Government of India.

3. The question which remains for consideration is the arrangement which should be followed in framing an account of the executive operations of the Department. In Circular No. 54 A., dated 28th April 1884, headings had been prescribed which were based upon the agricultural programme embodied in the Resolution of 1881 dealing with the duties of agricultural departments. These will hereafter be replaced by headings corresponding with the subjects dealt with in the Resolutions which are now issued in supersession of the Resolution of 1881.

4. The first Resolution of the new series is prefatory and requires no notice in the annual report. But it will be desirable that the annual report should commence with a prefatory chapter in which will be recorded among other matters a brief notice, any changes which may have occurred in the personnel of the Department, and a short description of the tours taken by the Director and of their [illegible]

5. The second Resolution deals with the measures taken to improve land record establishments. The work of the department in connection with land records is in most provinces described in a separate report which is incorporated with the land revenue administration report of the year. The Government of India have no wish to interfere with this procedure which is doubtless the most convenient to all branches of the administration concerned. But they desire that the annual report of the department should contain a brief notice of the progress made in efficiency and knowledge of survey the land record establishments; of any new measures which have been taken during the year to improve the standard of the land record officers; of the extent to which promotion has been granted to the higher revenue service; and of any other circumstances of a general character which may indicate that the gradual improvement of the land record staff is held in view.

6. The third Resolution deals with the utilization of the land records. Under this head should be described the general working of the system prescribed for the maintenance and inspection of circle note books; it should be explained whether as a rule they are punctually maintained and intelligently examined by district officials, and some general indication should also be given of the use made of the land record staff to supply information on agricultural questions under enquiry in accordance with the instructions of Resolution V or otherwise.

7. The fourth Resolution deals with the scheme of scientific enquiry carried out by imperial departments. Under this head the report should state to what extent during the course of the year the provincial department has lent its co-operation to, or made use of, any one of the imperial departments named in the Resolution, and should describe any work done in the province, whether with or without the aid and advice of the imperial officers, in any of the fields of scientific enquiry to which the Resolution refers. The progress made in Civil Veterinary work should, in accordance with the instructions of paragraph 13 of May the Resolution marginally quoted, be especially described under the various heads detailed in that Resolution.

8. The fifth Resolution refers to positive agricultural experiment and improvement. As stated in the orders of 1884 already quoted in the second paragraph, it is not desirable that the annual report should enter into any lengthy discussions on agricultural subjects or describe the working of the farms. The separate reports on the farms themselves, which are submitted to the local Government as well as the notes on any interesting experiment or improvement which the Department is required to communicate to the editor of the agricultural ledger will supply detailed information to all who may require it. The annual report is only intended to indicate the general character of the programme which the Department is carrying out. The section of it which deals with the subjects of the fifth Resolution should therefore open with a conspectus of the farms which are under the control of the Department and of the staff by which they are managed; it should indicate the system, if any, which is adopted for carrying experiments into estates under Government or private management, and for obtaining the co-operation of native landowners. It should then give a brief description of or reference to any results of special and material interest which have been obtained on farms or estates during the preceding twelve months. It should next explain what particular agricultural defects have been made the subject of special investigation during the year, and if a report on the results of such investigation has been already published in the agricultural ledger, should refer to the number and date of the journal in which it has appeared, such reference obviating the necessity of giving any special account of it in the annual report. Finally, it may include a record of any interesting facts which have been otherwise brought to light during the year in connection with agricultural enquiry and improvement, although in these cases also a reference to the agricultural ledger ought to prevent the necessity of anything more than a brief allusion to them.

9. The sixth Resolution deals with agricultural education. Under this head should be included a statement by the Director for the information of the local Government how far the educational system of the province is found to meet the requirements necessary for the instruction of boys or students designed

and to what extent that system is or should in his opinion be supplemented by special departmental arrangements and educational classes.

In dealing with agricultural education he should, as far as possible, follow the arrangement adopted in the resolution on that subject and bring his remarks under the various heads there given.

10. The seventh Resolution deals with the publication of information, facts and statistics. Under this head the following points should be noticed in the annual report:—

(1) The extent to which information has been obtained from the district circle note books of the occurrence and cause of serious agricultural deterioration. This may be illustrated by a record of the number of communications received.

(2) The system maintained for ledgering useful facts and information from district and settlement reports, from the reports of the scientific departments or from similar sources of information, and the general progress which has been made or the difficulties which are found in the ledger work.

(3) The publication, or measures, if any, taken for the preparation of a statistical atlas, or of any other special works designed either to illustrate the agricultural or economic conditions of the province, or of any part of it, or to indicate the position and needs of any agricultural or commercial industry.

(4) The number of papers communicated by or through the agency of the Department to the Agricultural Ledger. A list of these should be given in an appendix to the Report.

(5) The number of papers received from or communicated to other provincial departments.

11. In conclusion, it is left to the discretion of the Director, under such instructions as he may receive from the local Government, to bring forward any matter of interest which has been brought to his notice during the year and which bears upon the work of his department.

12. Under the instructions of this Resolution the headings of the chapters of the Director's report will be—

I. Prefatory.
II. Land Records Establishments.
III. Utilization of land records.
IV. Scientific and national enquiry under imperial control.
V. Scientific and local enquiry under provincial direction.
VI. Agricultural education.
VII. Publication of agricultural information.
VIII. Final.

J. E. O'CONOR,
Director-General of Statistics.

T. W. HOLDERNESS,
Deputy Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, March 6th, 1897.

During the week under review pressure has been exceedingly unsteady throughout the Indian area, and the barometric changes from day to day, more particularly in North-West India and Baluchistan, have been very large. These rapid changes of pressure have been accompanied with strong, squally, winds over a large part of the country, and duststorms were reported at several stations, but there has been a remarkable absence of rain throughout the week, the only recorded falls of any importance having been some showers, varying between half an inch and three inches which fell at a few places in Bengal and Assam on the morning of the 6th at which time strong south-westerly winds were blowing at the head of the Bay. The mean temperature was lower than usual over the greater part of the country on the first two days, but after the 1st March, the abnormal deficiency gradually disappeared and at the close of the week the heat was very generally excessive.

Daily Summary—*Sunday, 28th February.*—The pressure changes were unimportant except in Baluchistan and the Indus Valley where the barometer had fallen rapidly and a shallow depression had appeared. Readings were highest over Rajputana. The winds were cyclonic, and strong in places, over North-West India, but were fairly normal elsewhere. The heat was excessive over Burma and the east, south and centre of the Peninsula, but was less than usual elsewhere—more particularly over Rajputana and the Gangetic Plain. Maximum temperatures exceeding 100° were reported from the stations in the Madras Deccan, of which the highest was 105°·2 at Cuddapah. No rain had been received at any of the reporting stations.

Monday, 1st March.—The shallow depression, noticed over Sind on the previous day, had moved north-north-eastward and lay over the Southern Punjab. Within the depression area the barometer was falling slightly, but in all other places a recovery was in progress, which in Baluchistan and Upper Sind had been rapid. Cyclonic winds, moderate to fresh in force, were reported near the depression, but elsewhere the wind directions were variable. The mean temperature had decreased over Burma and Madras, and the areas of excessive heat were less marked than on the preceding day. At the same time temperature had increased elsewhere, and the relative coolness over Rajputana and the Gangetic Plain was disappearing. The highest maximum reported was 102°·7 at Cuddapah. The weather was fine and dry everywhere.

Tuesday, 2nd March.—The depression noticed over the Punjab on the 1st had filled up; the barometer had risen almost everywhere—very rapidly in the north-west—and a large high pressure area had been developed over North-West India. Out from this area strong winds were blowing in all directions, and the air had become rapidly drier over Baluchistan, Sind and Gujarat. The variations of the mean temperature from the normal were smaller and more irregular than of late, though the highest temperatures and the greatest abnormal excess continued to be reported from the interior of the Peninsula. The highest maximum reported was 102°·7 at Kurnool, a light shower of rain had been received at Khushab and Sialkot.

Wednesday, 3rd March.—The barometer was falling almost everywhere—most so in the north of the Punjab. The high pressure area in the north-west was, however, still shown, and the winds still exhibited a general outflow from this area. The mean temperature had fallen quickly over Sind and Rajputana, and was lower than usual in that area, but elsewhere the heat was excessive and Kurnool reported a maximum of 101°·2. The air had become drier and there was no rainfall throughout India.

Thursday, 4th March.—The barometer was still falling everywhere. Readings were lowest along the foot of the Himalayas and high along the Sind and Kathiawar coasts and over Tenasserim, the high pressure area over North-West India having disappeared. Westerly winds were blowing down the Gangetic Valley and northerly winds along the West coast, but elsewhere the directions were variable and at the head of the Bay apparently indicated cyclonic movements. The force was fresh to strong in parts of North-West India. The mean temperature exceeded the normal very generally, but the variations were on the whole small. The highest maximum recorded was 102°·7 at Kurnool. Snow had fallen slightly in Kashmir, but there was no rain over India.

Friday, 5th March.—The barometer had risen over North-West and North-East India and fallen elsewhere. Readings were lowest over Bihar and were high over North-West India, the west and south of the Peninsula and Burma. The winds were northerly and north-westerly over Western and southerly and south-easterly over Eastern India, while the force was light or moderate except in Southern Rajputana, North Bombay and the north of the Bay, where the wind blew freshly. The mean temperature was very generally excessive—most so in Central India. At the Deccan stations the maxima continued to vary between 103° and 104°. Thunderstorms had given light local showers of hail and rain to Silchar, Dehra Dun, Ranikhet, Chakrata, Mussooree, Simla and Srinagar.

Saturday, 6th March.—The barometer had recovered over the greater part of India, but a fresh and rapid barometric fall was approaching through Baluchistan. A shoulder of relatively high pressure existed over North Bombay, Rajputana and the central parts of the country, while slight low pressure areas were shown over the Indus Valley, on the one hand, and over Bengal on the other. The winds were generally little changed, but at the head of the Bay a strong south-westerly to southerly wind was blowing. The heat was less than usual at several central stations and at some places in Lower Burma, but elsewhere it was excessive. The highest maximum reported was 105°·7 at Cuddapah. Scattered showers were reported at some north-eastern stations, of which the most important were 1·61″ at Bogra, 1·00″ at Mymensingh and 0·57″ at Silchar.

Temperature.—The week was marked by a gradual increase of temperature both absolutely and relatively to the normal. Thus on the 28th of February and 1st of March the heat was excessive only in Burma and Madras, and the mean temperature of the whole country was 2°·1 and 1°·1 respectively below the normal, but on the 2nd, the Punjab was the only province which exhibited any deficiency, and from that day onward to the close of the week, the mean temperature was (except in Sind, Rajputana, Gujarat and Central India on the 3rd) in excess practically in all parts of the country. The following table gives variation data, for temperature for the week :—

Provinces.	Feby. 1897	March 1897						Mean variation of week.
	28th.	1st.	2nd.	3rd.	4th.	5th.	6th.	
Burma	+1·4	+0·5	+1·1	+1·0	+1·2	+1·6	+1·1	+1·1
Bengal and Assam	−1·9	−1·0	+0·7	+2·3	+1·5	+2·9	+4·0	+1·2
North-Western Provinces and Oudh	−5·4	−3·5	+1·0	+2·3	+1·9	+3·2	+1·2	+0·1
Punjab	−2·9	−0·3	−0·6	+1·4	+1·5	+1·5	+1·5	+0·3
Bombay	−2·1	−1·2	+0·8	+1·9	+1·7	+2·0	+1·1	+0·6
Central Provinces and Berar	−2·2	−1·7	+1·6	+1·0	−0·8	+3·1	+0·2	+0·2
Central India and Gujarat	−5·3	−3·0	+0·5	−2·0	+1·1	+4·6	+0·1	−0·6
Sind and Rajputana	−4·4	−2·2	+0·5	−4·8	+1·3	+1·9	−0·4	−1·2
Madras	+3·8	+2·5	+1·2	+0·7	+1·3	+2·3	+3·5	+2·2
Mean for whole of India	−2·1	−1·1	+0·8	+0·4	+1·2	+2·6	+1·4	+0·4

In the Deccan and Berar maximum temperatures, exceeding 100°, were recorded on each day, but during the week under review, readings exceeding 100°, were not recorded outside this area.

Rainfall:—As stated above the rainfall of the week under review was light and restricted to parts of North-East and of North-West India. In the north-west the fall of rain occurred as scattered showers on different days during the week, and was due to the effect of duststorms and thunderstorms accompanying the rapid changes of pressure noticed above. In most cases these falls of rain were light and unimportant and the divisional averages in no case equalled one-tenth of an inch, but local falls of 0·50″ were reported from Nathana (Ferozepore); of 0·39″ at Naushahra (Shahpur); of 0·27″ at Chakwal (Jhelum), and of 0 23″ at Daska (Sialkot). These were the heaviest showers in this area.

The rainfall in the Bengal-Assam area occurred almost wholly on the evening of the 5th or morning of the 6th, and was probably connected with the strong, humid south-westerly winds which blew from the head of the Bay into East and Central Bengal and against the Assam Hills. The amounts in this area were much larger than those reported within the rainfall area in the north-west. In the two divisions of Assam (Hills) and East Bengal the average rainfall for the division was about ½″, while in Assam (Surma) it was as much as ¾″. In the three remaining districts which received rain the average was small and unimportant. The largest local falls in this area were:—3·92″ at Brahmanbaria (Tippera); 1·18″ at Dacca; 1·20″ at Kishorganj (Mymensingh); 1·30″ at Sylhet; 1·10″ at Nemotha (Cachar) · and 1·61″ at Bogra. These amounts of rainfall are in no way exceptional at this season when damp south-westerly winds are ordinarily setting in at the head of the Bay and occasioning local storms over North-East India, and, except in East Bengal, where there is a trifling excess of rain, the amounts received in this area are less than usual. In the other rainfall area in the north-west the rainfall has also been lighter than usual, while in all other parts of the country there has been no rain.

At the end of February the ordinary cold weather rainfall over North-West India usually ceases and with the present return a fresh rainfall period commences, *viz.*, that which includes the spring storms when most of the rain which falls, occurs during thunderstorms and northwesters.

W. L. DALLAS,
Asstt. Meteorological Reporter to the Government of India.

SIMLA, *the 14th March 1897.*

DENZIL IBBETSON,
Secretary to the Government of India

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 13th March.*—There was no rain except trivial showers in Madura, Tinnevelly and Malabar. The water-supplies are diminishing; cultivation, to some extent under wells and irrigation works have supply. The standing crops have withered or are withering in the Deccan, except under canals and wells; elsewhere they are fair. The harvest continues with fair outturn in the central, southern and west coast districts and middling to poor elsewhere. Pasture is scarce except in the southern districts; but fodder is available save in the Deccan and Vizagapatam districts. The condition of cattle is good except in the Deccan, where they are getting emaciated from want of food and water. Prices are slightly easier in parts of the Circars and Deccan, but show a tendency to rise elsewhere. The numbers on relief are:—relief workers: 15,757 men, 33,109 women, 14,262 children; total 63,128 in the Deccan. Kitchen inmates (dependants).—77 men, 222 women, 3,504 children; total 3,803 in the Deccan. Others.—107 men, 146 women, 322 children, total 575 in Kurnool, Bellary, Anantapur and Ganjam; otherwise gratuitously relieved:—8 men, 2 women, 8 children; total 18 in Ganjam. Weavers.—5,489 men and 4,466 women relieved at their own trade in Kurnool, Bellary and Cuddapah, making total workers 73,083 in the Deccan, and gratuitously relieved 4,396 in the Deccan and Ganjam; total number relieved 77,479. Prices by which wages regulated are:—Kurnool, Bellary and Cuddapah 13½; Anantapur 14 seers per rupee.

Bombay.—*For week ending 16th March.*—The standing crops have been damaged by drought in four talukas of Karachi; by locusts in two of Karachi and one of Hyderabad; by frost in Shikarpur and five talukas of Hyderabad, by winds in parts of Shikarpur and the Upper Sind Frontier; by blight in two talukas of Ahmednagar; otherwise they are thriving in Sind and Gujarat; but indifferent elsewhere. The autumn harvesting is completed except in Karachi and Khandesh. The harvesting of the late crops is in progress in parts of Gujarat, Deccan, Karnatak, Konkan, Kathiawar, Wadhwan and Baroda. Preparations for the next season have commenced in parts of ten districts. Fodder is sufficient except in the Deccan, Belgaum, Ratnagiri, Shikarpur and parts of Karachi. The grain-supply is generally sufficient in affected districts. Cotton-picking continues in Ahmedabad, Broach, Surat, Dharwar and Baroda. The condition of agricultural stock is deteriorating in Poona, Ahmednagar, Sholapur, Bijapur and Belgaum, healthy elsewhere except in parts of Karachi, Shikarpur, Hyderabad, Ratnagiri and Kanara. Prices are rising in parts of Kolaba, Ratnagiri, Poona, Sholapur and Bijapur; falling in parts of Ratnagiri, Sholapur and Bijapur; stationary in Surat and parts of Kolaba, Poona and Bijapur. Prices in affected districts are:—Dharwar 13; Belgaum 11; Bijapur 10½, Sholapur 9⅞; Ahmednagar 9⅔; Nasik 9½; Satara 9¼; Khandesh 8⅔; Kolaba 8⅓ seers per rupee. The average daily numbers on relief works including dependants are:—Bijapur 79,984; Sholapur 111,686; Ahmednagar 94,011; Poona 18,167; Nasik 36,017, Satara 29,193; Khandesh 32,669, Belgaum 6,143; total 407,870, of which 292,456 are relief workers and 115,414 dependants. Of relief workers, excluding Belgaum, details for which are not reported, 90,555 are men, 126,324 women, 70,313 children. The numbers on gratuitous relief are:—Bijapur 8,498, including 64 persons in one poor-house; Sholapur 6,545; Ahmednagar 2,320, including 44 persons in two poor-houses; Poona 4,611; Nasik 156; Satara 16; Belgaum 503; Dharwar 513; total 23,162, of which, excluding Belgaum, 12,146 are men, 6,227 women and 4,286 children. Total number relieved 431,032.

Bengal.—*For week ending 15th March.*—There were slight showers of rain in many districts during the week. The rain was accompanied by hail and storm in places in Bhagalpur and Palamau, where some damage to the standing crops is reported. Ploughing is going on, and sowing of early rice and jute has begun in North Bengal. More rain is required generally. Spring rice is doing well. The harvesting of the spring crops and the collection of opium are in progress. The opium has suffered from blight in Chapra and Hajipur. The prospects of the *mahua* (*Bassia latifolia*) crop in Chota Nagpur continue favourable except in Palamau, as previously reported. The pressing of sugarcane continues, and the plantation of cane has begun in some districts. The price of common rice shows slight rises in some districts and slight falls in others. In the distressed districts the prices of the staple grain on which the famine wage is based are—Nadia (common rice) 9 seers, Khulna (common rice) 10 seers, Rajshahi (common rice) $9\frac{3}{4}$ seers, Patna (common rice) $10\frac{1}{2}$ seers, Shahabad (common rice at Bhabua) $8\frac{1}{2}$ seers, Saran (Indian-corn) 10 seers 6 chittacks, Champaran (Indian-corn) $9\frac{1}{2}$ seers, Muzaffarpur (Indian-corn) $10\frac{1}{2}$ seers, Darbhanga (Indian-corn) $9\frac{3}{4}$ seers, Bhagalpur (common rice) $9\frac{1}{2}$ seers per rupee.

The numbers on relief on Saturday, 13th March, were:—Nadia 12,396; Murshidabad 1,456; Khulna 3,914; Rajshahi 643; Pabna 191, Patna 273, Shahabad 17,863; Saran 33,119; Champaran 205,386, Muzaffarpur 48,090; Darbhanga 140,034; Bhagalpur 17,481; Hazaribagh 1,856; Palamau 4,304, Manbhum 5,017; Puri 3,499; total 497,082, against 454,305 in the previous week.

This total is distributed as follows:—

	Men.	Women.	Children.	Total.
Relief workers	13,124	108,624	54,147	295,895
Dependants	1,502	1,102	12,631	14,795
Relieved in poor-houses	702	117	402	1,521
Otherwise relieved	36,000	88,483	52,654	178,127
Test-workers	4,454	1,546	744	6,744
Private relief—				
Relief works—				
Darbhanga Raj	13,716	4,084	1,571	19,971
Hatwa	1,760	1,579	1,189	4,528
Gratuitous relief—				
Darbhanga Raj	1,865	4,383	3,614	9,862
Hatwa	175	249	181	605
Manjha	97	17	11	125

North-Western Provinces and Oudh.—*For week ending 17th March.* Save for a very light shower in Dehra Dun and a sprinkling in Fyzabad and Mirzapur, there was no rain during the week. Harvesting is in active progress except in the hill tracts and in the districts of the Meerut Division. Unirrigated and late sown crops have been somewhat damaged by high west winds in some districts. Opium is being collected in almost all districts where it has been sown. Sowing of cane continues in places. The numbers in receipt of relief on Saturday, the 13th March, in 19 districts officially recognised as distressed, were as follows:—Agra 34,517, Etawah 17,572, Cawnpore 65,402, Fatehpur 30,544, Banda 228,702, Hamirpur 72,143, Allahabad 178,408, Jhansi 76,177, Jalaun 91,898, Mirzapur 63,544, Jaunpur 32,505, Gorakhpur 38,400, Azamgarh 9,506, Lucknow 87,675, Unao 47,240, Rae Bareli 58,421, Sitapur 37,763, Hardoi 111,430, Barabanki 8,140; total 1,290,172. This total is distributed as follows among the various methods of relief prescribed by the Famine Code which are in operation:—employed on relief works 822,637; relieved as dependants 197,050; relieved in "poor-houses" 30,101; relieved under other provisions of the Famine Code 240,384; total 1,290,172. The numbers relieved in 18 districts which are under observation and not yet officially recognised as distressed were on the same date as follows:—relieved on test works 39,870; relieved in "poor-houses" 9,105; relieved under other provisions of the Famine Code 37,741; total 85,716, the grand total in receipt of relief on the last day of the week was therefore 1,376,888. The decrease in numbers on relief is due partly to the employment of the

people in harvesting the crops and partly to reduction of the famine wage in consequence of easier prices. Supplies are generally sufficient. Fodder is still somewhat scarce and dear in places. Prices are falling slightly. The price of the staple food-grain on which the famine wage is based varied from $9\frac{1}{4}$ to 12 seers per rupee in the districts officially recognised as distressed.

Punjab.—*For week ending 16th March*.—Rain averaging about $\frac{1}{10}$ of an inch has fallen in Mooltan; $\frac{1}{8}$ in Gujranwala; $\frac{1}{3}$ in Peshawar and Dera Ismail Khan; and $\frac{9}{10}$ in Rawalpindi. Rapeseed and barley are already being cut in Gurgaon. Sowings of the extra spring crops are in progress. Ploughing for the autumn crops is going on in some districts. Sowings of sugarcane have commenced in Rohtak, Gurgaon and Gujranwala. Cotton is also being sown in Gurgaon. Crops irrigated by canals and wells are generally in fair condition except those sown on brackish wells and late on canal lands in Rohtak. Crops on inundated lands and those dependent on rain are in poor condition and are suffering. Prospects are below average in Delhi. The recent rain has improved prospects of standing crops in Peshawar and Dera Ismail Khan. More rain is urgently wanted in Jullunder, Sialkot, Shahpur and Dera Ismail Khan. The stocks of food-grain have been exhausted in Hissar, Delhi, Shahpur and parts of Gurgaon, where imports are meeting requirements; are declining in Rohtak, Jullunder and Ferozepore; are insufficient with the cultivators of Amritsar; average in Peshawar; and are getting low in Gujranwala, where importations are also brisk in these days. High dry westerly winds and early setting in of the hot weather have damaged the crops more or less in Rohtak, Gurgaon, Karnal, Jullunder, Ferozepore, Sialkot and Gujranwala. The wind is still blowing in Karnal. Hail fell in parts of Peshawar, but did no damage. Cattle are generally in poor condition for insufficiency of fodder; they are dying of starvation in Hissar and Rohtak; but are said to be in good condition in Amritsar and Peshawar and average in Sialkot. Fodder is generally scarce; it is sufficient in Peshawar. The average number of relief workers and dependants, etc., was as follows:—relief worker 30,412 men, 35,469 women, 18,758 children; dependants:—1,082 men, 1,749 women, 19,429 children, relieved in poor-houses—604 men, 741 women, 498 children; otherwise relieved—2,830 men 3,577 women, 2,521 children, test workers:—148 men, 141 women, 108 children. Details not given for 2,841 persons otherwise relieved in Gujrat. The total number of workers, dependants, etc., in the Punjab was 126,968. Test-works seem to have been closed in Rawalpindi. Prices are generally high and are still rising in most districts; they are falling slightly in Amritsar and are stationary in some districts. Wheat is selling from 7 to 10 seers; gram $9\frac{1}{4}$ to $10\frac{1}{2}$; great millet $9\frac{3}{4}$ to 11; bulrush millet 9 to $11\frac{1}{4}$ and maize $9\frac{1}{2}$ to 11 seers per rupee. Prices of staple food-grains on which the famine wage is calculated are:—Rohtak gram 10 and barley 11 seers; Delhi bulrush millet $8\frac{1}{2}$; Karnal maize and gram $9\frac{1}{2}$; Ludhiana maize 11; Ferozepore gram and great millet $10\frac{3}{4}$. Lahore wheat 10, and Indian-corn $9\frac{1}{2}$, and Gujrat maize flour 9 seers per rupee.

Central Provinces.—*For week ending 16th March*.—The weather is generally clear, the days are hot and the nights cool. Harvesting of the spring crops still continues, but is nearly completed in most districts. Threshing is in progress. The mahua (*Bassia latifolia*) crop is good in Saugor; fair in Damoh, Chhindwara and Bhandara; but some damage has been caused by cloudy weather in Balaghat. Fodder and water are sufficient except in parts of Hoshangabad, Seoni, Wardha and Sambalpur. Prices fluctuate slightly; they are somewhat easier in Saugor; but there is a tendency to rise in Chanda, Nimar and Hoshangabad. The numbers on relief works and on gratuitous relief have increased in most districts, especially in Saugor, Damoh, Narsinghpur, Hoshangabad and Raipur. In Jubbulpore the decrease of relief workers is due to harvest operations. The numbers on relief works are:—Saugor 25,737; Damoh 18,633; Jubbulpore 47,361; Mandla 18,753, Seoni 6,000; Narsinghpur 21,443; Hoshangabad 35,713; Nimar 111; Betul 15,772; Chhindwara 6,541; Nagpur 2,670; Chanda 2,198; Bhandara 12,259; Balaghat 17,454; Raipur 31,649; Bilaspur 13,831. Total 276,125. The numbers receiving gratuitous relief are:—Saugor 15,411; Damoh 3,790; Jubbulpore 25,357; Mandla 5,232, Seoni 2,243; Narsinghpur 7,508; Hoshangabad 8,551; Nimar 159; Betul 2,936; Chhind-

wara 2,735; Nagpur 1,880; Chanda 408; Bhandara 2,422; Balaghat 5,471; Raipur 8,115; Bilaspur 7,267. Total 99,545. Details from 15 out of 16 districts are:—on relief works—94,377 men, 115,304 women; 65,444 children, with 1,000 unclassed; dependants:—1,030 men, 1,043 women, and 32,513 children, with 13,939 unclassed; poor-houses:—5,597 men; 5,585 women; and 7,500 children, otherwise relieved: 4,025 men, 6,214 women, and 6,068 children, with 14,419 unclassed. There were also 96,018 persons on railway and private works in Saugor, Damoh, Jubbulpore, Chhindwara, Bhandara, Balaghat, Raipur and Bilaspur. Total number in receipt of relief 375,670. The prices of the staple food-grains on which the famine wages are based are:—Saugor, Seoni and Betul 9; Damoh, Narsinghpur, Nimar, Wardha and Bilaspur 10; Jubbulpore and Nagpur 11; Hoshangabad and Bhandara 9½, Chhindwara, Chanda and Raipur 10½, and Balaghat 8 seers per rupee.

Burma.—*For week ending 13th March.*—In Lower Burma the dry weather paddy crops are ripening in Tavoy. In Upper Burma the transplanting of dry weather paddy is completed in some places and is progressing in others. Harvesting of the miscellaneous crops continues. The condition of the standing crops is generally good. The price of paddy has fallen slightly in Thongwa and Amherst, considerably in Upper Chindwin, and risen slightly in Henzada, Myaungmya, Tavoy, Mandalay and Pakokku, elsewhere it is stationary. The numbers on relief works are:—Meiktila 1,879, Myingyan 7,732, and on gratuitous relief:—Meiktila 133, Myingyan 1,720, Yamethin 302. Total number in receipt of relief 11,835. The price of rice in the affected districts was:—Meiktila 8 seers 12 chittacks, Myingyan 10 seers 4 chittacks per rupee.

Assam.—*For week ending 16th March.*—Slight rain has fallen in almost all districts. More rain is wanted in Goalpara, Kamrup and Nowgong. The ploughing for early rice and pressing of sugarcane continue. Prices:—Common rice, Silchar 9, Sylhet, Gauhati and Tezpur 10, and Sibsagar 11 seers per rupee. Fodder is insufficient in Cachar, Nowgong, Sibsagar and the Khasi and Jaintia Hills, and in parts of the Goalpara and Kamrup districts. Water is scanty in Nowgong, Sibsagar and parts of the Goalpara district.

Mysore and Coorg.—*For week ending 17th March*—MYSORE Prospects are fair. Prices have risen slightly in Bangalore and Kadur.

COORG:—Rain is much needed. No crops are standing. Prices are normal. Water and fodder for cattle are sufficient.

Berar and Hyderabad.—*For week ending 16th March.*—BERAR: The weather is warm. Harvesting of the winter crops continues. Threshing of wheat and linseed is in progress. Land is being prepared for the next rain crop. Fodder and water are inadequate to wants throughout the province. Prices of food-grains have risen during the week. 14,521 persons were employed on relief works. The information regarding the number of workers employed and the prices prevailing in Amraoti and Buldana has not been reported. Prices:—jowar, Akola 10; Basim 9¾; Melghat 7 seers per rupee.

HYDERABAD:—No rain during week. Harvesting of spring crops continues. Fodder, pasture and water scarce. Aggregate number of persons employed on relief works in Gulburga, Raichur, Lingsagar and Naldrug:—4,712. Prices:—wheat 6½, coarse rice 6½ and juari 10¾ seers per current sicca rupee.

Central India.—*For week ending 16th March.*—No rain fell in Central India during the week. Agricultural operations are in progress in all Agencies. The spring crops are in good condition in Baghelkhand, Malwa and in one district of Gwalior; fair in Bhopal, Bhopawar and four districts of Gwalior; bad and indifferent in remaining districts of Gwalior. Agricultural stock is in fair condition in Bhopal; good in Baghelkhand, Malwa, Bhopawar and five districts of Gwalior; bad and indifferent in remaining districts of Gwalior. Pasturage is fair in Bhopal and Malwa; good in Baghelkhand and Bhopawar, and in two districts of Gwalior; bad and indifferent in remaining districts of Gwalior. Prices are above normal in Baghelkhand, Malwa and Bhopawar; steady elsewhere. The

opium crops are fair in Bhopal Bhopawar and one district of Gwalior; good in Malwa and two districts of Gwalior. The number of persons employed on famine relief works were:—in Gwalior 21,832; Baghelkhand 67,428. On gratuitous relief: 20,666 in Gwalior and 4,199 in Baghelkhand. Total number of persons relieved 114,125. Prices 10 to 10½ in Gwalior and 11 seers per rupee in Baghelkhand. Report from Bundelkhand not received.

Rajputana.—*For week ending 17th March.*—Rainfall:—7 cents in Reni, in Bikanir; none elsewhere. Agricultural operations are fair in Kherwara; commencing in Bhurtpur, poor in Dholepore, and satisfactory elsewhere. The standing crops are ripening in one State; fair in another; thriving in two; poor in one; suffering from high winds in parts of Ulwar; and are good elsewhere. The harvest is very good in Kherwara; favourable in Marwar and Jeypur; good in Jhallawar; moderate in Bhurtpur; and below average in Haraoti. Cattle lean in Bhurtpur; in fair condition in four States; and good elsewhere. Pasturage or fodder fair in Haraoti, failing in Dholepore and Bhurtpur; scarce in some tehsils of Jeypore; and sufficient elsewhere. Prices are high in one State; falling in three; rising in two; and steady elsewhere. The number of persons on relief works was:—Marwar 4,592; Kotah 752; Tonk 63; Dholepore 5,665; Bikanir 11,801; Jaisulmere 825; and on gratuitous relief:—Marwar 1,044; Tonk 1,302; Bhurtpur 489; Bikanir 3,493; Jaisulmere 106. Total number in receipt of relief 30,132. The prices of the staple food-grains on which the famine wages are based are:—Marwar 8 to 11; Kotah 14½; Tonk 10 seers 5 chittacks; Dholepore 11 seers 4 chittacks; Bhurtpur 10 seers 2 chittacks; Bikanir 9 seers 2 chittacks to 8 seers 2 chittacks; Jaisulmere 8 9/16 seers per rupee.

Kashmir.—*For week ending 16th March.*—The weather is fine. The spring crops are generally in good condition. Prices continue a little below normal. Price:—24 seers per rupee.

Jammu Province.—*For week ending 17th March.*—No rain. Prices stationary. Fodder scanty. Price:—9½ seers per rupee.

Nepal.—*For week ending 13th February.*—Weather is warm with very high westerly winds. Land is ready for Indian corn and early rice, but rain is wanted. Prospects of spring harvest are good. Prices:—8 seers per rupee.

The total numbers in receipt of relief during the preceding and present weeks are as follows:—

(*a*) Although for convenience classed amongst state railways, this line is the property of the Bengal Central Railway Company. The working of this line has been taken in hand by the Company from the 1st January 1897.

(*b*) Includes the Bhopal-Harsi railway.

(*c*) Total earnings from 22nd February to 7th March 1896.

(*d*) Includes the Godhra-Ratlam-Nagda railway.

(*e*) Includes the Gadag-Hotti section.

(*f*) Includes the Tirhoot state railway. Although for convenience [illegible]

(*g*) Includes the Jammu and [illegible] railways.

(*h*) This line has been transferred to the Company from the 1st September 1896, but until [illegible] the line to be formally taken over, it will be worked by the state on behalf of the company.

(*i*) Includes the Wardha Coast, Dudna Extension, the Khamgaon, and the Amraoti railways.

(*k*) [illegible]

GOVERNMENT OF INDIA.
PUBLIC WORKS DEPARTMENT.
RAILWAY STATISTICS.

No. XLVI of 1896-97.

STATEMENT OF APPROXIMATE GROSS EARNINGS OF INDIAN RAILWAYS.

N.B.—As regards the figures in column *Total earnings from 1st April 1896*, audited figures have been used as far as possible.

Railway.	Average earnings per mile per week in 1895-96.	Week ending 7th March 1896. Earnings. Mean mileage worked.	Earnings. Total.	Per mile open per week.	Week ending 6th March 1897. Earnings. Mean mileage worked.	Earnings. Total.	Per mile open per week.	Earnings from 1st April 1895 to 7th March 1896	Earnings from 1st April 1896 to 6th March 1897.	Increase.	Decrease.

PART V.

Bills introduced in the Council of the Governor General of India for making Laws and Regulations, Reports of Select Committees presented to the Council, and Bills published under Rule 22.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Bill was introduced in the Council of the Governor General of India for the purpose of making Laws and Regulations on the 26th March, 1897:—

NO. 8 OF 1897.

A Bill to amend Act XX of 1863 (an Act to enable the Government to divest itself of the management of Religious Endowments).

WHEREAS it is expedient to amend Act XX of 1863, relating to the administration of Religious and Charitable Institutions and Endowments of a public character in British India; It is hereby enacted as follows:—

Short title, extent, application and commencement

1. (1) This Act may be called the Religious Endowments Amendment Act, 1898.

(2) It extends to the whole of British India and applies to all non-Christian Religions and Charitable Institutions and Endowments of a public character the annual income of which does not fall below two hundred and fifty rupees; and

(3) It shall come into force on the first day of January, 1898.

Definitions.

2. In this Act, unless there is anything repugnant in the subject or context,—

(1) "Religious and Charitable Institutions" include all temples, mosques, pagodas, shrines and charitable institutions by whatever local designation known, and all property endowed or purchased, and all offerings of pilgrims connected therewith, whether applied to religious or charitable or other purposes, which are not the personal property of, and offerings to, any individual:

(2) "trustee" includes all persons, by whatever local designation such persons may be known, who have charge or management of any institution, or the property of any institution, in trust: and

(3) "Civil Court" means the Court of the District Judge in the district in which the institution is situated.

Formation of electorates.

3. (A) In every District where a Committee such as is contemplated by Act XX of 1863 has been constituted, such Committee shall, within a month of the passing of this Act, prepare a register, and publish in all public offices and institutions a list of the leading persons of each religion or sect which has any institution in the district, including the principal landholders, pandits, moulvies and priests, and all such men of respectability and position as in the opinion of the Committee ought to be included in this list. (B) Provided that, where no such committee has been constituted, the Civil Court of every District shall, within a month of the passing of this Act, nominate three persons of each religion or sect to form a Committee to prepare and publish the aforesaid list.

The persons of each religion or sect included in this list shall be "the district electorate" of that religion or sect in that District for the purposes of this Act. But the said Committee

*

shall include or eliminate the name of any person who, in the opinion of two-thirds of the persons in the lists so prepared, may be recommended or objected to.

Formation of District Committee.

4. The said Committee shall call upon each electorate to meet at a time and place to be fixed by it, and duly notified in all public offices and institutions, and elect by a majority of votes, not less than three, and not more than five, members to form "the District Committee" for the control of the endowments of that religion or sect in that District.

Formation of Central Committee.

5 Each District Committee of any Province within a month of its election shall elect a voting Delegate. Such voting Delegates shall meet at a time and place jointly agreed upon and shall elect by a majority of votes not more than five members, and the members so elected shall form "the Central Committee" of that religion or sect with head quarters at any place that the said Committee by a majority of votes may elect for the purpose.

Default of electorate.

6. In case the district electorate or the District Committee fail to make the elections required by sections 4 and 5, the Civil Court of each defaulting district and the High Court of the Province shall nominate the members of the District and Central Committees respectively.

Tenure of office of members of Committees.

7. The District Committee and the Central Committee shal hold office for three years, but will continue in office until relieved by their respective successors, and their members will be eligible for re-election The said Committees shall elect their own chairman and decide all matters by a majority of votes, each member having one vote and the chairman having a casting vote.

Powers of Central Committee

8 As soon as the first Central Committee shall have been formed, the powers hereby conferred on the Committees referred to in clause A and B of section 3 shall thenceforward vest in such Committee and its successors

Removal of members of Committees

9 Any member of the District or Central Committee, who shall be found guilty of misconduct or any conduct which make him unfit for his place, shall be liable to be removed by the unanimous vote of the remaining members

Provision for vacancies on Committees.

10 Any vacancy caused by death, resignation or removal of any member shall be filled up according to the provisions of the aforesaid sections 4 and 5 The member or members so elected shall hold office only for the unexpired portion of the Committee's tenure of office The District and Central Committee, on the expiration of the tenure of their office, shall also be elected in the same manner.

Revision of lists of electorates.

11 Each Central Committee shall, in the first quarter of the last year of its tenure of office, either confirm or reverse the lists of District electorate, and shall in the last quarter of the same year cause the District Committees and District electorates to make their respective elections under sections 4 and 5 : Provided that, in case such District Committees or District electorates fail to act, the High Court of the Province and the Civil Court of the District shall respectively exercise powers conferred under this section.

Powers of District Committee.

12. The District Committee of each religion or sect shall have absolute control, not inconsistent with their maintenance, over the institutions belonging to that religion or sect, including the appointment of the trustees, according to the custom prevailing in each institution, as vacancies shall occur after the passing of this Act, but shall not have the power of dismissal of trustees for misconduct, disobedience of orders issued by the District or Central Committee or dereliction of duty assigned to them except as hereinafter provided.

Duties of District Committee

13 The District Committee shall keep a register of the institutions in its charge, with properties appertaining to them, and the trustee shall submit, within a time to be fixed by the District Committee, a list of all such properties. The trustees shall prepare a budget of receipts and disbursements including their rateable share of costs of necessary establishment of the District and Central Committees in March every year for each shrine, and shall likewise submit monthly or quarterly accounts. All these shall be kept and submitted in the forms prescribed by the Central Committee in consultation with the District Committee.

Revision of budget

14. The District Committee may, by a majority of votes, revise the budget as they see fit, subject to confirmation or revision by the Central Committee.

Custody of property

15 The property and the proceeds of every institution shall remain in such custody as at the commencement of this Act, subject to such provisions as the District Committee shall, with the sanction of the Central Committee, prescribe for their safety.

Appeal to Central Committee

16. The orders of the District Committee shall be appealable to the Central Committee, whose decision shall be final.

Power of Central Committee to make inquiry.

17. In addition to the powers conferred by section 13 of Act XX of 1863, the Central Committees of each religion or sect shall have power to call for explanation from the trustees subject to their control and to hold enquiries into the management and the conduct of such trustees. The Civil Court within whose jurisdiction such enquiries are held shall, on the application of the Chairmen of such Central Committees, issue the necessary processes for production of documents and the appearance of witnesses at such enquiries.

The District and Central Committee shall have power to take evidence on oath in any inquiry before them, and their members, individually and collectively, as well as the trustees, of any institution or property aforesaid shall be public servants within the meaning of the Indian Penal Code.

Rules and bye-laws.

18. The Central Committee of each religion or sect in consultation with the District Committee of that religion or sect shall have power to frame necessary bye-laws and rules for the election of the members of the said Central and District Committees, and for the proper management of the institutions and properties within their respective jurisdiction, and for the due discharge of their duties by the aforesaid trustees. These bye-laws and rules and the annual report of the administration of the institutions and properties in their respective jurisdiction shall be published in each provincial Gazette not later than the middle of June of every year.

Expenses of Committees

19. The District Committee shall be entitled to maintain an office and an establishment ordinarily costing not more than fifty rupees per mensem, and the Central Committee not more than one hundred rupees per mensem, exclusive of other incidental charges, such as the cost of auditing of accounts, or the travelling expenses of any member deputed to inspect any institution, or make local enquiry whenever necessary. These items of expenditure shall, as far as practicable, be rateably apportioned among the several shrines of the districts or recovered from the particular shrine to which they relate, and shall be included in the budgets and the accounts of the shrines or shrine in question, respectively.

Amendment of section 18, Act XX, 1863

20. In section 18 of Act XX of 1863, after the words "no suit" and before the words "shall be entertained" the following words shall be inserted, *viz.*, "except when such suit is brought by any Central Committee of any religion or sect constituted under this Act."

STATEMENT OF OBJECTS AND REASONS.

1. The object of the Bill is to remove certain defects in the management of Religious and Charitable Endowments under the law as it stands at present.

2 The Bill proposes to leave the existing trustees where they are. It allows their successors to come in, in accordance with the usage in vogue in each institution in that behalf. It leaves untouched all the trust property and income in the very hands which now hold them. It leaves them to carry on the customary expenses as hitherto, but only subject to budgeting previously and subject also to providing for possible contingencies which might arise for revision of such budget—a revision which no Committee would be found to make repeatedly or largely in the face of long-standing usage.

3 As regards the cost of the controlling agency, advantage is taken of the widespread ambition and readiness to render *unpaid* service in public interests, and each endowment is laid under a contribution, which is the veriest minimum that can be imagined as needed for maintaining a fairly efficient subordinate official staff.

4. As to the *constitution* of the controlling machinery, the Bill provides for two sets of Committees for each religion or sect. It makes the District Committees exercise *direct* supervision over the trustees, and the higher or Central Committees as they are called, to exercise *general* supervision and act as an appellate tribunal to correct mistakes and remedy the effects of likes and dislikes on the part of the District Committees.

5. The Committees are formed on the basis of election by the better class of worshippers of each religion or sect. An electorate formed by such classes should, it is thought, suffice for all practical purposes.

6 The members of the Committees would hold office *for a term of years* and *no for life* as now.

7. The Bill proposes to abolish the distinction which the present law makes between the endowments which had been under the direct control of the Government at one time and those that had not been so, malversation of the one class being as culpable as of the other

8 It is proposed to enlarge the powers of the Central Committees relative to holding enquiries into the conduct of trustees, and dispense with the necessity on their part to obtain prior sanction to sue which the present law enjoins; while the trustees will continue to enjoy the present safety against harassment by any action of Committees by being liable to dismissal only by means of the decree of a Civil Court.

P. ANANDA CHARLU.

The 22nd March, 1897.

J. M. MACPHERSON,
Secretary to the Government of India.

The Hon'ble PANDIT BISHAMBAR NATH said :—"The Bill to enable local authorities to borrow money for temporary emergencies. I am afraid it is rather late. I have only to offer a few remarks. The addition of a sub-clause to section 2, as has now been proposed by the Select Committee, does not afford substantial relief. If the permission to be given to local authorities to borrow money for temporary emergencies means or implies imposition of a fresh tax or taxes, sooner or later, by empowering or authorizing such authorities in that behalf, I crave leave to demur to the measure.

"The present situation is a critical one, as it has not inaptly been described by a contributor to a well-known daily local paper. His words are to the following effect :—'Famine on right; starvation on left; plague in front; and death on back.' In connection with the other minor troubles to which the exigencies of the time have subjected the people rather sorely. I believe it would not be out of place altogether if I were permitted to say here, simply for the information of this Council, that the military vigorous operations, conducted in the city of Poona and Bombay, for cleansing and searching purposes, innocent in themselves, indeed, are supposed to cause annoyance and irritation; while a rule framed regarding the burial of the dead bodies of bubonic patients, with chloride of lime, is reported to have been condemned with indignation by almost all the influential representatives of the Muhammadan community at Lucknow. If the rule were enforced, such treatment of the dead would become intolerable. Moreover, such insignificant incidents, however well-intentioned they may be, are, I am sorry to find, apt to be misconstrued by the people of this country when they are panic-stricken.

"Leaving this little digression aside, I beg to resume that the imposition of any fresh tax, emergent as it may be, would, to say the least, be regarded as out-heroding Herod. As the people have enough of imperial and local imposts to pay, it is not expedient to devise further means for adding to their unbearable burdens, at least until they are our of danger.

"The Hon'ble Sir James Westland has cited chapter and verse from certain enactments relating to the Municipalities and District Boards in Bombay, Punjab, Central Provinces, Burma, Bengal and the North-Western Provinces and Oudh, with the object of showing that the present measure imposes no obligation upon the local bodies, but that it simply enables them to borrow money, if they desire, on the security of their funds, for meeting their obligation. I am not prepared to dispute the soundness of the argument of the Hon'ble Member. I have also full sympathy for the present distress of the weavers of Sholapore and the lace-workers in Delhi. What I mean to object to is that, if in the event of their additional borrowings, the local bodies find the funds at their disposal insufficient for repayment of the loans they might be obliged to raise, a fresh tax shall have to be imposed, the proceeds of which would in all probability be set apart for satisfaction of the debt, without allowing to spend such proceeds on general purposes. Where a tax is once imposed, no subsequent appeal proves successful in getting rid of it, even after expiry of the probable period for which it is levied.

"As the North-Western Provinces and Oudh Municipalities Act (Act No. XV of 1883) does not provide for the establishment and maintenance of relief works in time of famine, those municipalities must, I think, come within the purview of the sub-clause that has now been added to section 2 by the Select Committee.

"It is true that local bodies will not be extravagant in expenditure upon emergencies, and that their borrowing powers would be exercisable subject to the previous sanction of the Government of India or that of the Local Government, but if they borrow money for famine purposes and then have no means available for its repayment, how are they to meet the liability they might incur except by imposing taxation? They cannot stop their ordinary or starve their necessary works?

The Hon'ble SIR JAMES WESTLAND said :—"I do not think it necessary to make any further remark on this subject unless that I think the section introduced by the Select Committee prevents, so far as the province represented

by the Hon'ble Member is concerned, the operation of the Act in the direction to which he objects. It is quite true that in Bombay the Municipal authorities have powers to do what in the North-Western Provinces they have no power to do. We are not conferring these powers upon them, and we are not saddling them with any expenditure they are not bound to make. Any result of that sort which may arise, will arise not by reason of the Act, which I shall presently ask the Council to pass, but by reason of the Act which at present stands on the Statute Book in regard to Municipalities in Bombay."

The motion was put and agreed to.

The Hon'ble SIR JAMES WESTLAND moved that the Bill, as amended, be passed.

The motion was put and agreed to.

INDIAN STAMP ACT, 1879, AMENDMENT BILL.

The Hon'ble SIR JAMES WESTLAND moved that the Report of the Select Committee on the Bill to amend the Indian Stamp Act, 1879, be taken into consideration. He said:—"It will be observed that I have an amendment to propose presently. The amendment is purely a formal one It arises in this way. As the Bill was drafted it made a reference to the General Stamp Act of 1879, but the provisions of the Bill are that certain sections be incorporated in and become part of the Act of 1879. The consequence is that the Act of 1879 is to be quoted not as the Act of 1879 but as 'this Act'. Hon'ble Members will observe that the amendment is little more than a grammatical one and I shall move it in due course. There is also another remark which I desire to make with reference to the operation of the Bill. The Secretary of the British Indian Association, writing on behalf of the Association, says that he entirely approves of the objects of the Bill, but he points out one curious bye effect It is this In the second schedule to the Act it is provided that certain leases, namely, agricultural leases, shall be altogether exempt from taxation. The Act itself, in the part of it which we amend provides that transfers of leases shall be liable to the same duty as leases. That provision we now cancel by making transfers of leases liable to a specific duty, but that specific duty unfortunately covers all transfers of leases. The consequence is that it covers transfers of leases which are free under the Act as it at present stands, the transfers, namely, of those agricultural leases This is an effect which was not in the least degree intended. It is a simple matter and one in respect to which it is not necessary to move a formal amendment. At the same time the Government will take the opportunity of using the powers of exemption which it possesses under the Act of 1879 and will to-morrow issue a notification declaring the exemption of this particular class of transfer of lease from any duty to which it may be liable under the Act. By this means the object which is sought for by the British Indian Association will be gained."

The motion was put and agreed to.

The Hon'ble SIR JAMES WESTLAND also moved that in the proviso to section 7B, proposed to be added to the Indian Stamp Act, 1879, by section 1 of the Bill, as amended by the Select Committee, for the words and figures "under the Indian Stamp Act, 1879, prior to its amendment by this Act," the words and figures "prior to the twenty-sixth day of March, 1897," be substituted; and for the words "that Act" the words "this Act" be substituted.

The motion was put and agreed to.

The Hon'ble SIR JAMES WESTLAND also moved that the Bill, as amended, be passed.

The motion was put and agreed to.

REORGANIZATION OF THE SUPERIOR SERVICE OF THE EDUCATION DEPARTMENT.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 26th March 1897.

RESOLUTION—No. 1244.

READ—

(1) Resolution No. $\frac{4\text{-Education}}{201\text{—}215}$, dated the 23rd July 1896, from the Government of India in the Home Department.

(2) Letter No. 959T., dated the 27th October 1896, from the Offg. Director of Public Instruction.

(3) Letter No. 957T., dated the 30th October 1896, from the Offg. Director of Public Instruction.

(4) Sir Alfred Croft's note, dated 15th February 1897.

1. Sir Alexander Mackenzie regrets the delay which has taken place in settling this difficult question. This delay was due to the serious illness of Sir Alfred Croft whose mature advice regarding the many problems involved was much to be desired.

2. The provisions of the scheme, as sanctioned by the Right Hon'ble the Secretary of State, are the following :—

The Department of Education is to be divided broadly into (A) the Superior Service and (B) the Subordinate Service. The former will consist of two branches, one including all posts to be filled by persons appointed in England, which will be called "The Indian Educational Service," and the other, including all posts to be filled by recruitment in India, which will be known as "The Provincial Educational Service."

The Indian Educational Service is to consist of 27 officers, including the Director of Public Instruction, Assam, the Inspector of European Schools, and the Superintendent of the School of Art.

The appointments to be included in this service are—

5 Inspectors of Schools (including the Director of Public Instruction, Assam, and the Inspector of European Schools).

5 Principals of Colleges, viz., those of—
- The Presidency College.
- The Sibpur Civil Engineering College.
- The Patna College.
- The Dacca College.
- The Calcutta Madrasah.

13 Professors, viz.—
- 8 in the Presidency College.
- 2 in the Sibpur Civil Engineering College,
- 2 in the Patna College,
- 1 in the Dacca College.

1 Superintendent of the School of Art.

3 officers to fill vacancies.

Total ... 27 officers.

The Provincial Educational Service is to consist of 104 officers, as follows :—

5 Inspectors of Schools.
10 Assistant Inspectors
7 Principals and
51 Professors of Colleges.
24 Head-masters of Collegiate and Training Schools.
7 Others, including the (1) Assistant Superintendent and the (2) Head-master of the School of Art, (3) the Personal Assistant to the Director of Public Instruction, and (4) supernumerary appointments (Professorships) to be filled by Indian gentlemen with degrees from the Universities of England, Scotland and Ireland, or by Premchand Roychand students.

Total ... 104

That is, the Superior Service is ultimately to consist of—

	Officers.
Indian Educational Service	27
Provincial ditto	104
Total ...	131

The inclusion in the Provincial Service, on personal grounds, of nine other officers has received the sanction of the Secretary of State, and the number in that service was in this way to be brought up temporarily to 113. Of these nine officers, two have been absorbed by appointment to posts which bring them *by right* into the Provincial Service, and one has retired. The Provincial Service should, therefore, apparently consist now of 110 officers; but as the Indian Service numbers now three men more than the sanctioned number, the number in the Provincial Service must be temporarily reduced to 107: thus the Superior Service will at present consist of—

	Officers.
Indian Service	30
Provincial „	107
Total ...	137

By the 1st of May next, *i.e.*, after the retirements of Messrs. Ewbank and Stack, the service will consist of—

	Officers.
Indian Service	28
Provincial „	109
Total ...	137

The Director of Public Instruction will be instructed, when this can be done without impairing the efficiency of the department, to reduce the Superior Service to the proper number of 131 officers by the appointment of officers who are now placed in the service on personal grounds, to posts which properly belong to the Provincial Service.

3. It may be noted, in passing, that of the six Professors sanctioned for the Civil Engineering College, one is referred to in statement G attached to Sir Alfred Croft's No. 1414T., dated 28th June 1895, as "lately indented for from England." The Secretary of State has supplied for the post Mr. Tate, whom he appointed under covenant for five years on Rs. 500 a month, and has directed that this officer is to be reckoned as an officer of the Indian Service after his period of probation. For the present Mr. Tate is given a place in the Provincial Service in square brackets to show that, though not regularly belonging to the service, he nevertheless fills up one of the 104 posts included in the cadre of that service. On the termination of Mr. Tate's period of probationary service the Superior Service will consist of—

	Officers.
Indian Service	28
Provincial „	103
Total ...	131

This follows from the fact that the 27 officers originally provided for have all got posts assigned to them, and that Mr. Tate thus becomes an additional officer in the service.

Indian Educational Service.

4. The names of the 30 officers who now form the "Indian Educational Service" (under which term is included here and in subsequent paragraphs of the Resolution the former graded Superior Service) are given below. To each

officer the choice of the old and the new service was given, in accordance with the orders of the Secretary of State, and the choice of each is recorded after his name:—

Name of Officer.	Service for which he has elected.
1	2
A. L. V. Ewbank ...	Old.
A. Pedler ...	Old.
F. J. Rowe ...	Old.
J. Willson ...	Old.
J. S. Slater ...	Old.
W. Booth ...	Old.
G. A. Stack ...	Old.
J. H. Gilliland ...	Old.
A. C. Edwards ...	Indian Educational Service.
J. Mann ...	Ditto ditto.
P. K. Ray ...	Old.
S. Robson ...	Indian Educational Service.
A. Macdonell ...	Old.
E. F. Mondy ...	Indian Educational Service
M. E. DuS. Prothero ...	Old.
H. M. Percival ...	Old
A. F. R. Hoernle ...	Indian Educational Service.
S. C. Hill ...	Ditto ditto.
P. B. Mukerji ...	Old.
G. W. Kuchler ...	Indian Educational Service.
C. Little ...	Ditto ditto.
J. C. Bose ...	Old.
C. R. Wilson ...	Indian Educational Service.
N. L. Hallward ...	No choice.
H. R. James ...	Ditto.
W. B. Livingstone ...	Indian Educational Service.
B. Heaton ...	Question unrecorded.
C. W. Peake ...	Indian Educational Service (no choice given).
H. A. Bamford ...	Ditto.
E. B. Havell ...	Ditto.

5. At the time when a choice was given several factors of the scheme were unknown [notably (*a*) the number of staff allowances which will be allowed to the service, (*b*) the principle which will regulate promotions, and (*c*) the date from which effect will be given to the scheme], and Sir Alexander Mackenzie thinks that it is only proper that these officers should be given an opportunity of reconsidering their choice.

6. On the subject of staff allowances, the orders contained in the Government of India Resolution No. $\frac{4\text{-Education}}{201\text{—}15}$, dated 23rd July 1896, are as follows:—

The plan suggested by the Secretary of State in 1892 of attaching personal allowances to the office of Principal and senior Inspector of Schools has been adopted. There will be two grades of allowances of Rs. 250—50—500 and Rs. 200—10—250 a month, respectively, so as to correspond to some extent with the higher rates of pay in the graded list, which will be supplanted by the new system. The allowances will be strictly *personal*, within the meaning of the Civil Service Regulations, *i.e.*, they will be held continuously by officers whether on duty or on leave (subject to the provisions of the leave rules in regard to allowances during leave), and will not be given to those who act for them during their absence. The following is the scale of allowances allotted to the several provinces:—

* * * * * * * *

Bengal.—(*a*) Two allowances of Rs. 250—50—500 a month, and (*b*) three allowances of Rs. 200—10—250 a month. The allowances will be open to the two senior Professors only at the Presidency College, Calcutta, and to Principals of Colleges and Inspectors of Schools generally, the rule being that they should be given to the senior, or most deserving, men, and should not be treated as staff allowances attached to certain offices.

7. In connection with these orders, Sir Alfred Croft has noted:—

An unfortunate mistake has crept into the Proposition Statement, showing the new sanctioned scale. In paragraph 5 of the Government of India's letter No. 210, dated the 18th August

1894, it is stated:—"The Lieutenant-Governor agrees with the Government of India that there should be two personal allowances on the higher scale of Rs. 2,0--50—500 . . . . The Government of India are of opinion that the number of allowances on the lower scale should be fixed at four (one of which would be held by the Director of Public Instruction in Assam)." In my letter to Government, No. 1414T., dated 28th June 1895, I referred (end of paragraph 2) to the number of officers in the "European Service" (now styled "Indian") as 27; but in the attached Proposition Statement A, showing the financial effect to Bengal, I excluded the salary of the Director of Public Instruction, Assam, and reduced the number of officers to 26, with two higher-scale allowances and three lower. To the "three lower" I appended a foot-note, "Excluding the Director of Public Instruction, Assam"; but this was unfortunately misprinted "Including." The Government letter forwarding these Proposition Statements to India (No. 2832, dated 14th August 1895) explains (paragraph 3) that there are to be 26 officers of the European Service, "exclusive of the Director of Public Instruction, Assam"; and it was not noticed that Proposition Statement A showed 26 officers, *including* the Director of Public Instruction, Assam. The mistake was not subsequently detected, and it is repeated in Appendix B, attached to the Home Department Resolution of the 23rd July 1896, in which, while 27 appointments are shown, "including the Director of Public Instruction, Assam," there are only five personal allowances, two in the higher and three in the lower scale. I hope I am right in assuming that the mistake has only to be pointed out to be corrected, and that the number of personal allowances for Bengal and Assam together will be increased from five to six, as stated in India's letter quoted above. I should also point out that while in that letter the personal allowance for the Director of Public Instruction, Assam, was restricted to the lower scale, no such restriction finds a place either in the Resolution of the 23rd July 1896 or in Appendix B attached thereto. I presume that the original order stands good, but a definite ruling on the point seems necessary.

8. The Lieutenant-Governor agrees with Sir Alfred Croft in thinking that five staff allowances only were sanctioned for Bengal owing to the mistake referred to. The matter will be brought to the notice of the Government of India, with a recommendation that the mistake may be rectified.

9. In regard to the principle by which the promotion of officers coming under the old or under the new system shall be governed, Dr. Martin, in his letter No. 987T., dated 30th October 1896, proposed the following rule:—

No officer, to whichsoever service he may belong, will have any claim to promotion, be it to Class I or Class II of the graded service, or to one of the staff allowances in the Indian Educational Service, till such time as he would have had a legitimate expectation of preferment, on the supposition that the Education Department officers who were graded on the 1st July 1896 had elected for the particular service to which he belongs.

This rule is criticised by Sir Alfred Croft in the following terms:—

The necessity of a rule upon the point arises from the fact that there are eight (what may be called) staff appointments under the old system, and only six under the new. The officers affected could not claim more than eight staff appointments, however distributed between the old and the new service, but they seem at first sight to be entitled to six at any rate. If all the officers had chosen the old system, or all the new, there would be no difficulty; and Dr. Martin's proposed rule is based on this supposition. But the result of it would be that, as the distribution stands, the number of officers enjoying staff allowances might easily be not only less than eight, but less than six. This will be evident from the following statement. On the 1st April Messrs. Eabank and Stack and I shall have retired, and I assume that Dr. Martin will be appointed Director. The seven officers will then stand as follows in their order:—

Old system.	*New system.*
Poller	
Rowe	
Willson.	
Slater	
Booth.	
Gilliland.	
	Edwards.
	Mason.
Roy	
	Robson.
Macdonell	
	Mulvany.
Prothero	
	Hamble

Messrs. Poller and Rowe will be promoted to Class I of the old service, and Messrs. Willson, Slater, Booth and Gilliland will remain in Class II. The other two appointments out of the six in Class II will be suspended. Messrs. Edwards and Mason cannot claim them, because they have elected the new service, in which there are only six staff appointments. Dr. Roy and Mr. Macdonell cannot claim them, the way being blocked (under the assumed rule) by

Messrs. Edwards and Mann. Next let us suppose, what will probably be the case, that Messrs. Podler and Willson go on leave from the 1st April. The two appointments in Class I will then be held by Messrs. Rowe and Slater. In Class II there will be Messrs. Booth and Gilliland and Dr. Roy, and no others will apparently be entitled to promotion. For the claim of Mr Edwards to promotion is only valid on the supposition that all the officers above him have chosen the new service, and that one of the six personal allowances is left vacant for him. But the six allowances in the new service are strictly personal, and no junior officer succeeds to one when his senior goes on leave. Mr. Edwards, therefore, would have no claim, nor similarly would Mr. Mann. The claim of Mr. Macdonell is barred by Mr. Robson, the eighth remaining officer in the list. Hence, only five staff appointments would be enjoyed. To take an extreme supposition, if all the first six officers on the list were on leave together, no officer in the new service would, under the proposed rule, be entitled to promotion, and the only promoted officers in the old service would be three,—Messrs. Roy, Macdonell and Prothero. No officer in the new service would, in fact, be entitled to promotion until one of the six senior men had retired.

These are the obvious objections to the proposed rule; briefly, that the number of staff appointments actually held at one time would often be less than the number sanctioned under either system. But having given the subject full consideration, I am inclined to think that Dr. Martin's proposal is sound. It is certainly, in my opinion, correct as regards permanent promotions. With regard to officiating promotions there is room for doubt, but even so, it may be defended. The rule is based on the principle that no officer can rightfully claim any advantage which would not have been open to him had all his seniors elected the service to which he belongs. Therefore, no junior officer in the old service can claim promotion merely from the fact that senior officers in the new service, who would otherwise have come within range of promotion, are not entitled to it. Again, officers in the new service would seem to have no grievance, because the Government orders have made it clear that the personal allowance of an officer on leave is not transferable to his substitute; and further, those officers in Class III, who have chosen the new service and are of 10 years' standing (Messrs. Edwards, Mann, Robson, Mondy, Hornle and Hill) gain the immediate advantage of an increase of pay to Rs. 1,100. At the same time it is not clear that officers, when making their choice, have understood on what principle future promotions are to be made. Mr. Edwards, for example, told me that he expected officiating promotion if an officer went on leave, making him the sixth on active service, which promotion he would not be entitled to under the proposed rule. This question of promotions may possibly have arisen in other provinces, and it may be necessary to refer it to the Government of India for settlement. When definite orders on the point are issued, I should recommend that officers be given an opportunity of reconsidering their choice. This will be all the more necessary if any increase, such as I have proposed above, be made in the number of personal allowances in the Indian Educational Service. Meanwhile I would suggest that the word "permanent" be inserted before "promotion" in the proposed rule, the question of officiating promotion being left for future settlement.

Sir Alexander Mackenzie is inclined to concur in the view thus taken by Sir Alfred Croft, but as the question is involved in difficulty, it will be necessary to refer it to the Government of India for orders.

10. It has been ordered that "an officer of 15 years' approved service, whose total salary did not exceed Rs. 1,000, shall be given a special allowance of Rs. 100 a month." This order will have force from the date from which the new scheme will take effect. The names of officers who will reap the benefit of this ruling are not now mentioned, in view of a reconsideration of choice between the old and the new system being conceded to all of the officers of the old graded service.

11. It will not be out of place to consider here the status of Messrs. Livingstone and Bamford, who may be confidently expected to elect for the new service. The facts about Mr. Livingstone are that he was appointed to Government service in 1865, appointed to officiate in Class IV on the 17th May 1880, and acted continuously in that class up to the date of his confirmation on the 15th November 1892. He drew Rs. 700 a month from 1880 to 1892, and from the 15th November 1892 he drew Rs. 750. From every subsequent 1st December the accrual of an increment may be reckoned under Article 165 of the Civil Service Regulations. Thus, Mr. Livingstone may be regarded as having been entitled to Rs. 950, for the purposes of this scheme, from the 1st December 1896. Mr. Bamford's case is different. He was appointed to be Assistant Inspector of European Schools in February 1885. His pay was subsequently raised to Rs. 500—50—750, and after officiating as Inspector for some time he was confirmed as Inspector on the 1st November 1890. He has drawn Rs. 750 from 11th February 1895, and was therefore entitled to Rs. 800 from 11th February 1896.

PROVINCIAL EDUCATION SERVICE.

12. As already stated in paragraph 3 above, this service is for the present to consist of 107 officers. On Mr. Stack's retirement from the Indian Service, it will be increased to 108 officers, and on Mr. Ewbank's retirement, it will consist of 109 officers; and again, when the Indian Service reckons 27 officers, the number in the Provincial Service will be 110 to become 109 again when Mr. Tate becomes a member of the Indian Service. In the figures 107, 108, 109 and 110 are included six officers who are admitted on personal grounds. As these are gradually absorbed from one cause or another the service will be reduced by the number so absorbed, until the normal number 104 (or 103) is reached.

13. Of the 5 Inspectors of Schools, 1 is spoken of in the Government of India's (Home Department, Education) letter Nos. 104—115, dated the 23rd July 1896, as "a Joint Inspector of Orissa." This office is now held by Babu Radha Nath Roy, who is styled "Temporary Inspector of Schools." He has been in independent charge for four and-a-half years, and will for the future be designated "Inspector of Schools" simply. Another who comes under this appellation is the "Inspectress of Schools."

14. The distribution of the officers who are to appear in the Provincial Service list is attended with much difficulty: it has been dealt with by Sir Alfred Croft in consultation with Dr. Martin, and the Lieutenant-Governor, after weighing carefully the difficulties connected with individual cases, has placed the officers as shown at the close of paragraph 15 below.

Class I—Presents no difficulty. Rai Radhika Prasanna Mookerjea Bahadur has been permanently in Class IV of the Superior Service since 1885. Rai Dinanath Sen Sahib is the senior officer in the present Subordinate Service (Mr. Phillips being disqualified by his office for the new Classes I and II), and has been acting in Class IV of the Superior Service since 1888.

Classes II and III.—The question of the position of Mr. Billing is involved in considerable difficulty. It is argued that he has been for eight and a half years serving in the former graded service, where his name follows that of Rai Dinanath Sen Sahib, and for the same period has been serving as Principal of a first grade college; further that he draws a salary of Rs. 540 (Rs. 340 as pay and Rs. 200 acting allowance) and is, therefore, too highly paid for Class III (Rs. 500); and lastly that he has been selected by the Secretary of State for the first vacancy arising in the Indian Service. On the other hand, it is to be borne in mind that his permanent post is in Class II of the Subordinate Service, being 11th in the total list of that service. On the former grounds he would appear at the top of Class II (Rs. 600), immediately succeeding Rai Dinanath Sen Sahib; on the latter he would appear in Class III (Rs. 500). Taking all these circumstances into consideration, the Lieutenant-Governor thinks that the question will be most equitably settled by placing him at the bottom of Class II. His position as an officer serving for more than eight years in Class IV of the old graded service and as an officer specially selected for promotion to the Indian Service amply warrants such a place being assigned to him. The first three appointments in Class II will be taken by Mr. J. A. Reuther and Babus Radha Nath Rai and Abinash Chandra Chatterjea, the seniors on the list, who are qualified by their offices for this class.

Class III.—The office held by Mr. A. S. Phillips does not entitle him to promotion above Class III. He will naturally stand at the head of this class, and be followed by Babu Mathura Nath Chatterjea and Shams ul-ulama Abul K. M. Siddiq. The next officer would in regular course be Babu Ambika Charan Bose, and to follow him would come Babu Nilmani Mukherjea, the class being concluded by the name of Mr. Tate, placed in square brackets, *vide* paragraph 3 above. The position of Babu Nilmani Mukherjea has been given special consideration. He is Principal of the Sanskrit College, and his case is thus referred to by Sir Alfred Croft:—

"Babu Nilmani Mukherjea, Principal of the Sanskrit College, has put forward a strong appeal for exceptional promotion, on the ground (1) of the importance of the Sanskrit College compared with the Chittagong College (whose Principal is above him in the graded list); (2) the high pay drawn by Mahamahopadhyaya Mahes Chandra Nyayaratna, C.I.E., his immediate predecessor; (3) the extra duties that the Principal has to discharge in connection with the Sanskrit Title and Sanskrit Tol examinations; and (4) the interest felt by the Hindu community in maintaining the dignity of the College. It is true that the Sanskrit College is

a much more important institution than the Chittagong College. The latter prepares for the F. A. only, while the former sends candidates to the M. A., and the Principal has very important duties connected with the Sanskrit examinations. Both Principals entered the service in the same year, 1857, Babu Nilmani Mukherjea as an M. A., Babu A. C. Chatterjea as a B A. Nilmani Babu has spent all his service in Calcutta, where he has done a good deal of literary work (see History of Services of Gazetted Officers, page 1024); Babu A. C. Chatterjea has spent all his service in Cuttack and Chittagong. It so happened that the latter was drawing higher pay than the former when the graded list was established in 1878, and so he took the higher place The high pay drawn by Mahamahopadhyaya Mahes Chandra Nayayaratna does not, I think, affect the question. He was promoted to the Superior Service by reason of his character and high position as a Sanskrit Scholar, and the pay that he drew as Principal was his personal pay as a graded officer. It has now been decided that the Sanskrit College Principalship is not to be in the Indian Service cadre of appointments. As to the feeling of the Hindu community, I received a letter last year, signed by Maharajas Durga Charan Law, Jotindro Mohan Tagore and Narendra Krishna, Sir Romesh Chunder Mitter, and Dr. Mohendra Lal Sircar, pointing out the importance of the Sanskrit College, and praying that in the reorganised service "a high place, both as regards pay and rank," might be given to the Principal. Lastly, Nilmani Babu draws attention to his age. He is in his second year of extension, and will have little chance of promotion to a higher grade. Babu A. C. Chatterjea is five years younger, and has many chances of promotion.

The chief grievance, it will be seen (putting aside personal and official claims), is the higher position occupied by Babu A C. Chatterjea But I hardly see how it can be remedied. It would be a difficult and invidious matter to disturb the order of seniority in the Education Department, which has been accepted for years Nilmani Babu urges that he can now rise (owing to his age) no higher as Principal of the Sanskrit College, with all its responsibilities, than he would have risen had he remained Professor of the Presidency College. But though Nilmani Babu himself may not rise to the highest class, yet I have proposed that the Principal of the Sanskrit College should be eligible for that class, and it is his own misfortune that he was promoted so late in life. His promotion, however, has not been very slow. He was confirmed in Class II in 1892, and rose to Rs. 400 in 1893. It is proposed to give him Rs. 500 now. Again, his chances of promotion to Rs. 600 are not so bad as he makes out. Rai Kalika Prasanna Mukherjea is in his fourth, and Rai Dinanath Sen in his second year, of extension. Mr. Phillips retires in April next. Maulavi Abul Khair is limited, as Superintendent of a Madrasa, to a salary of Rs. 500 Babu A. C. Bose is in his last year of extension. Babu B. Chakravarti has already retired. Thus, of eleven officers senior to Nilmani Babu, five will have retired in the next two or three years, and one of the remainder cannot rise to Class II. His position would, no doubt, be improved if it were declared that the Principal of a second grade College could rise no higher than Class III, which would debar Babu A C Chatterjea from Class II, in which he is placed by Dr. Martin. But I think this would not be fair. It is proposed that head-masters of Collegiate Schools (like Mr Phillips) should be entitled to rise to Rs. 500, and Principals of first grade Colleges and the Sanskrit College to Rs. 700. It seems reasonable that Principals of second grade Colleges should rise to Rs. 600.

I have dwelt on this question at, perhaps, tedious length, because I promised Nilmani Babu and the Maharajas that his case should be fully submitted to Government. As a matter of policy, the exceptional promotion of the Principal of the Sanskrit College would no doubt be gratifying to the Hindu community, but individual claims cannot be disregarded As what seems to me a fair way of meeting the difficulty, I would suggest that Babu Nilmani's name should immediately follow that of Babu M. N. Chatterjea."

The extract has been given at length, and carefully considered. The Lieutenant-Governor, while fully admitting the distinguished abilities of Babu Nilmani Mukherjea and the importance of the high office which he fills, is yet of opinion that, with due regard to the individual claims of his seniors, it would be improper to give him a place higher than that now assigned to him, viz., immediately after Babu Ambika Charan Bose.

Class IV.—The remarks made by Sir Alfred Croft in reference to individual officers who may be regarded as having a claim to inclusion in this class are the following:—

Babu Ratna Mani Gupta, the next senior officer, has retired from the service. The first three places should, therefore, be taken by Mrs. M. Wheeler (II, 6), Mr. E. R. Tiery (III, 1), and Babu Chandra Mohan Mozumdar (III, 2), who come next in order of seniority (The references are to the Civil List for January 1897, page 179) I turn now to the case of those officers of European qualifications, who have been selected for early and exceptional promotion. They are, in order of seniority, Mr. P. Brühl (1882), Dr P. C. Ray (1889), Mr. J. N. Das Gupta (1890), and Mr. D. N. Mallik (1893). Mr. Brühl (see paragraph 15(*d*) of Dr. Martin's letter) was educated in Germany, and is a specialist in Science of a quite exceptional order. The other three are distinguished graduates of English universities. Mr. Brühl, Dr. Ray and Mr. Das Gupta were recommended by the Bengal Government in 1894 for immediate promotion to Rs. 350, pending sanction of the reorganisation scheme; but the Government of India declined to promote them in anticipation. If they were considered worth Rs. 350

in 1894, I agree with Dr. Martin that they have a claim to Rs. 400 in 1897. Mr. D. N. Mallik is of only three and a half years' standing, and I propose to place him in the class next below (Rs. 300). His case will be considered later on.

Along with graduates of European qualifications have always been reckoned Premchand Roychand students of the University, as entitled to equal promotion with the former. I think this principle should be maintained, as they are the most distinguished students that the University turns out. There is one officer of this class now to be considered, Babu Nilkanta Mazumdar, who was appointed to the department on Rs. 250 in 1879, and has officiated as Principal of the Cuttack College. The seniority and pay of these four officers (excluding Mr. Mallik) are (*vide* Civil List, pages 177, 179)—

	Rs.
Babu Nilkanta Mazumdar, 1879 (No. 3 in Class III) ..	280
Mr. P. Brühl, 1882 (No. 6 in Class III)	300
Dr. P. C. Ray, 1889 (ungraded)	250
Mr. J. N. Das Gupta, 1890 (ungraded)	250

I think that all these officers should be placed in the new Class IV in the above order (subject to the proposal made below with regard to Mr. Ghilardi). This will put Babu Nilkanta Mazumdar in his right place in the order of seniority of the old list, following next after Babu Chandra Mohan Mazumdar.

An appeal has been made to me by Mr. Peller, then Principal of the Presidency College, in favour of Babu Bipin Bihari Gupta, one of the Professors of that institution. He is a distinguished Mathematician, being the only graduate who obtained a First Class at the M. A. examination in that subject from 1874 to 1880. He also competed in 1880, but without success, for the Premchand studentship, taking up Pure and Mixed Mathematics, Chemistry and Physics. No candidate indeed (with one exception) was declared qualified for the studentship in these subjects from 1874 to 1881; and the University at length recognised the fact that they were far too wide, and they have now been divided into six, only one of which need be taken up. I think it beyond doubt that, under the present regulations, Babu Bipin Behari Gupta, as the best Mathematician among the M. A. graduates for six years, would certainly have gained a studentship; and he discharges his duties at the Presidency College with very marked ability. While fully acknowledging his distinguished ability and usefulness, at the same time I regret that I cannot discern any principle by which he could be promoted above the heads of his seniors, all of whom are thoroughly competent and deserving officers. Babu Bipin Bihari's merits and services will soon, I hope, obtain recognition in due course. He is second on the list in Class V, and should rise to Class IV in a short time.

The case of Mr. Ghilardi, Assistant Superintendent of the School of Art, has been separately before the Government,—see correspondence ending with Mr Finucane's No. 531T.G., dated 14th October 1896. Mr Ghilardi has been in the department since March 1886, and draws Rs. 300, ungraded (Civil List, page 177). In Madras the pay of the Assistant Superintendent is Rs. 400 rising to Rs 600, and in Bombay Rs. 500 rising to Rs. 750. Mr. Ghilardi certainly deserves promotion after 11 years' good work, while he has been very highly spoken of by successive Superintendents; and this has been recognised in the Government orders referred to. I should think he might properly take rank with the specialists holding European qualifications whose case has just been considered, and if that be granted, his rank should be in accordance with his seniority. In that case he would come between Mr. Brühl (1882) and Dr. P. C. Ray (1889).

It will be seen that Dr Martin places Mrs. Wheeler, Mr. Tiery, and Babu Chandra Mohan Mazumdar below the five officers whose case has just been considered. I cannot, on reconsideration, support this arrangement, which is based on my earlier proposals of 1894. Mrs Wheeler has occupied her present office, that of Inspectress of Schools, since 1876. As the sole Inspectress, she occupies an important position In Madras there are two Inspectresses (belonging, however, to the European service) drawing, respectively, Rs. 500 to Rs. 600 and Rs. 450 to Rs 500. Mrs. Wheeler is 52 years of age, and deserves consideration towards the end of a long service. Mr. Tiery and Babu Chandra Mohan Mazumdar stand next in seniority, and occupy important offices (Mr. Tiery was an Assistant Inspector before he was selected for the Murshidabad appointment), and should not be passed over without necessity The arrangement that I propose will leave room in Class IV for the five officers with European or Premchand qualifications, and Babu Nilkanta Mazumdar will thus come into his right place, being next below Babu Chandra Mohan Mozumdar in order of seniority.

The Lieutenant-Governor accepts these views.

It is to be observed that the cases of the retired officers, Babus Bireswar Chakravarti and Ratna Mani Gupta, must be taken into consideration up to the dates of their retirement. The positions of these retired officers would be immediately below Babu Ambika Charan Bose and Babu Nilmani

Mukherjea respectively. This will involve some slight changes in the classes below, which can be settled hereafter in communication with the Accounts Department.

Class V.—Sir Alfred Croft's note upon this class is as follows:—

Class V.—The only cases requiring notice in this class are those of officers on fixed pay, whose place in the new list, with respect to graded officers in the old list, it is necessary to settle. They are those of Mr. R. F. Shaw, Head-master of the Apprentice Department-Civil Engineering College, Mr. D. N. Mallik, Assistant Professor, Patna College, Pandit Hara Prasad Sastri, Professor of Sanskrit, Presidency College, and Mr. H. A Stark, Head-master of the Anglo-Persian Department, Calcutta Madrassa (Civil List, page 177). Mr. Shaw (M. A., Aberdeen) was appointed on 20th January 1891 on Rs. 300; Mr. Mallik (B. A., Camb., B. S.C., London) on 12th July 1893, on Rs. 250; Pandit Hara Prasad (M. A., Calcutta) on 28th February 1895, on Rs. 300; Mr. Stark (B. A., Calcutta) on 1st July 1895, on Rs. 300. It has to be determined how they should stand with respect to other officers in the old list. On reconsideration of my previous proposals, I think the method to be followed should be this:—An officer appointed on Rs. 300, which is the maximum pay of Class III, should not be in a worse position than if he had been appointed five years earlier on Rs. 200—20—300, the pay of the class. That is, he should rank next below those who had been *confirmed* in the class five years before the date of his appointment, all of whom at the date of his appointment will have reached the maximum of Rs. 300. He should rank above officers who were only *officiating* in the class five years before his appointment. (The status of a sub. *pro tem.* officer is that of an acting officer.) An officer appointed on Rs. 250 should take rank on the same principle. Since it takes three years to rise in Class III from Rs. 200 to Rs. 260, such an officer should rank next below those who were appointed permanently to the class three years before the date of his appointment, all of whom were on that date drawing Rs. 260. Hence, comparing the dates given above for the purpose of ascertaining each officer's place, Mr. Shaw may be supposed to have been appointed to Class III on 25th January 1886, Mr Mallik on 12th July 1890, Pandit Hara Prasad Sastri on 26th February 1890, and Mr. Stark on 1st July 1890. Referring to the Civil List (page 179), it therefore appears that Mr. Shaw should come immediately before Babu Baroda Prasad Ghose (III, 7) who was appointed on 1st June 1886, and that Pandit Hara Prasad Sastri, Mr. Stark and Mr. Mallik should come in that order immediately before Babu Hari Prasad Banerjea (III, 11), who was appointed to that class on 13th July 1890. [The dates of confirmation of Mr. E. Pegler and Babu S. B. Dutt (III, 8 and 9) seem inconsistent with their position in the class, but it is not really so. These two officers, who had drawn Rs. 250 fixed pay for many years, were transferred to Class III in December 1891, and therefore took rank, exactly in accordance with the foregoing principle, as if they had been appointed to the class in December 1888.]

Sir Alexander Mackenzie accepts the principle thus enunciated, and class V will be fixed accordingly.

Sir Alfred Croft continues:—

"In reference to the position assigned to Mr. D. N. Mallik, it will be convenient at this point to consider what special prospects, in the way of exceptional promotion, are now and hereafter to be offered to those graduates in honours of English Universities whom we wish to attract to the Department, to take the place of men hitherto appointed by the Secretary of State. It has, I think always been understood that special advantages were to be offered them. In 1894 I recommended that all such officers, appointed on Rs. 250, should, after three years, be promoted to the first vacancy arising in the Rs. 350 class; and this proposal was afterwards made the basis of the recommendation above referred to, that Messrs. Brühl, P. C. Roy, and J. N. Das Gupta, should at once be promoted to Rs. 350. The Rs. 350 class has now disappeared, and another method must be adopted. I would propose that a professor of European qualifications or a Premchand student should originally be appointed on Rs. 250; that after a service of three years in that class, he should have a claim to the first vacancy arising in Class V (Rs. 300); and that after a further service of three years in that class, he should have a claim to the first vacancy arising in Class IV (Rs. 400). As vacancies would not generally occur immediately after the expiration of the periods of three years, he would have a fair prospect of rising from Rs. 250 to Rs. 400 in about seven years; and this, I think, would offer sufficient inducement. (In the Provincial Executive Service I see that an officer rises from Rs. 250 to Rs. 500 in from six to seven years.) Candidates of this class who were appointed to the Superior Service under the two-thirds rule, rose from Rs. 333 to Rs. 500 in five years: so that the new men will still be not as well off as their predecessors were. After appointment to Class IV they would be eligible for promotion in their turn under the ordinary rules.

It is of the first importance that graduates in honours of English Universities should be attracted to the Provincial Service; the rule now proposed is therefore approved. It follows that Mr. Shaw is the first officer for promotion.

to Class IV, and that Mr. Mallik's time for such promotion will follow after he has served in Class V for three years from the date of the introduction of this scheme. In working the rule, active service (including privilege leave will alone be reckoned in the qualifying period.

Class VI.—Sir Alfred Croft observes with reference to this class :—

The cases here are those of Babu Kumudini Kanta Banerjea, Dr. P. N. Chatterjea, and Mr. M. M. Ghose (Nos. 7, 13, and 14 in Class VI of Dr. Martin's list), who have been appointed to the department on fixed pay—the first on Rs. 200 in 1887, the next two, who are graduates of English Universities, on Rs. 250 in 1894 and 1895, respectively. The place of Babu Kumudini Kanta Banerjea was fixed in my former list as following that of Miss. C. M. Bose. Dr. P. N. Chatterjea was appointed on the 9th November 1894, and should therefore rank among Class III (old list) officers as if he had been appointed to the class on the 9th November 1891. He will therefore stand after Babu B. K. Guha (III, 14). Mr. M. Ghose, appointed on 22nd June 1895, will rank as from 29th June 1892, and follow Babu Sarada Prasad Ganguli (Babu Uma Kisor Roy, the next on the list, not being a Provincial Officer). Babu Khirod Chandra Rai Chaudhuri (III, 18) has, since the date of Dr. Martin's letter, been transferred to a Provincial appointment, and should therefore come into the list before Babu Sib Chandra Gui. Dr. Chatterjea and Mr. Ghose will be entitled to the first vacancies arising in Class V, after they have served for three years each on their present pay.

The case of Maulavi Abdul Karim, B.A., Assistant Inspector of Muhammadan Education, is exceptional. It will be seen that in the provisional list, recommended in my note of 20th January 1894, I placed Maulavi Abdul Karim next after Shams-ul-ulama Ahmad (VI, 12 in that list, III, 20 in the Civil List, page 180). This was in accordance with the place that he then occupied as a sub. *pro tempore* officer. But in the Civil List for January 1897 (page 181), Maulavi Abdul Karim comes nine places lower down (III, 30). The reason is that he was in 1894, and had been for some years, substantively *pro tempore* in Class III, in place of an officer who had been appointed to the Provincial Service, but whose confirmation in that service was for some reason delayed for many years. In consequence of the rule that substantive *pro tempore* officers take rank below those who have been confirmed, Maulavi Abdul Karim found himself passed over, between 1894 and 1896, by a number of officers promoted from the class below. I think with Dr. Martin that he should take the place twhich I proviously assigned to him in January 1894, and which he would have held had the scheme been sanctioned from about that date In 1894 he had already been substantive *pro tempore* for over four years, and the position now assigned to him is that which he would have taken if confirmed after three years.

The reasons given for regarding Maulavi Abdul Karim's position as exceptional are sound. The argument might be strengthened by the consideration that the post held by him, viz. Assistant Inspector of Muhammadan Education, is a special one. Had this not been so, his confirmation in Class III of the former service would have taken place in regular order as vacancies occurred in the class. Under the circumstances, it is right that his case should receive exceptional treatment.

Sir Alfred Croft, in reserving four posts in this class for graduates in honours of English Universities or Premchand Students, writes thus:—

Of the four reserved appointments, one can be filled up immediately upon my departure, by Mr. Bhupati Nath Das, about whom there has been separate correspondence. He is the man so strongly recommended, as an original worker in science, by Professor Ramsay. The other three may be filled up by substantive *pro tempore* promotions from the class below, until specialists are appointed permanently to the class after the retirement of Messrs. Ewbank and Stack.

Mr. B. N. Das may at once be appointed to one of those reserved appointments, and on the retirement of Mr. Stack in the end of March, a second specialist may be appointed, and similarly another on the retirement of Mr. Ewbank towards the end of April. There will then remain one post which may temporarily be filled up.

Sir Alfred Croft has laid special stress upon the fact that nearly all the officers in this Rs. 250 class are at present drawing more than Rs. 250 a month, and that those on less than Rs. 300 a month would have had a fair prospect of rising to Rs. 300 (as pay under the old system) within a few years by regular increments. He adds:—"For the present I consider that the fair and only possible plan will be to continue to them, as personal allowances, the amounts above Rs. 250 to which they are now, or may become, entitled until all of them are promoted to the next higher class on Rs. 300." This proposal is sanctioned, and will be applicable to those who had already set foot in the former Class III or had drawn increments in the

same; these will, if they revert to Class VII of the Provincial list, continue to draw the increments to which, from time to time, they would have become entitled under the old system. This principle will be extended to all the classes.

Class VII.—Sir Alfred Croft discusses the cases of certain officers who have hitherto been on fixed pay:—

P. W. Byers, Teacher, Apprentice Department, Civil Engineering College; Annada Prasad Bagchi, Head-master, School of Art; Braja Ballabh Dutt, M.A., Lecturer, Rajshahi College; Sivendra Nath Gupta, Lecturer, Krishnagar College.

The last two men have already had their places assigned in my 1894 list. Mr. Byers was appointed on the 23rd March 1894, on a salary of Rs. 200—10—230, and therefore ranks below those who have been confirmed in old Class III, the pay of which is higher (Rs. 200—20—300). Babu Annada Prasad Bagchi was appointed on Rs. 200 on the 3rd January 1880, and therefore ranks above all officers in Class IV (Rs. 150—10—200), the senior of whom was promoted to that class in 1885. At the head of the list I keep two places for Assistant Inspectors, for a reason to be afterwards explained.

In one of the two places referred to by Sir Alfred Croft the name of Babu Kumad Bandhu Bose was entered, and the second place was reserved for an Assistant Inspector of Schools to be newly appointed.

In regard to the position given to three officers, Sir Alfred Croft writes:—

"Babu Rasamay Mitra (No. 23) and Kali Prasanna Bhattacharjea (No. 24) have been acting since November 1895 and January 1896, in the class above, having been specially selected for such promotion (Civil List, page 183). They have, therefore, been placed above Babu Rajeswar Gupta (No. 25), the senior officer for promotion, who has not yet acted in the class above.

This is sanctioned.

Class VIII.—In discussing Class VIII, Sir Alfred Croft has written:—

Class VIII.—The only special cases in this class are those of six officers transferred from fixed pay. But in arranging the names in this class, I have adopted a new method, rendered necessary by the following circumstances: In the first appointment of M. As. as Lecturers in Colleges, it has been the practice to appoint them either to Class V (Rs. 100—10—150) or to fixed pay appointments of Rs. 150, according as one or other kind of appointment happened to be vacant. But it has by no means followed that the officers in Class V, though appointed on lower pay, were in any way inferior to those who were appointed on Rs. 150. Further, those who were appointed to Class V generally received acting or substantive *pro tempore* appointments in the first instance, and were only confirmed after a lapse of time, while officers appointed on Rs. 150 were commonly appointed permanently. Thus, the former class of officers suffered a two-fold disadvantage: firstly, in the rate of initial pay, secondly, in their lower position in the list, that position being determined under the ordinary rule by the date of confirmation. I propose now to reduce this inequality once for all by fixing the position of College Lecturers, whether starting on Rs. 100 in Class V or on Rs. 150, by the date of their first service, whether acting, substantive *pro tempore*, or permanent, provided such service was continuous. And I further recommend that all such officers, whatever their previous designations may have been, should henceforth be uniformly styled Professors."

Sir Alexander Mackenzie approves of this recommendation: it is therefore sanctioned.

To summarize:—At the present time there are 30 out of 137 posts assigned to the Superior Service filled up by Officers of the Indian Service. There remain 107 Officers for the Provincial Service. These will be distributed as follows:—

Class	I	...	...	...	2 Officers.
„	II	...	...	...	4 „
„	III	...	...	...	6 „
„	IV	...	..	...	8 „
„	V	...	...	...	12 „
„	VI	...	...	...	22 „
„	VII	...	...	...	25 „
„	VIII	...	...	...	28 „
			Total	...	107 Officers.

The nominal roll, as now sanctioned, is the following:—

CLASS I (2), Rs. 700.

1. Rai Radhika Prasanna Mukerjee Bahadur.
2. Rai Dinanath Sen Sahib.

CLASS II (4), Rs. 600.

1. Mr. J. A. Reuther.
2. Babu Radhanath Rai.
3. „ Abinash Chandra Chatterjea, B.A.
4. Mr. Billing, M.A.

CLASS III (6), Rs. 500.

1. Mr. A. S. Phillips, B.A.
2. Babu Mathura Nath Chatterjea, M.A.
3. Maulvi Abul Khair Muhammad Siddiq, M.A.
4. Babu A. C. Bose.
5. „ Nilmani Mukerjea.
6. [Mr. W. Tate.]

CLASS IV (8), Rs. 400.

1. Mrs. M. Wheeler.
2. Mr. E. R. Tiery, B.A.
3. Babu Chandra Mohan Mazumdar, M.A.
4. „ Nilkanta Mazumdar, M.A.
5. Mr. P. Bruhl.
6. „ O. Ghilardi.
7. Dr. P. C. Ray, D.Sc. (Edin.).
8. Mr. J. N. Das Gupta, B.A. (Oxon.).

CLASS V (12), Rs. 300.

1. Babu Jagat Bandhu Laha, M.A.
2. „ Bipin Bihari Gupta, M.A.
3. Mr. R. F. Shaw, M.A. (Aberdeen).
4. Babu Barada Prasad Ghose, M.A.
5. Mr. E. Pegler.
6. Babu Sasi Bhusan Dutt, M.A.
7. Maulvi Muhammad Ibrahim, B.A.
8. Pandit Hara Prasad Sastri, M.A.
9. Mr. H. A. Stark, B.A.
10. Mr. D. N. Mallik, B.A. (Camb.), B.Sc. (Lond.).
11. Babu Hari Prasad Banerjea (now Assistant Inspector).
12. Mrs. E. C. W. Stansbury.

CLASS VI (22), Rs. 250.		Draws, Rs.
1.	Sasi Bhusan Sen, B.A., *plus* personal allowance ...	300
2.	Brajendra Kumar Guha, B.A., *plus* personal allowance	300
3.	Dr. Purnananda Chatterjea, B.A., D.Sc., (Edin.) ...	...
4.	Miss Chandra Mukni Bose, M.A., *plus* personal allowance	280
5.	Kumudini Kanta Banerjee, M.A.	.
6.	Saroda Prasad Ganguli (on personal grounds), *plus* personal allowance	300
7.	Mr. Manomohan Ghose, B.A. (Oxon.)	...
8.	Khirod Chandra Rai Chaudhuri, M.A., *plus* personal allowance	300
9.	Sib Chandra Gui, M.A., *plus* personal allowance ...	280
10.	Shams-ul-ulama Ahmad, *plus* personal allowance ...	260
11.	Abdul Karim, B.A., *plus* personal allowance ...	300
12.	Bireswar Chatterjee, M.A., *plus* personal allowance ...	280
13.	E. A. LeFeuvre, *plus* personal allowance ...	260
14.	Ram Das Chakravarti, *plus* personal allowance ...	280
15.	Ambika Charan Mukherjea (on personal grounds), *plus* personal allowance	280
16.	Baikuntha Nath Roy, B.A. (on personal grounds), *plus* personal allowance	260
17.	Mati Lal Maitra	240
18.	Bhuban Mohan Sen, B.A.	240
	Rai Sarat Chandra Das Bahadur, C.I.E. (*on personal grounds*) *seconded*	*300*
19.	Raj Kumar Sen, M.A., sub. *pro tem.*	240
20.	Chandra Kumar Maitra, sub. *pro tem.*	240
21.	Abdul Munim, sub. *pro tem.*	200
22.	Kumud Bandhu Bose, sub. *pro tem.*	240

CLASS VII (25), Rs. 200.

One place reserved for an Assistant Inspector of Schools.

1. P. W. Byers, *plus* personal allowance (draws Rs. 230).
2. Annada Prasad Bagchi.
3. Jagat Bandhu Bhadra (on personal grounds).
4. Bhawani Charan Mukharjea, B.A.
5. Kunja Bihari Bose, M.A.
   H. A. Lane, M.A., *seconded.*
6. Ram Chandra Chatterjea.
7. Braja Ballabh Dutta, M.A.
8. Haranath Bhattacharjea, M.A.
9. Debendra Nath Bose, M.A.
10. Kisori Mohan Sen Gupta, M.A.
11. Upendra Nath Mitra, M.A.
    Dwija Das Dutt, M.A., *seconded.*
12. Kali Pada Bose, M.A.
13. Joges Chandra Ray, M.A.
14. Sivendra Nath Gupta, M.A.
15. Narendra Nath Bose, M.A.
16. Madhu Sudan Rao.
17. Sagar Chandra Chakravarti.
18. Govinda Lall Set, M.A.
19. Mahamahopadhyaya Chandra Kanta Tarkalankar, sub. *pro tem.*
20. Surendra Kumar Bose, B.C.E. sub. *pro tem.*
21. Rassmay Mitra, M.A., sub. *pro tem.*
22. Kali Prasanna Bhattacharjea, M.A., sub. *pro tem.*
23. Rajeswar Gupta, sub. *pro tem.*
24. Rajendra Nath Banerjea, B.A., sub. *pro tem.*
25. Rajmohan Sen, M.A., sub. *pro tem.*

CLASS VIII (28 AT PRESENT), Rs. 150.

Hari Charan Ray, M.A., *seconded.*
1. Chandra Bhushan Bhaduri, B.A.
2. Mukunda Chandra Vidyabagis, M.A.
   Jagadis Chanara Sen, M.A., *seconded.*
3. Aditya Kumar Chatterjea, B.A.
4. Mohini Mohan Chaudhuri, M.A.
5. Bisseswar Sen, M.A.
   Sasi Sekhar Banerjea, B.A. *seconded.*
6. Braja Lal Mukerjea, B.A.
7. Poresh Nath Sen, B.A.
8. Joy Gopal Dey, B.A.
9. Murali Dhur Banerjea, B.A.
10. Harish Chandra Bhattacharjea, B.A
11. Harish Chandra Dutt, M.A.
12. Mohit Chandra Sen, M.A.
13. Satis Chandra Dey, M.A.
14. Binayendranth Sen, M.A.
15. Gopal Chandra Ganguli, M.A.
16. Mohini Mohan Dutt, M.A.
17. Bidhu Bhushan Goswami, M.A.
18. Abdul Ali.
19. Pramatha Nath Mukerjea, M. A., sub. *pro tem.*
20. Rakhal Raj Biswas, M.A., sub. *pro tem.*
21. Ram Prassana Mukherjea, sub. *pro tem.*
22. Sukhbasi Tewari, sub. *pro tem.*
23. Hari Charan Mukherjea, L.E., sub. *pro tem.*
24. Govinda Sastri, sub. *pro tem.*
25. Hriday Chandra Banerjea, sub. *pro tem.*
26. Professor for Rajshahi College, sub. *pro tem.*
27. Professor for Dacca College, sub *pro tem.*
28. Professor for Chittagong College, sub. *pro tem.*

15. The following quotation is also extracted from Sir Alfred Croft's note on the re-organization scheme:—

"Connected with the question of the minimum pay to be given to Professors who have graduated in English Universities, and of the conditions of their promotion thereafter, is another very similar question as to the minimum pay to be given to the holders of certain

appointments. In some cases the officers have to be appointed by the Secretary of State in England; in others, the importance of the office requires that a suitable rate of pay should be secured to the holder.

In most cases of the latter class, the officer so appointed will be of sufficient standing to have reached or passed the proposed minimum; but in the case of the transfer of an officer from the Subordinate to the Provincial Service (as, for example, of a Deputy Inspector to be Assistant Inspector), this condition will not always be realised. In order to meet exceptional cases of selection, the following minima are proposed:—

	Rs.
Principals, 1st grade (including Sanskrit) Colleges ...	400
Principals, 2nd grade Colleges	250
Superintendents of Madrassas	250
Inspectors	400
Assistant Inspectors	250
Personal Assistant to the Director of Public Instruction ...	300
Assistant Superintendent, School of Art	300
Head-master, Kurseong Boarding School	250"

Dr. Martin thinks that this proposal, if sanctioned, will probably lead to embarrassing consequences. At the present time in considering who might be a fit person to succeed to the Principalship of the Rajshahi College which is likely to fall vacant in the near future, he looked through the names of the officers in Class IV with a view to following the rule above, and as Babu Nilkanta Mazumdar has been selected to act as Principal of the Cuttack College, his choice was limited to Dr. P. C. Roy or Mr. J. N. Das Gupta. He sent for Dr. P. C. Roy to tell him that he might possibly be called upon to leave the Presidency College. The intelligence was received with consternation, and Dr. Martin, knowing that Dr. Roy is a distinguished Chemist engaged in original research in the Presidency College, after weighing the *pros* and *cons*, decided that the idea ought to be abandoned. He then considered the case of Mr. J. N. Das Gupta and came to the opinion that being a Professor of English Literature, Mr. Gupta's services at present cannot be transferred to such an office. Consequently at the outset the proposed rule is found to offer difficulties of a serious kind. Attempts may be made to follow a rule of the kind, but the Lieutenant-Governor agrees in thinking that no hard-and-first rule can be laid down in the case of several of the offices referred to. Hitherto, Superintendents of Madrasahs (who are paid from the Mohsin Fund) and Assistant Inspectors of Schools, have always been placed on first appointment to these offices on Rs. 250 a month. This rule may be admitted, and Sir Alfred Croft's proposal may also be accepted, so far as are concerned the Assistant Superintendent of the School of Art and the Superintendent, Apprentice Department, Civil Engineering College, with a minimum pay of Rs. 300 for each, and also for the Head-master of the Kurseong Boarding School, for whom a minimum of Rs. 250 is proposed. Beyond this Sir Alexander Mackenzie is not willing to go. These last three appointments require the services of officers recruited in Europe; but in the case of Principalships of Colleges, the choice of successors is obtainable from among a long line of Professors, to most of whom it would be improper to give undue promotion, on the ground of their being, from circumstances, selected for such an office.

It is, therefore ordered that *minima* are fixed, if there are vacancies in the several classes in the case of the following posts:—

	Rs.
Assistant Superintendent, School of Art	300
Head-master of the Apprentice Department, Civil Engineering College	300
Head-master, Kurseong Boarding School	250
Superintendents of Madrassa	250
Assistant Inspectors of Schools	250

As regards appointments to Assistant Inspectorships, the Director of Public Instruction in recommending for promotion to these posts Deputy Inspectors from the subordinate list should be careful lest by giving such promotion the prospects of Provincial Service officers may be materially injured. It is partly to avoid a complication of this kind that just now a very senior Provincial officer is being put forward for an Assistant Inspectorship of Schools.

16. It is now necessary to decide the question what offices should entitle their holders to rise to the several classes of the Provincial Service. The following proposal is sanctioned:—

Class I (Rs. 700).—Principals of Colleges, including the Sanskrit College, teaching up to the B.A, Standard; Inspectors of Schools; Professors who have obtained degrees in honors from the Universities of Oxford, Cambridge, London, or Dublin, or who have received a European training to an equivalent standard, and the Assistant Superintendent, Government School of Art.

Class II (Rs. 600).—Limit of promotion for the Lady Principal of the Bethune College and for the Inspectress of Schools and the Personal Assistant to the Director of Public Instruction, and for Assistant Inspectors of Schools; also for Principals of Colleges teaching up to the First Arts Standard.

Class III (Rs. 500).—The limit of promotion for the following:—Principals of second grade Colleges (teaching up to the F A Standard), Professors not possessed of European qualifications or an equivalent, Superintendents of Madrasahs, including the Head Maulavi of the Calcutta Madrasah, Head Masters of Collegiate and Training Schools, and Head Master of the Government School of Art: the Lady Superintendent, Dacca Eden Female School, the Head Maulavi of the Calcutta Madrasah and Head Master of the Kurseong Government Boarding School, and the Head Master, Anglo-Persian Department of the Calcutta Madrasah.

Class IV (Rs. 400).—Limit of promotion for Professors in second grade (F.A.) Colleges.

As exceptions to the foregoing limits, it is ordered that Shams-ul-ulama Abul Khair Muhammad Siddiq, M.A, Superintendent of the Dacca Madrasah and Mr. Tiery of the Murshidabad Nawab's Madrasah shall be eligible for promotion to Class II. Maulavi Abul Khair has qualifications English and Oriental, equal if not superior to those of the Assistant Inspectors of Muhammadan Education; while Mr. Tiery was, for several years, an Assistant Inspector of Schools, whence he was transferred to his present appointment, as being conspicuously fitted for it.

17. All College Lecturers, Assistant Professors and Professors in the Provincial Service will, henceforth, be uniformly styled Professors.

18. All Officers in the Provincial Service will be Gazetted Officers.

19. Officers transferred from the Subordinate to Provincial list to fill vacancies in the posts of Head-master of Collegiate Schools, Assistant Inspectors, &c., will, in ordinary cases, be eligible for the minimum salary attaching to the posts which they are called upon to fill.

20. The Lieutenant-Governor now sanctions the introduction of the new scheme with effect from the 1st August, 1896. His Honour observes that, owing to the narrowness of the scale of the Provincial Service, as compared with existing salaries, the prospects of officers in the lower classes are very discouraging. For instance, officers now placed in class VI on Rs. 250 of the service are all in class III (Rs. 200—20—300) of the existing service, and before they can receive any increase of pay, they must rise to the top of class VI and then move slowly to the top of class V. He also observes that the Provincial Services of other provinces are practically devoid of class VIII on Rs. 150. Sir Alexander Mackenzie regrets this state of things, and, with a view to improving the prospects of Provincial Service officers, he proposes at an early date to consider whether something may not be done by assigning a greater number of appointments to some of the intermediate classes.

By order of the Lieutenant-Governor of Bengal,

M. FINUCANE,

Secretary to the Govt. of Bengal.

HOME DEPARTMENT.

NOTIFICATIONS.

PUBLIC.

Calcutta, the 26th March, 1897.

No. 451.—Under the provisions of section 9 of the Statute 24 and 25 Victoria, Cap. 67, the Governor General in Council is pleased to direct that His Excellency's Council shall assemble at Simla in the jurisdiction of the Lieutenant-Governor of the Punjab.

ESTABLISHMENTS.

The 20th March, 1897.

No. 273.—The services of Captain D. J. C. Macnabb, I.S.C., an Officiating Deputy Commissioner in Burma, are placed temporarily at the disposal of the Chief Commissioner of the Central Provinces.

The 25th March, 1897.

No. 303.—Mr. G. W. Rivaz has been permitted to resign Her Majesty's Indian Civil Service, with effect from the 21st January 1897.

The 26th March, 1897.

No. 308.—The Honourable Mr. H. E. M. James, of the Indian Civil Service (Bombay establishment), is placed on special duty in connection with the Indian Famine Charitable Relief Fund, with effect from the 23rd instant.

No. 311.—The services of Mr. T. Millar and Lieutenant H. C. Beadon, Assistant Commissioners in the Punjab, are placed temporarily at the disposal of the Chief Commissioner of the Central Provinces.

MEDICAL.

The 23rd March, 1897.

No. 206.—The services of Surgeon-Captain A. E. Roberts, M.B., I.M.S. (Bengal), are replaced at the disposal of the Government of the North-Western Provinces and Oudh, with effect from the 4th March 1897.

No. 214.—Surgeon-Major R. H. Charles, M.D., M.CH., F.R.C.S.I., Professor of Surgical and Descriptive Anatomy in the Medical College, Calcutta, and *ex-officio* 2nd Surgeon to the College Hospital, is granted furlough on medical certificate for twelve months, with effect from the date on which he may avail himself of it.

No. 215.—Surgeon-Lieutenant-Colonel J. Lowtas, M.D., Civil Surgeon of Chittagong, is appointed to officiate as Professor of Surgical and Descriptive Anatomy in the Medical College, Calcutta, and *ex-officio* 2nd Surgeon to the College Hospital, during the absence on furlough on medical certificate of Surgeon-Major R. H. Charles, M.D., M.CH., F.R.C.S.I., or until further orders.

The 25th March, 1897.

No. 234.—Surgeon-Colonel J. H. Newman, M.D., I.M.S. (Bengal), is appointed to officiate as Inspector-General of Civil Hospitals, Bengal, during the absence of Surgeon-Colonel G. L. Ross, on furlough on medical certificate, or until further orders.

The 26th March, 1897.

No. 238.—The services of Surgeon-Captain J. Chaytor-White, M.D., C.M., I.M.S. (Bengal), are placed permanently at the disposal of the Government of the North-Western Provinces and Oudh.

No. 241.—The services of the undermentioned officers are placed temporarily at the disposal of the Government of Bombay for employment on plague and famine duty, with effect from the dates on which they respectively assumed charge of their duties :—

Surgeon-Lieutenant A. Gwyther, M.B., C.M., I.M.S. (Bengal).
Surgeon-Lieutenant R. F. Standage, I.M.S. (Bombay).
Surgeon-Lieutenant H. A. F. Knapton, I.M.S. (Bombay).
Surgeon-Lieutenant W. W. Clemesha, M.B., B.S., I.M.S. (Bengal).
Surgeon-Lieutenant Krishnaji Vishnoo Kukday, I.M.S. (Bombay).
Surgeon-Lieutenant H. A. D. Dickson, I.M.S. (Bengal).

SANITARY.

The 22nd March, 1897.

No. 1033.—In exercise of the powers conferred by section 2, sub-section (1), of the Epidemic Diseases Act (III of 1897), the Governor General in Council is pleased to prohibit the bringing of used apparel and bedding (except when carried as the personal baggage of travellers), rags, waste paper and used gunny bags, from the territories administered by the Governor of Bombay in Council including Sind into any other part of British India.

The 26th March, 1897.

No. 1093.—The following documents regarding quarantine and trade restrictions imposed in Foreign Countries in consequence of the existence of bubonic plague in India are published for general information :—

Quarantine notice, issued by the Norwegian Government.

Justice and Police Department
of the Norwegian Government.
Christiania, February 5, 1897.

Under date of the 1st instant, the following Royal Proclamation has been drawn up :—

"With reference to section 2 of the Quarantine Law of the 12th July, 1848, notice is hereby given, that ports in Arabia, Persia, and British India ('Forindien'), together with Formosa,

and the Pescadores in Eastern Asia, shall, until further notice, be regarded as infected with the Oriental pest; and that in compliance therewith, the regulations concerning quarantine against the pest contained in the abovenamed law, are to be immediately enforced, to which all persons concerned are required obediently to conform"

This is hereby made known in order to draw attention to the fact that at present unloading quarantine can only be performed at Christiania and Quarantine Station—see section 8 in the Quarantine Law of the 12th July, 1848, and section 11 in the Quarantine Regulation of the 10th February, 1849.

A number of copies of this Circular are herewith enclosed.

F. HAGERUP.
L. ESMARCH.

The British Consulate-General, Christiania.

Regulation issued by the Roumanian Government respecting the importation of waste paper.

Bucarest ce $\frac{28 \text{ Janvier,}}{9 \text{ Février,}}$ *1897.*

Le Département des Affaires Etrangères s'empresse de porter à la connaissance de la Légation Royale que le Conseil des Ministres, sur l'avis du Conseil Supérieur Sanitaire et conformément à l'Art. 162 de la loi sanitaire, a pris la décision d'interdire l'importation en Roumanie du papier maculature sale, des jaurnaux usés (qui ont été lus) et de toute sorte d'imprimés salis introduits comme maculature.

Cette décision contenue dans le Journal du Conseil des Ministres No 13 est entrée en vigueur à partir du $\frac{23 \text{ Janvier,}}{4 \text{ Février,}}$ 1897.

Regulations respecting Quarantine at Antwerp.

(Translation.)

Precautions to be taken at the Sanitary Station at Doel in the cases of all vessels (including those having clean bills of health) coming from infected ports, whether they have touched at intermediate ports or not.

Indirect Arrivals.

1. Disinfection of all latrines and urinals, and such other parts of the ship as may be deemed necessary.

2. The bilge water shall be pumped out, and a fresh supply of drinking water taken on board.

3 The Sanitary Officials shall inspect the list of passengers and the crew list and examine every person on board.

If it shall be found that any of the persons who left the port of origin with the vessel are no longer on board, satisfactory proof shall be demanded that they did not leave the ship on account of any epidemic or contagious disease.

4. The ship's manifest shall be submitted to the Sanitary Inspector, in order that he may ascertain that there are no goods on board of a suspicious nature or of which the introduction is forbidden.

In order to facilitate the carrying out of these measures, vessels can, if necessary, be detained at the Sanitary Station during one tide.

Any vessels having on board no merchandise of a suspicious or prohibited nature, can be exempted from detention, if a duly signed copy of her manifest has, five days before arrival, been forwarded to the President of the Sanitary Commission, and if they are able to produce a certificate (in duplicate) of the Sanitary Authorities of a port of call, free of any contagious disease, stating:—

(*a*) That measure for disinfection, similar to those described in provisions 1 and 2, have been carried into effect.

(*b*) That no person on board has suffered from any contagious disease during the whole voyage, if the duration thereof shall have been at least twelve days between the last infected port visited and the port at which the certificate is granted.

If the above conditions shall have been fulfilled, the Master must slacken speed at Doel to permit the quarantine boat to come alongside. The duplicate bills of health shall be delivered to the Sanitary Inspector; one of these shall be retained by him, and the other, after having been dated and stamped, will be returned to the Master, who shall deliver it to the Customs Authorities on his arrival in the port.

The greater number of countries having taken effective quarantine measures with regard to all goods coming from the plague-stricken districts of India, vessels arriving at Antwerp from healthy ports need undergo no special sanitary formalities.

At the same time certificates of origin must be produced for any suspicious or prohibited goods arriving even from a healthy port.

Merchandise.

A. Merchandise of which the introduction is forbidden even in transit—

1. Green hides, salted or pickled, raw hides, hoops, etc., fresh animal matter, etc.

(Exception is made in the case of salted green hides which have been treated with arsenic which are admitted for sale in Belgium.)

2. Wearing apparel, bedding, used or unused.

3. Old or new carpets, woollen goods, used or unused, silk stuffs.

4. Peacock feathers and small articles, imported retail, which might carry the germs of infection.

5. Bottles of liqueur and perfumes, imported retail.

6. Dress goods, drill, etc., not packed in compressed bales and secured with hoops.

7. Samples of raw wool, cotton, and jute, if not compressed and bound with hoops.

The goods mentioned in Nos. 2, 3, 4, 6, and 7 can be admitted after having been disinfected by the apparatus at the Doel Sanitary Station.

B. Merchandise admitted in transit but not for sale in Belgium—

1. Raw wool in pressed bales bound with hoops.

2. All dress goods and drill stuffs packed in pressed bales and bound with hoops.

The Sanitary Authorities can, however, order the bales to be sprinkled with disinfectant before they are unloaded from the vessel.

Antwerp, February 6, 1897.

Telegram, dated the 19th March 1897.

From—The Secretary of State, London.

To—The Viceroy, Calcutta

Marseilles. My telegram* of yesterday. Undressed leather, raw hides, rags, animal matter, wool, prohibited even in transit. Oilseeds and coprah, whether in bag or bulk, carpets to be disinfected. If there has been no sickness on board or death during voyage, passengers undergo medical visit and disinfection before landing. Steamers with interdicted cargoes for English ports discharge other cargo in quarantine. Roumania. My telegram of 24th† February last, sacks from India transhipped at British ports allowed enter Sulina and Constanza after disinfection.

No. 1101.—The following rules for quarantine against plague, which have been made by the Chief Commissioner of Burma with the previous sanction of the Governor General in Council, are published for general information.

The rules have effect from the 15th March 1897 in the Ports of Rangoon, Akyab, Moulmein and Bassein as a temporary measure :—

I.—The commander of every vessel, including junks or other native craft, arriving from Goa, shall, on arrival, at the pilot station, hoist a yellow flag and indicate by signal the port from which she has come.

II.—Such commander shall not, except as hereinafter provided, allow any communication either with the shore or with any other vessel or boat except with the boat supplying a pilot and in that case communication shall be limited to receiving on board the pilot, his servant, if any, and baggage.

III.—The pilot shall not take such vessel higher than Elephant Point, the Stone pier, Lower Anchoring creek or Takaing, as the case may be, but shall anchor it there until the Health Officer of the Port has visited it and ascertained by enquiry from the commander whether any person on board is suffering, or has during the voyage suffered, from plague If the Health Officer is satisfied by such enquiry that no person on board is suffering, or during the voyage has suffered, from plague, the Health Officer *may*, by writing under his hand to be delivered to the commander, permit such vessel to haul down the yellow flag and proceed upwards in the port and hold free communication with the shore and with vessels and boats in port. Provided that, if the vessel has undergone since leaving Goa a quarantine, which is properly proved, for not less than eight days at Colombo, or some other British Port, the Health Officer *shall* grant such permission as aforesaid.

If the vessel has not undergone eight days' quarantine at Colombo, or some other British port since leaving Goa, the Health Officer *may* direct the commander to take the vessel to the quarantine anchorage and there to remain for a period of eight days from the date of arrival in the harbour. In such case the Health Officer shall also direct the commander to prohibit, during the period for which the vessel remains at the quarantine anchorage as aforesaid, all communication, except such as is hereinafter provided for between such vessel and the shore, or other vessels and boats in the harbour.

IV.—If the Health Officer shall have reason to believe at the time when the vessel arrives in the harbour that any person on board is suffering, or during the voyage has suffered, from plague, he shall direct the commander to take the vessel to the quarantine anchorage as aforesaid, and there to remain for a period of fifteen days from the day of arrival in the harbour; and shall further direct that during such fifteen days intercourse between the said vessel and the shore or other vessels and boats in the harbour shall be prohibited as provided in Rule III.

V.—If during the period a vessel is at the quarantine anchorage aforesaid any case or cases of plague should occur on board, the said vessel shall remain in quarantine for a period of fifteen days from the date of the last case occurring, and be subject to all the prohibitions provided for in Rules III and IV.

VI.—When any vessel has been placed in quarantine as aforesaid, the Health Officer may direct the removal of so many of the passengers and crew as may not be suffering from illness, and whose services may not be required on board the veesel, to such particular spots as may from time to time be selected by the Chief Commissioner as places of quarantine, there to remain for a period of eight days, or, if the vessel has been placed in quarantine for fifteen days, for a period of fifteen days. If a case of

plague occurs among such passengers and crew during any such period, they shall remain in a place of quarantine for a period of fifteen days from the date of the occurrence of the last case of such illness.

VII.—Any mails or cargo which may be brought by any vessel so arriving shall be landed under such precautions as the Health Officer may deem necessary to prevent the spread of the disease.

VIII.—It will be the duty of the Conservator of the Port to facilitate the conveyance to all vessels in quarantine of such supplies of provisions, stores, and other articles as may be required by those on board. Such supplies will be placed on the boats of the vessels in quarantine to be subsequently removed by members of their crews.

IX.—All vessels arriving at Rangoon, Akyab, Moulmein or Bassein which may have communicated with any vessel coming from Goa shall be subjected to the same quarantine as vessels arriving at those ports from Goa unless the communication was held after the vessel from Goa was released from quarantine.

JUDICIAL.

The 20th March, 1897.

No. 286.—The Honourable Mr. Justice Gordon having tendered the resignat ion, as from the 1st April, 1897, of his appointment as an Officiating Judge of the High Court of Judicature at Fort William in Bengal, *vice* the Honourable Sir H. T. Princep, the Governor General in Council is pleased, under the provisions of the Indian High Courts Act, 1861 (24 and 25 Vict., Cap. 104), section 7, to appoint Mr. J. F. Stevens, Indian Civil Service, Judicial Commissioner of the Central Provinces, to officiate as a Judge of the said Court from the said date until further orders.

No. 411—46-10.—In exercise of the power conferred by section 102, sub-section (1), of the Indian Emigration Act (XXI of 1883, as amended by Acts XVIII of 1890 and VII of 1897), the Governor General in Council is pleased to declare that, on and from the date of this Notification, a native of India who departs by sea from the port of Negapatam in British India under an agreement to labour for hire in the State of Sarawak, shall not be deemed to emigrate within the meaning of the said Act.

DENZIL IBBETSON,
Secretary to the Government of India.

FOREIGN DEPARTMENT.

NOTIFICATIONS.

Fort William, the 23rd March, 1897.

No. 1137-I. B.—Whereas the Chiefs of Nawanagar, Dhrol and Rajkot and the Talukdars of Jália and Pál have ceded to the British Government the civil and criminal jurisdiction exercised by them within the lands which lie within their respective territories and are occupied or may hereafter be occupied by the Jamnagar-Rajkot Railway (including the lands occupied by stations, outbuildings, and for all other railway purposes) ; and whereas the Governor-General in Council has now full jurisdiction within the aforesaid lands : In exercise of this jurisdiction, and of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act (XXI of 1879), and of all other powers enabling him in this behalf, the Governor-General in Council is pleased to issue the following orders :—

PART I.

(1) The provisions, so far as they may be suitable and as amended by subsequent enactments, of the Acts mentioned below are hereby declared to apply to the aforesaid lands, namely :—

Act XLV of 1860 (The Indian Penal Code).
Act VI of 1864 (The Whipping Act).
Act I of 1871 (The Cattle Trespass Act, 1871).

Act I of 1872 (The Indian Evidence Act, 1872).
Act X of 1882 (The Code of Criminal Procedure, 1882).

(2) The Code of Criminal Procedure, 1882, shall be subject, in its application to the aforesaid lands, to the following modifications, namely :—

(*a*) Trials before the Court of Session may, in the discretion of the Sessions Judge, be without a jury or the aid of assessors.

(*b*) Sentences of transportation or imprisonment for more than seven years passed by the Court of Session shall be referred for confirmation to the Governor of Bombay in Council. In any case so referred the Governor of Bombay in Council may either confirm the sentence or pass any other sentence warranted by law, or may annul the conviction and order a new trial on the same or an amended charge, or may acquit the accused person.

(*c*) Appeals from Magistrates of the second class shall lie to the Court of Session and not to the District Magistrate.

(3) For the purpose of facilitating the application of the provisions of the enactments hereby applied, any Court within the aforesaid lands may construe them with such alterations, not affecting the substance, as may be necessary or proper to adapt them to the matter before the Court.

PART II.

For the purposes of the exercise of criminal jurisdiction within the aforesaid lands, the following arrangements shall be made namely :—

(1) The Assistant Political Agent in Halar for the time being, and the Deputy Assistant Political Agent in Halar for the time being, shall respectively exercise the powers of a District Magistrate and a Magistrate of the first class as described in the Code of Criminal Procedure, 1882.

(2) The Criminal Court of the Political Agent in Kathiawar as constituted for the time being and the Governor of Bombay in Council, shall respectively exercise the powers of a Court of Session and a High Court as described in the Code of Criminal Procedure, 1882, in respect of all offences over which jurisdiction is exercised by the said Magistrates : Provided that, subject to the general control of the said Governor in Council, the said Political Agent's Court shall also exercise the powers of a High Court as described in Chapter XXXII of the said Code of Criminal Procedure, 1882, in respect of the proceedings of the said Magistrates.

(3) This part of this notification applies to all proceedings except—

(*a*) proceedings against European British subjects or persons jointly charged with European British subjects ; and

(*b*) proceedings pending at the date of this notification ;

which shall be carried on as if this notification had not been issued.

PART III.

For the purposes of the exercise of civil jurisdiction within the aforesaid lands, the following arrangements shall be made, namely—

(1) The Court of the Political Agent in Kathiawar for the time being, the Assistant Political Agent in Halar for the time being, and the Deputy Assistant Political Agent in Halar for the time being, shall respectively exercise within or in respect of the aforesaid lands the same civil jurisdiction as is exercised by them within the limits of the Kathiawar Political Agency under the rules for defining the jurisdiction, original and appellate, to be exercised by the Civil Courts of the Political Agency in Kathiawar published at page 312 of the Kathiawar Agency Gazette, dated the 27th December, 1883.

(2) In the administration of civil justice within or in respect of the aforesaid lands, the rules referred to in the last foregoing paragraph and the Code of Civil Procedure (Act XIV of 1882), so far as they may be suitable and as amended by subsequent rules or enactments, as the case may be, shall be taken as general guides.

(3) This part of this notification applies to all proceedings except proceedings pending at the date of this notification, which shall be carried on as if this notification had not been issued.

No. 1138-*I.-B.* — In exercise of the powers conferred by sections 4 and 5 of the Foreign Jurisdiction and Extradition Act (XXI of 1879) and of all other powers enabling him in this behalf, the Governor-General in Council is pleased to direct that, in the Notifications of the Government of India in the Foreign Department cited in the margin and relating to jurisdictional arrangements within the limits respectively of the Bhaunagar-Gondal-Junagar-Porbandar Railway and the Morvi State Railway, so much as refers to the Indian Railway Act (IV of 1879), the Bombay District Police Acts (Bombay Act VII of 1867 and Bombay Act IV of 1890), the appointment of a Superintendent of Railway Police, and the investiture of such Superintendent of Railway Police and of the Political Agent in Kathiawar with powers as described in the Bombay District Police Act, 1890, is hereby cancelled.

(1) No. 108 I.-J., dated the 18th May, 1881, as amended by Notifications No 2904-I., dated the 31st July 1884, No. 65-I., dated the 7th January, 1886, and No. 3342-I., dated the 10th October, 1895.
(2) No. 3817-I., dated the 25th September, 1888, as amended by Notification No. 3344-I., dated the 10th October, 1895.
(3) No. 3904-I., dated the 21st November, 1890, as amended by Notification No. 3345-I., dated the 10th October, 1895.
(4) No. 3909-I., dated the 1st November, 1894.
(5) No. 3902-I., dated the 21st November, 1890, as amended by Notification No. 3346-I., dated the 10th October, 1895.

The 24th March, 1897.

No. 519-G.—With effect from the 10th February, 1897, Captain P. Z. Cox, Indian Staff Corps, is confirmed in the appointment of First Assistant to the Governor General's Agent at Baroda, and Lieutenant F. deB. Hancock, Indian Staff Corps, in that of Assistant in charge of the Amreli Mahals.

No. 522-G.—The Governor-General in Council is pleased to recognise the appointment of Mr. W. Bleeck as Acting Consul for Germany at Calcutta, during the absence of Mr. O. Schmidt-Ernsthausen.

No. 526-G.—Captain F. W. P. Macdonald, Indian Staff Corps, Political Assistant of the 1st class, is appointed, on return from leave, to officiate as a Political Agent of the 3rd class, and is posted as First Assistant to the Governor-General's Agent in Baluchistan, with effect from the 18th March, 1897.

No. 578-E.B.—The services of Major B. B. Russell, R.E., are replaced at the disposal of the Military Department, with effect from the 18th March, 1897.

The 25th March, 1897.

No. 537-G.—The services of Captain E. W. S. K. Maconchy, D.S.O., Indian Staff Corps, 4th Sikh Infantry, are placed temporarily at the disposal of the Government of the Punjab.

No. 543-G.—The Governor-General in Council is pleased to recognise the appointment of Mr. G. H. Boner, as Acting Consul for Germany at Karachi, during the absence of Mr. August Thoele.

No. 549-G.—Captain C. H. Pritchard, Indian Staff Corps, Officiating Political Agent of the 3rd class, is posted as Assistant Commissioner of Ajmere, with effect from the date of assuming charge.

No. 552-G.—Mr. C. E. Biddulph, Assistant Commissioner of the 1st class (seconded) in the Hyderabad Assigned Districts, is granted furlough for one year, on medical certificate, under Article 340 (*a*) of the Civil Service Regulations, with effect from the 31d March, 1897.

No. 554-G.—The privilege leave granted to Lieutenant C. T. Ducat, Indian Staff Corps, Officiating Political Assistant of the 1st class, and First Assistant to the Political Resident in the Persian Gulf, in Notification No. 1852-G., dated the 21st November, 1896, is extended by six days.

No. 1165-I.A.—In exercise of the powers conferred by sections 8 and 9, respectively, of the Indian Christian Marriage Act (XV of 1872), the Governor-General in Council is pleased—

(*a*) to appoint the Reverend Govind Ram, the Reverend Nathaniel Das, the Reverend Lal Chand and the Reverend Silas Paul, of the Baptist Church, to be Marriage Registrars within the Native States of Patiala and Nalagarh, and

(*b*) to grant licenses to the said Reverend Govind Ram, Reverend Nathaniel Das, Reverend Lal Chand and Reverend Silas Paul, authorizing them to grant certificates of marriage between Native Christians within the said States.

The 26th March, 1897.

No. 1188-I.B.—In exercise of the powers conferred by the Notification of the Government of India in the Foreign Department, No. 3631-I., dated the 21st September, 1892, the Governor-General in Council is pleased to direct the transfer of the following Civil Appeals pending before the First Assistant Resident at Hyderabad, by virtue of his jurisdiction over the Cantonment of Secunderabad, to the Civil and Sessions Judge, Hyderabad Assigned Districts :—

MERCHANT SHIPPING.

Calcutta, the 24th March 1897.

No. 1360-*S.R.*—Under the provisions of Sections 65 and 89 of the Merchant Shipping Act (57 and 58 Vic., chap. 60) the Governor General in Council is pleased to direct that the forms referred to in the Memorandum of the Board of Trade and General Order of Her Majesty's Commissioners of Customs set forth below shall be adopted in British India for the registry of British ships under the said Act, with effect from the 1st April 1897.

A supply of the forms can be obtained on application at Calcutta, Madras, and Bombay from the Port Officer, and at any other port from the officer appointed by the local Government to be a Registrar of British Ships at that port.

(1) Memorandum of the Board of Trade, dated July 1896, No. 547.

It has been thought expedient to make alterations in certain of the forms used in connection with the registry of British ships. The forms so altered have, in accordance with section 65 of the Merchant Shipping Act, 1894, been prescribed by the Commissioners of Customs with the consent of the Board of Trade, and public notice of the alterations has been given by the Commissioners in the United Kingdom.

As the section quoted above requires the prescribed forms to be used by all Registrars of Shipping, and as section 89 of the Act provides that the Governor of each British Possession shall occupy the place of the Commissioners of Customs in matters relating to the Registry of Ships, it is necessary that notices, somewhat similar to those issued in the United Kingdom by the Commissioners of Customs, should be issued in the British Possessions.

A copy of the Notice issued by the Commissioners, and a copy of their General Order ($\frac{19}{1896}$) upon the subject are enclosed, and it is suggested that in framing similar notices and instructions in British Possessions the 1st January, 1897, would be a convenient date for bringing the new forms into use.

No alteration involving any question of principle affecting the registry of ships has been made, the old forms and the new being practically the same. It would, therefore, be advisable that any notice of the kind proposed should be so framed as not to invalidate any old form which may be inadvertently used after the date upon which the new forms come into use.

Copies of the new forms Nos. 1 to 18A are enclosed, and a supply of these forms for use can be obtained on application in the usual manner.

(2) General Order No. $\frac{19}{1896}$ dated 5th May 1896, by the Commissioners of Customs, referred to above.

With reference to Section 65 of the Merchant Shipping Act, 1894, 57 and 58 Vict, C. 60, and to General Order $\frac{160}{1894}$, the Commissioners have now, with the consent of the Board of Trade, prescribed the Forms specified in Part I of Schedule II of the above Act. They have, also with the consent of the Board of Trade, approved of the revision of the Forms specified in Part I, Schedule of the above Act.

The following List embraces the Forms in question, *viz.*:—

Form No. 1. Certificate of Survey.

2. Declaration of Ownership by individual. Resident or non-resident Owner or Transferee a natural born subject.

Form No. 3. Declaration of Ownership by individual. Owner or Transferee resident in Her Majesty's Dominions (naturalized subject, etc.).

„ 4. Declaration of Ownership by individual. Owner or Transferee *not* resident in Her Majesty's Dominions (naturalized subject, etc.).

„ 5. Declaration by Joint Owners or Transferees attending together.

„ 6. Declaration by a Joint Owner or Transferee.

„ 7. Declaration of Ownership (special cases).

„ 8. Declaration of Ownership on behalf of a Body Corporate.

„ 9. Certificate of British Registry.

„ 10 Bill of Sale.

„ 11. Mortgage (to secure Principal Sum and Interest).

„ 12. Mortgage (to secure account current, etc.).

„ 13. Declaration by Representative of a deceased Owner or Mortgagee taking by transmission.

„ 14. Declaration of Ownership or Interest on transmission by Bankruptcy.

„ 15. Declaration on transmission by marriage.

„ 16. Certificate of Mortgage.

„ 17. Certificate of Sale.

„ 18. Revocation of Certificate of Mortgage or Sale.

„ 18*a* Provisional Certificate.

The Forms now prescribed are to be adopted in the British Islands on and after the 1st July next Any of the previous Forms remaining on hand on that date are to be treated as waste paper. A supply of the Forms No. 2 to No 18, inclusive, can be obtained on application in the usual manner to the 2nd Division of the Secretary's Office Form No 1, Certificate of Survey, and No. 18*a*, Provisional Certificate, which are not in use by Officers of this Department, will be obtained, kept, and issued by the Board of Trade.

A copy of the enclosed Notice which has been prepared in accordance with Paragraph 2 of Section 65 of the Merchant Shipping Act, 1894, is to be posted up at all places where Registry transactions may take place.

SEPARATE REVENUE.

STAMPS.

NON-JUDICIAL.

PUBLIC WORKS DEPARTMENT.

NOTIFICATIONS.

Calcutta, the 20th March, 1897.

No. 132.—With reference to Public Works Department Code, Volume I, Chapter II, paragraph 81, and Notification No. 42, dated the 28th January, 1897, it is hereby notified that the Entrance examination qualifying for admission to the Superior Accounts Branch of the Public Works Department will be held this year on the 22nd November and five following days.

The 22nd March, 1897.

No 133.—With reference to Foreign Department Notification No. 473, dated the 17th March, 1897, the services of Mr. F. St. G. M. Smith, Executive Engineer, 2nd grade, are replaced at the disposal of the Agent, Governor General for Rajputana and Central India.

The 23rd March, 1897.

No. 134.—With reference to Public Works Department Notification No. 144, dated the 11th April, 1895, Mr. M. S. S. O'Connor, in class III, grade 4 (sub. *pro tem.*), of the Superior Revenue Establishment of State Railways, Traffic Department, is confirmed in his appointment as Assistant Traffic Superintendent in class III, grade 4, of that establishment, with effect from the 1st February, 1895.

No. 135.—The services of Lieutenants L. H. Close, R.E., Executive Engineer, 4th grade, temporary rank, Military Works Department, and G. R. Pridham, R.E., Officiating Assistant Engineer, 2nd grade, Military Works Department, who have been temporarily deputed to the Public Works Department for employment on Famine Relief Works, are placed at the disposal of the Government of Bengal.

The 24th March, 1897.

No. 136.—Mr. W. H. H. James, District Traffic Superintendent in class II, grade 4, of the Superior Revenue Establishment of State Railways, is appointed to officiate as Traffic Superintendent, Eastern Bengal State Railway, in class I of that establishment during the absence of Mr. C. L. Biscoe, on privilege leave, or until further orders.

No. 137.—That portion of Public Works Department Notification No. 85, dated 20th February, 1897, which relates to Lieutenant G. T. Scott, R.E., is hereby cancelled.

No. 138.—Rai Sahib Bidhu Bhusan Biswas, Assistant Engineer, 2nd grade, North-Western Provinces and Oudh, on furlough, is permitted to retire from the service, with effect from the 1st April, 1897.

The 25th March, 1897.

No. 139.—In exercise of the powers conferred by section 7 of the Indian Telegraph Act (XIII of 1885), the Governor General in Council is pleased to direct that, for Rules 48 (and note), 59, 61, 64, 76 (paragraph 1), 92, 98, 108, 120, 121 and 122 in section II of the rules published under the Notification of the Government of India in the Public Works Department, No. 214, dated the 10th June, 1891, the following shall, with effect from the 1st April, 1897, be substituted, namely:—

Rule 48.—Deferred telegrams are not transmitted till the wires are clear of Urgent and Ordinary telegrams but they are delivered by messengers between day-break and 9 P.M. (local time).

Rule 59. Free Delivery.—Telegrams are delivered free of charge within five miles of a Telegraph Office. Beyond the free delivery circle, telegrams will be sent by post without charge or by such other means as the Sender may arrange and pay for (Rule 100).

Rule 61. Reply given to messenger.—Save in the case of a postman delivering a telegram in the ordinary course of postal delivery, the messenger, who delivers a telegram, may be entrusted with the Reply, provided he be not detained for this purpose more than five minutes. The fact of the Reply having been given to the messenger, and the amount paid to him, should be mentioned on the receipt given for the original telegram.

Rule 64. Undelivered telegrams.—When a telegram cannot be delivered, the office at destination sends a Service telegram to that effect and the Sender is informed.

Rule 76. Delivery by boat.—When an Inland telegram has to be delivered on board a ship, which cannot be reached without a boat (*i.e.*, when the ship is not alongside a wharf, pier, or jetty) or at a place which cannot be reached without a boat, the Sender must prepay boat-hire, otherwise the telegram will be handed to the Post Office by the Terminal Telegraph Office for delivery at the Sender's risk. The indication (*Bpd*) (Boat-hire paid) or (*Bpdn*) (Boat-hire paid double, if the Sender wants the telegram sent on board at night) should be entered before the address (in the space marked *Official Instructions*). Boat-hire prepaid, but not expended, will be refunded on application being made by the Sender to the *Superintendent, Check Office, Government Telegraph Department, Calcutta.*

Rule 92.—The Sender of a telegram can require that a notice shall be telegraphed to him of the date and hour of its delivery. He should write on the form (in the space marked *Official Instructions*) the instructions (C. R.) as in Rule 10 (*d*). The charge for such notice or acknowledgment is one rupee. This Advice of Delivery may be addressed to him at any place he may name.

Rule 98.—Telegrams addressed to places where there are no Telegraph Offices can be sent to destination according to the Sender's request by post. Telegrams can also be sent by such other means as the Sender may arrange and pay for.

Rule 108.—Charges, etc.,—The word *Semaphoric* should be written on telegrams (in the space marked *Official Instructions*) to be so signalled to ships. The charge for Semaphoric telegrams is the usual charge plus a fixed fee of eight annas. In case of Semaphoric telegrams addressed to ships, the charges must be paid by the Sender; in case of such telegrams received from ships, the charges must be paid by the Addressee before delivery.

Rule 120.—If through the fault of any Telegraph Administration in India a Private telegram of any class be not delivered, or in the case of Urgent and Ordinary telegrams be subjected to serious delay, the whole charge made for it will be returned to the Sender.

Rule 121.—If a Private telegram be delivered wholly or partially in an unintelligible state, a refund will be made only when it is a collated telegram (Rule 91).

Rule 122.—No refund will, under any circumstances, be made for a State telegram of any Class, or for a Deferred Private telegram on the ground of delay.

The 26th March, 1897.

No. 141.—Mr. F. D. Fowler, Executive Engineer, 1st grade, State Railways, and Deputy Consulting Engineer for Railways, Madras, officiated as Consulting Engineer for Railways, Madras, with the rank of temporary Superintending Engineer, 3rd class, from the 8th September, 1896, to the afternoon of the 11th March, 1897, and with that of Officiating Superintending Engineer, 3rd class, from the 12th to the 23rd March, 1897, inclusive.

The 25th March, 1897.

No. 140.—The following is published for general information:—

No. 103 I.

GOVERNMENT OF INDIA, PUBLIC WORKS DEPARTMENT.—CIVIL WORKS—IRRIGATION.

Calcutta, the 22nd March 1897.

READ—

Administration Report of Irrigation Works in the Madras Presidency for 1895-96.

OBSERVATIONS.—In the Madras Presidency there are ten Major Works, of which nine are classed as Productive and one, the Rushikulya project, as Protective. All the Major Works except the Periyar project were in operation, and the construction estimates of seven of them have been closed.

There are 26 Minor Works for which Capital and Revenue Accounts are kept, and of these 22 are irrigation systems and 4 are tidal canals intended for purely navigation purposes. With the exception of the Munneru, Dondapad and Sagileru projects and the Ganjam-Gopalpur Tidal canal, all these Minor Works are in operation. With the exception of the Buckingham Canal, the Poiney and the Lower Coleroon anicut systems, the construction estimates have been closed.

2. The transactions of the year under review may be summed up as follows:—

The Capital outlay incurred during the year was on Major Works Rs. 16,42,877 and on Minor Works for which Capital and Revenue Accounts are kept Rs. 6,30,241, or a total of Rs. 22,73,118.

The total capital charges to the end of the year amounted on Major Works to Rs. 6,86 75,910 and on Minor Works for which Capital and Revenue Accounts are kept to Rs. 1,66,68,830.

The Major Works irrigated 2,406,090 acres and the Minor Works 534 227 acres; the return of net revenue on Capital outlay being 7 84 per cent. on the former class of works and 10·04 per cent. on the latter.

3. The Capital outlay incurred on the Major and Minor Works during and up to the end of 1895-96 was as follows:—

—	Number of Works.	During the year 1895-96.						Total direct and indirect charges to end of 1895-96.
		Works.	Establishment.	Tools and Plant.	Total direct charges.	Indirect charges	Total direct and indirect charges.	
1	2	3	4	5	6	7	8	9
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
MAJOR WORKS.								
Protective Irrigation Works (Account head, 35) .	1	1,92,432	38,392	—4,347	2,26,477	27,727	2,54,204	42,05,688

MINOR WORKS AND NAVIGATION.								
Works for which Capital and Revenue Accounts are kept (Account head, 43)	(a)24	4,88,422	1,05,908	10,172	6,04,502	25,739	6,30,241	1,66,68,830
TOTAL .	34	17,50,247	3,83,089	40,351	21,73,687	99,431	22,73,118	8,53,44,740

(a) Exclusive of the Ganjam Minor Works system and the Vedaranniyam canal for which complete Capital accounts up to end of 1895-96 have not yet been prepared.

4. Under Major Works, the Capital outlay was incurred chiefly on the Kistna, Periyar and Rushikulya systems.

The Capital outlay on the Kistna-Delta system amounted to Rs. 5,56,299, including indirect charges, and was incurred on various improvements to head works, canals, distributaries and drains.

The Capital outlay on the Periyar system amounted to Rs. 7,51,403, including indirect charges. The main dam was completed with the exception of the tower on the right flank. The water-shed tunnel and left bank escape were also finished. In the Madura Division 108 miles of main and branch canals were completed up to the end of the year. The Periyar works were formally opened on the 10th October 1895 by His Excellency Lord Wenlock, late Governor of Madras.

The Capital outlay on the Rushikulya system amounted to Rs. 2,54,204, including indirect charges. The Russellkonda reservoir and its feeder, the Gulleri channel and most of the distributaries were completed.

Under Minor Works, the Capital outlay was incurred chiefly on the Munnyeru and Sagileru projects and on the Buckingham canal.

On the Munnyeru project, the Capital outlay was Rs. 1,22,132, including indirect charges. The anicut and undersluices were completed. The main channel, the head sluice and several other masonry works were in progress.

On the Sagileru project, the Capital outlay was Rs. 1,31,226, including indirect charges. The anicut, head and scouring sluices, the supply channel and several masonry works were in progress.

On the Buckingham canal, the Capital outlay was Rs. 2,03,687, including indirect charges. Seven locks were completed; six locks and some improvements and diversions were in progress.

5. On Major Works, the length of completed main and branch canals was 2,127 miles, and of distributaries 5,691 miles.

The length of navigable channels of both Major and Minor Works was 1,294 miles.

6. The following statement shows the revenue receipts and working expenses of each work in operation for which Capital and Revenue Accounts are kept:—

Serial No.	Systems.	Capital outlay	Gross Revenue Receipts, 1895-96. Irrigation revenue	Miscellaneous receipts.	Total.	Working Expenses. Direct.	Indirect.	Total	Net actual revenue. 7. The gross revenue derived from the Major Works was Rs. 3,17,439 more than in the previous year. There was an increase of Rs. 2,21,931 in the working expenses, so that the net actual revenue was Rs. 95,508 better than in 1894-95. The net revenue from Major Works attributable to the outlay of Government Capital was Rs. 47,33,711, which represents a return of 7·84 per cent. on the Capital outlay as compared with 7·61 during the previous year.

The interest charges on Major Works in operation amounted to Rs. 22,28,009 during the year, and to Rs. 4,01,47,363 up to the end of the year. The surplus revenue, after deducting the interest charges, was Rs. 25,05,702 during the year, and amounted to Rs. 5,60,81,961 up to the end of the year.

8. The net revenue from Minor *Irrigation* Works attributable to the outlay of Government Capital was Rs. 7,28,925, representing a return of 10·04 per cent. on the Capital outlay as compared with 9·45 per cent. during the previous year.

Of the four Minor *Navigation* Works, the Buckingham canal alone paid its working expenses, the net revenue of Rs. 12,351 derived from it representing a return of 0·14 per cent. on the Capital outlay. The net deficit on the other three works was Rs. 3,611, or Rs. 275 more than in the previous year.

9. The total irrigation revenue derived from Major Works amounted to Rs. 1,03,60,527, in which is included a sum of Rs. 2,46,713 on account of a portion of the revenue of the previous year on the Cauvery delta system which was brought into the accounts of the Public Works Department in 1895-96. Of the total revenue, Rs. 99,09,632 represented the share of land revenue due to irrigation, and Rs. 4,50,895 was the irrigation share of enhanced land revenue.

10. The following statement shows the irrigation receipts and the areas under first and second crops charged as irrigated :—

System.	Revenue derived from irrigated lands.		Area charged as irrigated.		Rate per acre.	
	1895-96.	1894-95.	1895-96.	1894-95.	1895-96.	1894-95.

GRAND TOTAL	1,22,28,185	1,17,36,016	2,940,317	2,983,663	4·2	3·9

(a) Inclusive of the revenue of the previous year, *viz.*, Rs. 2,46,713, derived from the system in the Trichinopoly district.

Under Major Works the area irrigated was 114,509 acres less, and the revenue derived was Rs. 3,33,388 more than in the previous year. The decrease in area occurred chiefly under the Godavari and Kistna delta systems and is attributed to the relinquishment of irrigation in consequence of enhancement of water-rate on these systems.

11. The following table gives details of the average water-rate per acre for first and second crops under Major Works, excluding areas irrigated free of charge :—

	FIRST CROP.						Second crop.
	Government lands.		Zemindari lands.		Inam lands.		
	Wet crop.	Dry crop.	Wet crop.	Dry crop.	Wet crop.	Dry crop.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Godavari delta	4·80	·51	5·09	3·47	5·00	2·95	3·08

Rushikulya project	1·93	2·26	2·09	1·00	2·08	2·14	1·50

12. The area irrigated under first crop on Major Works was 2,159,135 acres, and under second crop 243,944 acres, making a total of 2,403,079 acres. These figures are less than those shown in the statement in para. 9, as the latter includes the area of "Waste charged".

Of the total area 97·25 per cent. was irrigated by flow and 2·75 per cent. by lift.

13. The following statement shows the details of the working expenses, including the old maintenance charges, for each of the Major Works and for the Minor Works in the aggregate :—

Systems.	1895-96.					1894-95.
	New works and repair.	Establishment	Tools and plant.	Indirect charges.	Total.	Total.
Major Works.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Godavari	2,49,046	3,34,130	43,455	29,481	6,56,112	6,48,501
Kistna	3,22,574	3,11,571	59,158	28,489	7,21,792	5,42,215
Penner	25,014	29,870	...	4,934	59,818	57,787
Sangam	43,394	37,466	...	3,928	84,788	72,200
Karnul	72,423	31,883	1,074	3,930	1,09,310	1,09,680
Barur	2,075	1,595	...	173	3,843	4,862
Cauvery	80,564	3,32,696	1,416	39,564	4,54,240	4,52,354
Srivaikuntam	19,868	18,063	...	1,972	39,903	36,319
Rushikulya	20,781	6,708	3,554	675	31,718	15,666
Total Major Works	8,35,739	11,03,982	1,08,657	1,13,146	21,61,524	19,39,593
Per acre irrigated	...	...	...	...	0·89	0·79
Minor Works and Irrigation	2,27,616	1,10,803	4,976	9,020	3,52,415	3,66,774
Grand Total	10,63,355	12,14,785	1,13,633	1,22,166	25,13,939	23,06,367

The large increase in the working expenses of the Kistna delta system is attributed to expenditure incurred on closing breaches caused by a cyclonic storm in September 1895.

The cost of maintaining the Major Works was 20·5 per cent. of the gross revenue derived from them against 19·0 per cent. in the previous year.

14. The charge for establishment in column 3 of the statement in the last paragraph is made up as follows :—

	Major Works.	Minor Works and Navigation.	TOTAL.
	Rs.	Rs.	Rs.
Revenue management . { Direction and execution .	6,08,569	12,477	6,21,046
Revenue management . { Collection charges .	3,12,930	47,485	3,60,415
TOTAL .	9,21,499	59,962	9,81,461
Maintenance of works	1,82,483	50,841	2,33,324
GRAND TOTAL .	11,03,982	1,10,803	12,14,785

The cost of revenue management on the Major Works was 8·7 per cent. of the gross revenue realized from them.

15. The estimated value of the crops irrigated by the Major Works and the Minor Works in operation for which Capital and Revenue Accounts are kept was 615¾ lakhs of rupees.

Ninety per cent. of the area irrigated by these works was under rice crop.

16. The following table gives details regarding navigation on the four principal canals :—

	Length of navigable canals.	Receipts.	Expenditure.	Value of goods.	Ton mileage.	Passengers.
	Miles.	Rs.	Rs	Rs.		No.
Godavari delta canals	493	87,043	77,270	2,24,77,993	7,535,231	241,150
Kistna delta canals	307	36,722	71,638	1,62,75,148	15,234,834	123,212
Karnul-Cuddapah canal . .	190	1,302	10,791	[illegible]1,563	148,638	33
Buckingham canal	262	1,08,387	62,059	2,57,97,068	28,375,467	101,262
TOTAL FOR 1895-96 .	1,252	2,33,449	2,21,758	6,49,01,772	51,294,170	465,657
TOTAL FOR 1894-95 .	1,252	2,50,355	2,19,169	5,31,20,783	50,678,811	497,800

17. The following table gives details regarding works for which neither Capital nor Revenue Accounts are kept :—

	Area, first and second crops.	Irrigation revenue.	Rate per acre	Outlay, direct and indirect, and collection charges.	Rate per acre.
	Acs.	Rs.	Rs.	Rs.	Rs.
I. Works under Public Works Department for which a continuous record of expenditure is kept individually .	176,902	6,99,938	...	...	...
II. Other works under Public Works Department	1,405,833	40,81,061	...	...	...
III. Works under the Revenue Department	1,809,430	43,83,416	..	...	...
TOTAL, 1895-96 .	3,392,165	91,64,415	2·70	(a)16,12,627	0·48
TOTAL, 1894-95 .	* 3,175,140	* 83,21,703	2·62	17,59,321	0·54

(a) Inclusive of Rs. 3,71,507, the outlay incurred by Civil Officers and not included in the accounts of the Examiner of Public Works Accounts.

* Revised figures furnished by the Local Government.

The total area irrigated was made up of 2,538,935 acres of first crop and 853,230 acres of second crop, and the irrigation revenue was Rs. 8,42,652 more than in the previous year.

18. The following statement shows the outlay on Agricultural Works, *i.e.*, river conservancy and embankments :—

	Rs.	Rs.
Original works	1,11,292	
Repairs	3,13,998	
		4,25,290
Establishment		90,819
Tools and plant		6,108
Total		5,22,217

The receipts realized from the plantations along river embankments amounted to Rs. 23,903 against Rs. 26,979 in the previous year.

19. Six investigating parties were employed on the Tank Restoration scheme, the expenditure on which during and up to the end of the year was as follows :—

	Expenditure during 1895-96.					Expenditure to end of 1895-96.
	Works.	Repairs.	Establishment.	Tools and plant.	Total.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Investigation	...	...	30,973	686	31,659	12,57,129
Execution	—1,23,941	5,53,097	98,108	6,351	5,33,615	46,57,808
Total	—1,23,941	5,53,097	1,29,081	7,037	5,65,274	59,14,937

Up to the end of the year 33,176 square miles had been completely investigated, and estimates for 4,662 works to the amount of Rs. 48,44,054 had been sanctioned.

20. The following figures relate to the discharge of some of the principal canals which do not draw the greater part of their supply from Storage Works, and the areas irrigated from them :—

	Area actually irrigated, first crop.	Maximum discharge as designed.	Maximum discharge during the year.	Average discharge at head.	Acres irrigated per cubic foot per second of average discharge.
	Acres.	Cubic feet per second.	Cubic feet per second.	Cubic feet per second.	First crop.
Godavari	580,302	*8,516	13,176	6,155	94·28

* Previous to the construction of the extra vents built in 1887-88 to the Dowlaishweram head sluice.

21. During the year the investigations required for the preparation of the completion estimates for the Cauvery delta system were commenced and the

re-investigation of the Annumalanka project in the Godavari Western Division was also undertaken. Plans and estimates for certain projects in the Kistna Northern Division were under preparation.

22. The report was received by the Government of India on the 28th December, and is accompanied, in addition to the usual appendices, maps and diagrams, by a descriptive note of the Sangam anicut system illustrated by photo prints.

ORDER.—Ordered, that copies of this review and of the report be forwarded to the Revenue and Agricultural Department for information.

Ordered also, that copies of this review be forwarded to the Government of Madras and to the Local Governments and Administrations in the Public Works Department noted in the margin, for information.

The Governments of Bombay, Bengal, the North-Western Provinces and Oudh, and the Punjab.
The Chief Commissioners of the Central Provinces and Burma.
The Agents to the Governor General in Rajputana and Baluchistan.

Ordered further, that this review be published in the *Gazette of India*, and that copies of the review be forwarded to Her Majesty's Secretary of State for India.

W. S. S. BISSET, *Colonel, R.E.*,
Secretary to the Government of India.

The Gazette of India.

PUBLISHED BY AUTHORITY.

CALCUTTA, SATURDAY, MARCH 27, 1897.

Separate paging is given to this Part in order that it may be filed as a separate compilation.

PART II.

Notifications by High Court, Comptroller General, etc.

GAZETTE OF INDIA.

NOTICE.

The 13th March, 1897.

From the 3rd April next, till further notice, Parts I, IV, V and VI of the *Gazette of India*, and the Weather and Crop Report will be published at Simla. After the 27th March all Notifications and other matter intended for publication in those Parts should be addressed to the Officiating Publisher at Simla.

Revised rates from 1st January, 1887.

	Per annum. R	a.	p.
Subscription for *Gazette* and Supplement	15	0	0
Postage	5	8	0
Subscription for Parts I, II, and III, or any of them	6	0	0

INVENTIONS and DESIGNS.

Calcutta, the 25th March 1897.

NOTIFICATIONS.

No. 1006 P.—APPLICATIONS in respect of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act during the week ending 20th March 1897:—

No. 100 of 1897.—Khalap Badha, merchant, of No. 14, Kamatipura Lane, Bombay, for improvements in apparatus for the treatment of aloe and other vegetable fibres.

No. 101 of 1897.—Amended application—*See* No. 460 of 1896.

No. 102 of 1897.—Amended application—*See* No. 458 of 1896.

No. 103 of 1897.—John Norman Collie, F.R.S., of the Pharmaceutical Society, Bloomsbury square, London, for an improved portable barometer.

No. 104 of 1897.—Augustus Gross, engineer, Victor Edward Masters, gentleman, and John Booth, bank clerk, all of 156, Vickery's chambers, 82, Pitt street, Sydney, in the colony of New South Wales, for an improved driving gear for cycles and like vehicles.

No. 105 of 1897.—Douglas Gardner, publican, and Edward Bertrand Hartley, clerk, of 95, Dale End, Birmingham, for an adjustable handle bar for cycles.

No. 106 of 1897.—William Arthur Cameron Waller, gentleman, of 6, Kyverdale road, Stoke Newington, London, for improvements in the construction of tiles.

No. 107 of 1897.—Barnabas James Thomas and Joseph Jex Taylor, civil engineers, both of 1, Victoria street, Westminster, and Gordon Cale Thomas, civil engineer, of Marsworth, in the county of Bucks, for improved means for transferring barges and other vessels from one level to another.

No. 108 of 1897.—Kuvaraji Mancherji Mistri, superintendent and contractor of building works, etc, of No. 12, Khambata lane, Khetwady, Bombay, for the improvement of the gully traps, made of earthen ware, stone ware, porcelain or any other sort of clay or metal applied to drainage works.

No. 109 of 1897.—Amended application—*See* No. 177 of 1896.

No. 110 of 1897.—Lewis John Sylvester Evans, civil engineer, Mussoorie, North-West Provinces, for left-handed scissors.

No. 111 of 1897.—Donald Black, engineer, of No. 2, Ross road, Howrah, for an improved swing door hinge to be known as "the improved gravity door hinge."

No. 1007 P.—SPECIFICATIONS of the undermentioned inventions have been filed, under the provisions of the Inventions and Designs Act of 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Fort St. George and Bombay, the Chief Commissioner of Burma, and the Director of the department of land records and agriculture, North-Western Provinces and Oudh. These and other specifications are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West, Calcutta), on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying:—

No. 295 of 1896.—Charles Edward Middleton, Francis Philip Middleton and Arthur Thomas Middleton, manufacturers, of Adlington, in the county of Lancaster, for improvements in dyeing apparatus. (Specification filed 17th March

No. 363 of 1896.—Herbert Samuel Elworthy, F.C.S., M.S.C.I., technical and analytical chemist, of Bombay, for improvements in the manufacture of carbonic acid gas and in apparatus therefor. (Specification filed 17th March 1897.)

No. 1008 P.—THE undermentioned design has been registered, under the provisions of the Inventions and Designs Act, 1888, in the office of the Secretary appointed under that Act, and copies have been sent to the Governments of Fort St. George and Bombay, and the Chief Commissioner of Burma. This and other designs are open to public inspection, from 11 A.M. to 4 P.M., at the Secretary's office (Imperial Secretariat, Government Place, West), Calcutta, on payment of a fee of one rupee, and a certified copy of any one of them will be supplied on payment of the fixed expenses of copying :—

No. 7D of 1897.—R. E. Josland, carriage builder, of No. 8, Old Court House corner, for a low hung, two-wheeled carriage, with a folding and removable hood.

No. 1009 P.—THE fees prescribed in Schedule 4 of Act V of 1888 have been paid for the continuance of exclusive privilege in respect of the undermentioned inventions for the periods shown against each :—

No. 229 of 1889.—Arthur Elphinstone Cummins, engineer, of 118, Haverstock hill, in the county of Middlesex, for improvements in apparatus for compressing cotton or other materials into bales. (From 11th April 1897 to 11th April 1898.)

No. 298 of 1889.—Sir William Thomson, Knight, (Lord Kelvin) of Glasgow college, doctor of laws and professor of natural philosophy, in the university and college of Glasgow, in the county of Lanark, for improvements in valves for water, steam or other liquids or gases. (From 15th March 1897 to 15th March 1898.)

No 19 of 1890.—Clemens Baron von Bechtolsheim, gentleman, of Stockholm, in the Kingdom of Sweden, for improvements in centrifugal creamers. (From 24th March 1897 to 24th March 1898.)

No. 143 of 1890.—Carl Linde, professor, of Wiesbaden, in the German Empire, for improvements in refrigerating machinery. (From 2nd April 1897 to 2nd April 1898.)

No. 309 of 1890.—Edward Joseph Hardy, engineer of 134, Amity street, Brooklyn, New York, for improvements in the production of cold and ice and in apparatus therefor. (From 18th March 1897 to 18th March 1898.)

No. 179 of 1891.—Francis Edward Elmore, electro-metallurgist, of Spring grove, Thwaite gate, Leeds, in the county of York, for improvements in mandrils for electrolytically deposited tubes. (From 19th April 1897 to 19th April 1898.)

No. 248 of 1891.—Alexander Shiels, M.B., C.M., B.Sc., of 190, Bath street, Glasgow, for an improved method of and apparatus for automatically regulating temperatures in ships, buildings, rooms and other interiors or places. (From 18th March 1897 to 18th March 1898.)

No. 332 of 1891.—William Tatham, machine maker, of Vulcan works, Rochdale, in the county of Lancaster, for improvements in or applicable to machinery for preparing and spinning fibrous material having reference to the drawing of the slivers or rovings. (From 14th March 1897 to 14th March 1898.)

No. 105 of 1892.—Saiyid Amir Ali, coffee planter, of Hassan, in the province of Mysore, for improvements and alterations in the "Husani coffee peeler." (From 30th March 1897 to 30th March 1898.)

No. 325 of 1892.—Roger Pye, mill-furnisher, of 69, Darwen street, Blackburn, in the county of Lancaster, for improvements in appliances for moistening, heating, cooling and ventilating factories and other buildings. (From 17th March 1897 to 17th March 1898.)

No. 1010 P.—WHEREAS the inventors of the undermentioned inventions have respectively failed to pay within the time limited in that behalf by the fourth schedule

to the Inventions and Designs Act (V of 1888), the fees hereinafter respectively mentioned, it is hereby notified that under the provisions of section 8, sub-section (2) of the said Act, the exclusive privilege of making, selling, and using the said inventions in British India and of authorizing others so to do has ceased :—

No. 168 of 1892.—William Carey Leechman's invention for plates for oil and other presses. (Specification filed 17th December 1892.)

No. 187 of 1892.—Theodor Jaeger's invention for improvements in soot doors and manholes for chimneys, flues, ventilating shafts, and the like. (Specification filed 16th December 1892.)

No. 275 of 1892.—William John Brewer's invention for improvements in antifriction wheel bearings for rotary axles. (Specification filed 16th December 1892.)

No. 287 of 1892.—William Don and Thomas Watson's invention for a mica non-conducting composition for covering boilers, etc. (Specification filed 17th December 1892.)

Fee in respect of the continuance of an exclusive privilege—

(4) (*a*) After the filing of the specification and before the expiration of the fourth year from the date of the filing thereof:—

The sum of ₹50 for each of the said inventions.

NOTICES.

All communications relating to Act V (the Inventions and Designs Act) of 1888 should be addressed to the "Secretary to the Government of India, Department of Revenue and Agriculture (PATENTS BRANCH), CALCUTTA."

The office of the Secretary under the Act is open for the transaction of business from 11 A.M. to 4 P.M. on all days except Sundays and gazetted holidays.

The Government of India are advised that as trade marks are not "designs" within the meaning of the Act, they cannot be registered under Part II.

The fees payable under the fourth and sixth schedules are now collected in cash, and applicants are warned that they must be responsible for any delay in cashing cheques.

Copies of the weekly notifications, and of the quarterly lists, of applications and specifications filed in the Secretary's office are now on sale to the public at one anna and eight annas a copy respectively.

Attention is requested to the rules made by the Government on the 10th October 1895 in regard to the preparation of applications, specifications and drawings.

All applications made under the Inventions and Designs Act, V of 1888, will from this date (December 19th, 1896) lie in the visitors' room of the Patents Office for ten days from the date of the *Gazette of India* in which their filing may have been notified; or, if the tenth day is a holiday, till the evening of the office day next following.

A. T. PRINGLE,
Offg. Secy. under the Inventions and Designs Act, 1888.

CHIEF COMMISSIONER OF AJMERE-MERWARA.

NOTIFICATION.

Abu, the 18th March, 1897.

No. 245.—In exercise of the power conferred by Sanitary Notification, No. 834, dated 6th March, 1897, of the Government of India in the Home Department, the Chief Commissioner of Ajmere-Merwara is pleased to make the following rules under section 2, sub-section (1) of the Epidemic Diseases Act, 1897:—

PART I.

RULES RELATING TO THE MUNICIPALITIES OF AJMERE, BEAWAR AND KEKRI, AND THE CANTONMENTS OF AJMERE, NASIRABAD AND DEOLI.

1. If in any house a person becomes ill, or dies, of a disease which is known, or suspected to be, bubonic plague, the owner of such house, or if the owner be non-resident, the occupier, and every head of a family resident therein, shall forthwith report the occurrence of such illness or death at the nearest police station.

2. If there is, or has been, resident in any house a person who has come since the 1st of February 1897 from Bombay, Poona, Karachi or other place in which bubonic plague is prevalent, the owner of such house or, if the owner be non-resident, the occupier, and every head of a family resident therein, shall report at the nearest police station—(1) the illness of any person in such house, or (2) the death of any person in such house, immediately such illness is apparent or death occurs.

3. Any medical practitioner who (1) attends a case of illness in a house in which there is present a person who has come from a place where plague is prevalent, or who (2) attends in any house a case in which he has reason to believe the sick person to be infected with bubonic plague, shall forthwith report such illness to the nearest police station.

4. On receiving a report under rule 1, 2 or 3, the officer in charge of the police station shall immediately report the matter to the District Superintendent of Police, the District Magistrate and the Health Officer of the municipality or cantonment.

Explanation.—The Civil Surgeon shall be the Health Officer unless another medical officer is appointed by the Local Government to be Health Officer.

5. In the case referred to in rules 1, 2 and 3, a sick person or dead body shall not be removed from the house without the written permission of the Health Officer: and the head of the family shall dispose of a dead body by cremation or burial in such manner as may be directed by the Health Officer.

6. The owner and occupier of a house, and the head of any family resident therein, shall comply with any direction that may be issued by the Health Officer with regard to the disinfection and cleansing of a house, the disinfection or destruction of clothing and personal effects, the disposal of any corpse, the improvement of the sanitary condition of the premises, and with regard to other similar matters.

7. The Health Officer shall, if he considers it necessary, himself take measures for the disinfection of a house and for the other matters referred to in the preceding rule.

Should the Health Officer think it necessary and practicable to burn or otherwise destroy any non-masonry and inflammable structure, he will report the case to the Magistrate of the District and act on his orders. The Magistrate of the District may order the burning or destruction of any hut or other temporary structure, if disinfection cannot be satisfactorily effected.

8. The owner and occupier of any house shall permit the Health Officer to enter his premises and examine any person whom the Health Officer has reason to believe to be infected with bubonic plague. If the person be a female, the examination shall, if desired, be made through a female doctor, female Hospital Assistant or other female agency.

9. If on examination of a sick person in a house or other place within the limits of a municipality or cantonment, the Health Officer suspects (1) that such person is infected with bubonic plague, or (2) considers that he is actually suffering from bubonic plague, the Health Officer shall, if he considers it necessary, arrange for the removal of such person, (1) to an observation shed, or (2) to a temporary hospital established for the purpose, and for his detention, dieting and medical treatment therein; also for the removal of the other occupants of the house to segregation huts, tents, or suitable structures constructed at a distance from the town, to be detained under observation for ten days.

10. If in any case a person removed to a temporary hospital is accompanied by a companion or attendant, the Health Officer shall require the companion or attendant to live in the immediate neighbourhood of the temporary hospital in a segregation hut or tent provided for the purpose, and to remain in such place until he receives permission from the Health Officer to depart.

11. If a person is attacked with bubonic plague while so segregated, the Health Officer shall remove such person to the temporary hospital, and shall keep under observation in a segregation hut, tent or suitable structure, for a period of ten days from the date of such removal, any companion or attendant who has been with the person attacked.

12. Upon the death of a sick person from bubonic plague, the Health Officer shall for ten days detain under observation all persons who have been in attendance upon him, in segregation huts, tents or suitable structures established for the purpose in the neighbourhood.

13. If bubonic plague has become prevalent in a portion of a municipality or cantonment, the Health Officer may, with the sanction of Government, direct the inhabitants of any street, mahalla or other locality to evacuate their houses, to remove to a temporary settlement established, as a place of segregation, at a distance from the infected quarter, and to remain in such settlement for so long as he may consider necessary. After evacuation, the Health Officer shall arrange for the thorough disinfection and cleansing of the empty premises, and shall not permit the inhabitants to return until the premises are considered to be free from infection.

14. A person dealt with under the foregoing rules shall comply with any directions that may be given to him by the Health Officer with regard to his removal to, and his detention and treatment in, an observation shed, temporary hospital or place of segregation, and with respect to the disinfecting or burning of his clothing and personal effects, the disposal of any corpse, or with respect to any other similar matter: he shall not depart from any such place of detention without the permission of the Health Officer.

15. In the event of death occurring from bubonic plague, the Health Officer shall arrange for the disposal of the body. In the case of a European or Muhammedan, the body shall be buried at least six feet deep and be covered with chloride of lime. the place of burial, if not an authorised cemetery, should be well away from habitations and sources of water-supply. In the case of a Hindu, the body shall be completely and thoroughly burned in an isolated locality in the presence of a responsible official.

16. All Police Officers shall give to the Health Officer such assistance as he may consider necessary in carrying out these rules.

PART II.

RULES RELATING TO VILLAGES AND SMALL TOWNS IN AJMERE-MERWARA.

17. Wherever the deaths reported from any village are more frequent than usual, and especially if the deaths are sudden and attributed to fever, the officer in charge of the police station shall make enquiries from the village policemen with the view of ascertaining whether the deaths were due to bubonic plague.

18. The officer in charge of the police station shall report immediately to the District Superintendent of Police, the Magistrate of the district, the Tehsildar and the nearest medical subordinate —

(1) the occurrence of unusual mortality in any village, and

(2) any cases which he suspects, or knows, to be cases of bubonic plague.

19. Every Patwari shall report to the Tehsildar the occurrence of unusual mortality in his village, or of any death or illness known or suspected to be caused by bubonic fever.

20. On receiving a report under rule 18 or rule 19 the Tehsildar shall forward it at once to the District Magistrate and also proceed forthwith to enquire into the cases with the view of ascertaining whether they are cases of bubonic plague. The result of his enquiries shall be communicated without delay to the District Magistrate, who will take such measures as may be necessary for the sanitation of the village.

21. A Medical Subordinate receiving a report under rule 18 or receiving information of a case of bubonic plague shall (if possible) visit the place where the case occurred, ascertain whether the case was one of plague, give the necessary instructions regarding sanitary measures and report without delay the result of his enquiry and the action taken by him to the Civil Surgeon.

22. The Civil Surgeon will enquire as soon as possible into any case reported to be one of bubonic plague.

23. If the Civil Surgeon considers it necessary that the inhabitants of a village in which bubonic plague has broken out should be removed from the village and required to live in the open or under trees, he shall report to the Magistrate of the District who may direct the inhabitants to remove from their houses, and live elsewhere as he may direct until the houses have been disinfected, and they are permitted to return to the village.

24. Every person to whom an order is given by an officer empowered to act under the preceding rules, with regard to his segregation, the disinfection of his house or personal property, the disposal of a dead body, or with regard to any other matter falling under these rules shall duly obey that order.

By Order,

L. IMPEY, *Captain*,

First Assistant to the Agent to the Governor-General, Rajputana, and Chief Commissioner, Ajmere-Merwara.

ORDERS BY THE VICE-CHANCELLOR AND SYNDICATE OF THE CALCUTTA UNIVERSITY.

Ditto ditto ditto .	3rd Apl.	Ditto.
Akyab, Kyaukpyu, Sandoway, and Rangoon	31st Mar.	Ditto.
Madras, Colombo, Straits Settlements, China, and Japan.	27th ,,	Per A. Lloyd's Str. *Aglaja.*

*Although the date entered in column 2 is, as far as can be calculated, the latest safe date of posting for the next Mail steamer, full allowance being made for the steamer being in advance of her published timing, Mails for the places mentioned in column 1 are despatched daily to Colombo, so that they may proceed by any steamer that has been unusually accelerated or retarded, or by any special opportunity that may be afforded by a steamer not belonging to one of the regular lines.

The letter-box for Inland articles (including articles for Burma and Port Blair and for Ceylon by land route) will be cleared for the last time for articles without the late fee at 7-30 P.M. precisely, after which hour Inland letters and papers fully prepaid and bearing an extra postage stamp of half anna will be received up to 8 P.M. and up to 8-45 P.M. with a late letter fee of 1 anna for the Chord Mail only.

On the day of despatch of the Mail for the Australasian Colonies *vid* Tuticorin, the letter-box for Foreign articles will be cleared for the last time for articles without the late fee at 8-30 P.M., and late letters and papers fully prepaid will be received up to 9 P.M.

On the day of despatch of the Mail for Europe, the letter-box for Foreign articles will be cleared for the last time for articles without the late fee at 9 P.M., and late letters and papers fully prepaid will be received up to 9-30 P.M. On other days the letter-box for Foreign articles will be cleared for the last time for articles without the late fee at 7-30 P.M., and late letters and papers will be received up to 9 P.M. for despatch by any Foreign Mails despatched the same night. The late fee for Foreign articles is 4 annas, which must be prepaid in stamps affixed to the articles.

JOHN OWENS,
Presidency Postmaster, Calcutta.

POSTAL NOTICE.

Parcels and packets of samples may not until further notice be sent by post to Portugal, Madeira, and the Azores.

A. U. FANSHAWE,
Dir. Genl. of the Post Office of India.

CALCUTTA,
The 16th March, 1897.

PURE SULPHATE OF QUININE.

Manufactured at the Bengal Government Cinchona Plantation.

From 1st April, 1896, the price of this Quinine will be as follows :—

1-pound tin, ₹18, or, post free, ₹18-12.

½ „ ₹ 9, „ ₹9-8.

¼ „ ₹4-8, „ ₹5.

Analysis shows this Quinine to be of the purest manufacture; and it is guaranteed to be free from wilful mixture with the interior alkaloids, Cinchonine and Cinchonidine. It is for sale only to Government officers, and only for cash, and may be had from the Superintendent, Botanic Garden, Seebpore, near Calcutta.

বঙ্গদেশের গবর্ণমেণ্টের সিনকোনা আবাদে প্রস্তুত বিশুদ্ধ কুইনাইন।

১৮৯৬ সালের ১লা এপ্রেল হইতে এক কুইনাইনের নিম্নলিখিত মূল্য হইবে, যথা—

১ এক পোণ্ড টিন . ১৮৲ বা ডাকমাশুল বিনা ১৮৲-০

½ আধ „ „ ৯৲ „ ৯৲-০

¼ সিকি „ „ ৪৲-৮ „ ৫৲

পরীক্ষা করিয়া দেখা গিয়াছে যে এই কুইনাইন অতি বিশুদ্ধ রূপে প্রস্তুত করা হইয়াছে। এবং ইহা যে সিনকোনিডিন ও সিনকোনিডাইন নামক অপকৃষ্ট ক্ষারের সংযোগ ইচ্ছা পূর্ব্বক মিশান হয় নাই তাহার সার্টিফিকেট দেওয়া যাইতেছে। ইহা নগদ মূল্যে কেবল গবর্ণমেণ্ট কর্ম্মচারীদিগের নিকট বিক্রয় করা যাইবে, এবং কলিকাতার নিকটস্থ শিবপুরের কোম্পানির বাগানের সুপারিণ্টেণ্ডেণ্টের নিকট পাওয়া যাইতে পারিবে।

Graphic Hydraulic Diagrams for channels in earth, giving Discharges and mean Velocities for varying bed widths, depths, and slopes. By R. G. Kennedy, Executive Engineer. R7-8.

* These include Question Papers for entrance to Engineer and Upper Subordinate Classes and Superior Accounts Branch, Public Works Department.

PLANS OF STATIONS.

Lithographed Plans of the Cantonments and Regimental Lines in the different Military Stations of India. Drawn to a uniform scale, and prepared between 1864 and 1868 for the Government of India, P. W. Department. (Useful for Executive Engineers' and Superintending Engineers' Offices.)

Bengal, 51 Plans,
Madras, 99 Plans,
Bombay, 91 Plans,
N.-W. Provinces, 104 Plans,
Oudh, 21 Plans,
Rajputana, 4 Plans,
British Burma, 19 Plans,
Central Provinces,

each 8*a*.

PROFESSIONAL PAPERS ON INDIAN ENGINEERING.

(FIRST SERIES.)

Vol. I. (Quarterly Nos. 1 to 5), bound R2, original price R18.

Quarterly Nos. 1, 2, 3, 4, and 5, at R1 each, original price R4 each.

Vol. II, Quarterly Nos. 6 and 7, at R1 each.

" III, " No. 13, R1.

" V, " Nos. 18, 19, 20, and 21, R1 each.

" VI, " Nos. 22, 23, 24, and 25, R1 each.

" VII, " Nos. 26, 27, 28, and 29, R1 each.

Extra No., April 1870, R1.

(SECOND SERIES.)

Quarterly Numbers of Vols. I, II, VIII, IX, and XI of the Series at R1 each

Quarterly Number 41A of Vol. X, at R1 each.

Cloth covers for Volumes 1st and 2nd Series, at As. 8 each.

(THIRD SERIES.)

Quarterly Numbers 5, 7 8, 11, 12, 13, 14, and 15, at R1 each

Index to Professional Papers and loose Papers, 1st and 2nd Series, at 2*a* each

FERROTYPE PRINTING

Chemicals and Lithographic Paper for this process can be purchased from Thomason College Book Depôt. Application to be made to the Curator

Apparatus for Printing can be made up at the Roorkee Workshops, and all particulars obtained from the Superintendent.

CIRCULARS.

Circulars containing the Rules of admission to the following classes of the College can be obtained on application to the Curator:—

Engineer and Telegraph classes.
Upper Subordinate Classes, 1st, 2nd, and 3rd Grades
Lower Subordinate Class.
Mechanical Apprentice Class.
Industrial Classes.

J. CLIBBORN, *Lieut.-Col., I.S.C.,*
Principal, Thomason College, Roorkee.

1 D

THE INDIAN LAW REPORTS.

PUBLISHED UNDER AUTHORITY.

The Indian Law Reports, published under the authority of the Governor-General in Council, appear in monthly parts, published as soon as possible after the first of each month, at Calcutta, Madras, Bombay, and Allahabad, and comprise four series,—one for the Calcutta High Court, a second for the Madras High Court, a third for the Bombay High Court, and a fourth for the Allahabad High Court. The cases heard by the Privy Council on appeal from each High Court are reported in the series for that High Court. Cases heard by the Privy Council on appeal from Provinces in India not subject to any High Court are reported in the Calcutta Series.

The Calcutta Series is distributed by the Bengal Secretariat Book Depôt, and the Madras, Bombay, and Allahabad Series are distributed direct from Madras, Bombay, and Allahabad, respectively.

In supersession of the previous advertisements, on and from the 1st January, 1889, the terms of subscription and sale will be as follows for current issues, as well as for back numbers of the Reports from 1876:—

Terms of subscription payable annually in advance.

For the complete Series, *including postage* . . . ₹22-8

	Without postage.	With postage
	₹ a. p.	₹ a. p.
For the Calcutta Series	10 0 0	12 8 0
,, each of the Madras, Bombay, and Allahabad Series	6 0 0	7 0 0
,, a part of the Calcutta Series purchased separately, *inclusive of postage in India*	...	2 0 0
,, a part of each of the Madras Bombay, and Allahabad Series purchased separately, *inclusive of postage in India*	...	1 0 0

The following is the rate at which deductions will be made for parts out of print and at which duplicate copies will be supplied to subscribers when required in place of copies lost in transit:—

	For town.	For mofussil.
	₹ a. p.	₹ a. p.
For the Calcutta Series; per copy . .	0 8 9	0 10 3
,, each of the Madras, Bombay, and Allahabad Series; per copy . . .	0 5 3	0 5 9
,, the Calcutta Series. For the year .	7 2 6	8 6 3
,, each of the Madras, Bombay, and Allahabad Series. For the year . .	4 4 6	4 11 1

Persons desiring to subscribe for, or purchase, the Report should apply to—

Superintendent, Government Press, Madras.

The Superintendent, Government Central Press, Bombay.

The Curator of Government Books, North-Western Provinces and Oudh.

The Officer in charge, Bengal Secretariat Book Depôt.

Orders and subscriptions for 1894 should be at once registered and remitted by money-order payable to the Accountant and Treasurer, Bengal Secretariat, Calcutta.

Advertisements will be received for publication on the wrappers of the Indian Law Reports, Calcutta Series, at the following rates, payable in advance:—

	One page.	*Half page.*	*Quarter page.*
For one issue . . .	₹ 20	₹ 14	₹ 9
,, three issues . . .	,, 55	,, 36	,, 24
,, six ,, . . .	,, 100	,, 68	,, 45
,, nine ,, . . .	,, 145	,, 96	,, 64
,, twelve ,, . . .	,, 180	,, 120	,, 80

Several volumes of the BENGAL LAW REPORTS, from August 1868 to December 1875, and FULL BENCH RULINGS, Parts I and II, are available at the following rates:—

	Without postage.	With postage.
	₹ a. p.	₹ a. p.
Bengal Law Reports, for one year . . Single copies, ₹2 per copy.	20 0 0	22 8 0
Full Bench Rulings, Parts I and II . .	20 0 0	22 8 0

Bengal Secretariat Book Depôt, Writers' Buildings, Calcutta.

Remittances to be forwarded to the Accountant and Treasurer, Bengal Secretariat, Writers' Buildings, Calcutta.

All the wanting parts of the INDIAN LAW REPORTS (complete series) having now been reprinted, the complete Reports from 1876 to 1893 may be purchased for all the years, or for any particular year, on application to the Officer in charge of the Bengal Secretariat Book Depôt.

The subscription, ₹22-8 per annum, should be remitted in advance to the Accountant and Treasurer, Bengal Secretariat.

NOTICE.

It is hereby notified, for general information, that subscription to the complete series of the Indian Law Reports should be registered during the first three months of each calendar year. Subscribers are therefore requested to send in their subscriptions of the complete series before the 31st March in each year. Those who register their names after that date will understand that copies will be supplied only if available.

PART III.

Advertisements and Notices by Private Individuals and Corporations.

Advertisement.

By an order of the Court of Chancery of the County Palatine, of Lancaster, Liverpool District, dated the 30th day of November, 1896, made "In the matter of the Estate of the Reverend JOHN PENNIGNTON, deceased, 1896, P. No. 199" IT IS ORDERED that the following enquiry may be made by the Registrar :—

"An inquiry what grandchildren there were of John Pennington, deceased, the testator in the Petition named living at the said testator's death or born afterwards in the lifetime of his said daughter Sarah Sleddon in his Will named, and whether such grandchildren are respectively living or dead, and if dead who are their respective personal legal representatives."

All persons claiming to be such grandchildren of the said John Pennington, late of Lowton, in the County of Lancaster Clerk in Holy Orders who died on the 14th day of January, 1853, and whose Will was proved in the Consistory Court of the Bishop of Chester on the 21st day of May 1853 are by their solicitors on or before the 31st day of July, 1897, to come in and prove their claims at the Chambers of the District Registrar at Liverpool or in default thereof they will be peremptorily excluded from the benefit of the said Order. The 10th day of August, 1897, at 11 of the clock in the forenoon at the said Chambers is appointed for hearing and adjudicating upon the claims.

The said testator John Pennington had among other children a daughter named Mary Ann who married one—Ward from whom she separated, and afterwards the said Mary Ann Ward is believed to have gone to India between 50 and 60 years since.

Dated this 12th day of February, 1897.

F. WILLIS TAYLOR,
Registrar.

PART IV.

Acts of the Governor General's Council assented to by the Governor General.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 26th March, 1897, and is hereby promulgated for general information :—

ACT No. XII OF 1897.

An Act to enable local authorities to borrow money for temporary emergencies.

WHEREAS it is expedient to enable local authorities to borrow money for temporary emergencies; It is hereby enacted as follows :—

Short title, extent and commencement.

1. (1) This Act may be called the Local Authorities (Emergency) Loans Act, 1897.

(2) It extends to the whole of British India; and

(3) It shall come into force at once.

Power to local authorities to borrow in cases of famine or epidemic disease.

2. (1) Notwithstanding anything contained in the Local Authorities Loan Act, 1879, or in any other law for the time being in force, a local authority as defined in that Act may, with the previous sanction of the Governor General in Council, borrow money on the security of its funds for any of the following purposes, namely :—

(a) the giving of relief and the establishment and maintenance of relief-works in time of famine or scarcity;

(b) the prevention of the outbreak or spread of any dangerous epidemic disease; and

(c) any measures which may be connected with, or ancillary to, any of the purposes aforesaid.

(2) Nothing in this section shall be deemed to authorize any local authority to borrow or spend money for any purpose for which under the law for the time being in force it is not authorized to apply its funds.

Power to Governor General in Council to impose conditions.

3. (1) Every loan under the last foregoing section shall be made subject to such terms and conditions as the Governor General in Council may think fit to impose.

(2) In particular, and without prejudice to the generality of the provisions of sub-section (1), the Governor General in Council may, by general or special order, prescribe—

(a) the terms on which the Governor General in Council or the Local Government may lend money under this Act;

(b) the manner of recording and enforcing the conditions on which such loans are to be made;

(c) the inspection of any works carried out or expenditure incurred by means of such loans;

(d) the instalments by which such loans are to be repaid, the interest to be charged thereon and the manner and time of repaying such loans and of paying the interest thereon; and

(e) the accounts to be kept in respect of such loans.

Application of sections 6 and 7, Act XI, 1879.

4. The provisions of sections 6 and 7 of the Local Authorities Loan Act, 1879, shall apply to the borrowing of money under this Act. XI of 1879.

Application to loans made before commencement of Act.

5. The provisions of this Act shall apply to any loan made after the first day of January, 1897, and before the commencement of this Act by, or with the sanction of, the Governor General in Council to any local authority for any of the purposes hereinbefore mentioned, and every such loan shall be deemed to have been made under this Act.

J. M. MACPHERSON,
Secretary to the Government of India.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Act of the Governor General of India in Council received the assent of His Excellency the Governor General on the 26th March 1897, and is hereby promulgated for general information :—

ACT NO. XIII OF 1897.

An Act to amend the Indian Stamp Act, 1879.

WHEREAS it is expedient to amend the Indian Stamp Act, 1879. It is hereby enacted as follows :—

Addition of new section after section 7A, Act I, 1879.

1. After section 7A of the Indian Stamp Act, 1879, as amended by Act No. VI of 1894, section 2, the following section shall be added, namely :—

Bonds, debentures or other certificates issued on loans under Act XI, 1879

"7B. (1) Notwithstanding anything in this Act, any local authority raising a loan under the provisions of the Local Authorities Loan Act, 1879, or of any other law for the time being in force, by the issue of bonds, debentures or other certificates, shall, in respect of such loan, be chargeable with a duty of eight annas per centum on the total amount of the bonds, debentures or other certificates issued by it, and such bonds, debentures or other certificates need not be stamped and shall not be chargeable with any further duty on renewal, consolidation, subdivision or otherwise.

"(2) The provisions of sub-section (1) exempting certain bonds, debentures or other certificates from being stamped and from being chargeable with certain further duty shall apply to the bonds, debentures or other certificates of all outstanding loans of the kind mentioned therein, and all such bonds, debentures or other certificates shall be valid, whether the same are stamped or not :

"Provided that nothing herein contained shall exempt the local authority which has issued such bonds, debentures or other certificates from the duty chargeable in respect thereof prior to the twenty-sixth day of March, 1897, when such duty has not already been paid or remitted by order issued under this Act."

Amendment of No. 39 in Schedule I, Act I of 1879.

2. In Schedule I, No. 39, of the said Act, after the heading "Lease" in the first column, the words "including an under-lease or sub-lease" shall be added.

Amendment of No. 60 and addition of new No. 60A in Schedule I, Act I of 1879.

3. In Schedule I, No. 60, of the said Act, the word "Lease" wherever it occurs, is hereby repealed ; and after the said No. 60 the following shall be added, namely :—

"60A.	**TRANSFER OF LEASE** (A way of assignment and not by way of under-lease.	The same duty as a Conveyance (No. 21).

PART V.

Bills introduced in the Council of the Governor General of India for making Laws and Regulations, Reports of Select Committees presented to the Council, and Bills published under Rule 22.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

The following Bill was introduced in the Council of the Governor General of India for the purpose of making Laws and Regulations on the 26th March, 1897 :—

No. 58 of 1897.

A Bill to amend Act XX of 1863 (an Act to enable the Government to divest itself of the management of Religious Endowments).

WHEREAS it is expedient to amend Act XX of 1863, relating to the administration of Religious and Charitable Institutions and Endowments of a public character in British India ; It is hereby enacted as follows :—

Short title, extent, application and commencement

1. (*1*) This Act may be called the Religious Endowments Amendment Act, 1898.

(*2*) It extends to the whole of British India and applies to all non-Christian Religions and Charitable Institutions and Endowments of a public character the annual income of which does not fall below two hundred and fifty rupees ; and

(*3*) It shall come into force on the first day of January, 1898.

Definitions.

2. In this Act, unless there is anything repugnant in the subject or context,—

(*1*) "Religious and Charitable Institutions" include all temples, mosques, pagodas, shrines and charitable institutions by whatever local designation known, and all property endowed or purchased, and all offerings of pilgrims connected therewith, whether applied to religious or charitable or other purposes, which are not the personal property of, and offerings to, any individual :

(*2*) "trustee" includes all persons, by whatever local designation such persons may be known, who have charge or management of any institution, or the property of any institution, in trust ; and

(*3*) "Civil Court" means the Court of the District Judge in the district in which the institution is situated.

Formation of electorates.

3. (A) In every District where a Committee such as is contemplated by Act XX of 1863 has been constituted, such Committee shall, within a month of the passing of this Act, prepare a register, and publish in all public offices and institutions a list of the leading persons of each religion or sect which has any institution in the district, including the principal landholders, pandits, moulvies and priests, and all such men of respectability and position as in the opinion of the Committee ought to be included in this list. (B) Provided that, where no such committee has been constituted, the Civil Court of every District shall, within a month of the passing of this Act, nominate three persons of each religion or sect to form a Committee to prepare and publish the aforesaid list.

The persons of each religion or sect included in this list shall be "the district electorate" of that religion or sect in that District for the purposes of this Act. But the said Committee

shall include or eliminate the name of any person who, in the opinion of two-thirds of the persons in the lists so prepared, may be recommended or objected to.

Formation of District Committee.

4. The said Committee shall call upon each electorate to meet at a time and place to be fixed by it, and duly notified in all public offices and institutions, and elect by a majority of votes, not less than three, and not more than five, members to form "the District Committee" for the control of the endowments of that religion or sect in that District.

Formation of Central Committee.

5. Each District Committee of any Province within a month of its election shall elect a voting Delegate. Such voting Delegates shall meet at a time and place jointly agreed upon and shall elect by a majority of votes not more than five members, and the members so elected shall form "the Central Committee" of that religion or sect with head-quarters at any place that the said Committee by a majority of votes may elect for the purpose.

Default of electorate.

6. In case the district electorate or the District Committee fail to make the elections required by sections 4 and 5, the Civil Court of each defaulting district and the High Court of the Province shall nominate the members of the District and Central Committees respectively.

Tenure of office of members of Committees.

7. The District Committee and the Central Committee shall hold office for three years, but will continue in office until relieved by their respective successors, and their members will be eligible for re-election. The said Committees shall elect their own chairman and decide all matters by a majority of votes, each member having one vote and the chairman having a casting vote.

Powers of Central Committee

8. As soon as the first Central Committee shall have been formed, the powers hereby conferred on the Committees referred to in clauses A and B of section 3 shall thenceforward vest in such Committee and its successors.

Removal of members of Committees.

9. Any member of the District or Central Committee, who shall be found guilty of misconduct or any conduct which make him unfit for his place, shall be liable to be removed by the unanimous vote of the remaining members.

Provision for vacancies on Committees

10. Any vacancy caused by death, resignation or removal of any member shall be filled up according to the provisions of the aforesaid sections 4 and 5. The member or members so elected shall hold office only for the unexpired portion of the Committee's tenure of office. The District and Central Committee, on the expiration of the tenure of their office, shall also be elected in the same manner.

Revision of lists of electorates.

11. Each Central Committee shall, in the first quarter of the last year of its tenure of office, either confirm or reverse the lists of District electorate, and shall in the last quarter of the same year cause the District Committees and District electorates to make their respective elections under sections 4 and 5: Provided that, in case such District Committees or District electorates fail to act, the High Court of the Province and the Civil Court of the District shall respectively exercise powers conferred under this section.

Powers of District Committee.

12. The District Committee of each religion or sect shall have absolute control, not inconsistent with their maintenance, over the institutions belonging to that religion or sect, including the appointment of the trustees, according to the custom prevailing in each institution, as vacancies shall occur after the passing of this Act, but shall not have the power of dismissal of trustees for misconduct, disobedience of orders issued by the District or Central Committee or dereliction of duty assigned to them except as hereinafter provided.

Duties of District Committee.

13. The District Committee shall keep a register of the institutions in its charge, with properties appertaining to them, and the trustee shall submit, within a time to be fixed by the District Committee, a list of all such properties. The trustees shall prepare a budget of receipts and disbursements including their rateable share of costs of necessary establishment of the District and Central Committees in March every year for each shrine, and shall likewise submit monthly or quarterly accounts. All these shall be kept and submitted in the forms prescribed by the Central Committee in consultation with the District Committee.

Revision of budget

14. The District Committee may, by a majority of votes, revise the budget as they see fit, subject to confirmation or revision by the Central Committee.

Custody of property

15. The property and the proceeds of every institution shall remain in such custody as at the commencement of this Act, subject to such provisions as the District Committee shall, with the sanction of the Central Committee, prescribe for their safety.

Appeal to Central Committee.

16. The orders of the District Committee shall be appealable to the Central Committee, whose decision shall be final.

Power of Central Committee to make inquiry.

17. In addition to the powers conferred by section 13 of Act XX of 1863, the Central Committees of each religion or sect shall have power to call for explanation from the trustees subject to their control and to hold enquiries into the management and the conduct of such trustees. The Civil Court within whose jurisdiction such enquiries are held shall, on the application of the Chairmen of such Central Committees, issue the necessary processes for production of documents and the appearance of witnesses at such enquiries.

The District and Central Committee shall have power to take evidence on oath in any inquiry before them, and their members, individually and collectively, as well as the trustees, of any institution or property aforesaid shall be public servants within the meaning of the Indian Penal Code XLV

Rules and bye-laws.

18. The Central Committee of each religion or sect in consultation with the District Committee of that religion or sect shall have power to frame necessary bye-laws and rules for the election of the members of the said Central and District Committees, and for the proper management of the institutions and properties within their respective jurisdiction, and for the due discharge of their duties by the aforesaid trustees: These bye-laws and rules and the annual report of the administration of the institutions and properties in their respective jurisdiction shall be published in each provincial Gazette not later than the middle of June of every year.

Expenses of Committees

19. The District Committee shall be entitled to maintain an office and an establishment ordinarily costing not more than fifty rupees per mensem, and the Central Committee not more than one hundred rupees per mensem, exclusive of other incidental charges, such as the cost of auditing of accounts, or the travelling expenses of any member deputed to inspect any institution, or make local enquiry whenever necessary. These items of expenditure shall, as far as practicable, be rateably apportioned among the several shrines of the districts or recovered from the particular shrine to which they relate, and shall be included in the budgets and the accounts of the shrines or shrine in question, respectively.

Amendment of section 18, Act XX, 1863

20. In section 18 of Act XX of 1863, after the words "no suit" and before the words "shall be entertained" the following words shall be inserted, *viz.*, "except when such suit is brought by any Central Committee of any religion or sect constituted under this Act."

STATEMENT OF OBJECTS AND REASONS.

1. The object of the Bill is to remove certain defects in the management of Religious and Charitable Endowments under the law as it stands at present.

2. The Bill proposes to leave the existing trustees where they are. It allows their successors to come in, in accordance with the usage in vogue in each institution, in that behalf. It leaves untouched all the trust property and income in the very hands which now hold them. It leaves them to carry on the customary expenses as hitherto, but only subject to budgeting previously and subject also to providing for possible contingencies which might arise for revision of such budget—a revision which no Committee would be found to make repeatedly or largely in the face of long-standing usage.

3. As regards the cost of the controlling agency, advantage is taken of the widespread ambition and readiness to render *unpaid* service in public interests, and each endowment is laid under a contribution, which is the veriest minimum that can be imagined as needed for maintaining a fairly efficient subordinate official staff.

4. As to the *constitution* of the controlling machinery, the Bill provides for two sets of Committees for each religion or sect. It makes the District Committees exercise *direct* supervision over the trustees, and the higher or Central Committees, as they are called, to exercise *general* supervision and act as an appellate tribunal to correct mistakes and remedy the effects of likes and dislikes on the part of the District Committees.

5. The Committees are formed on the basis of election by the better class of worshippers of each religion or sect. An electorate formed by such classes should, it is thought, suffice for all practical purposes.

6. The members of the Committees would hold office *for a term of years* and *not for life* as now.

7. The Bill proposes to abolish the distinction which the present law makes between the endowments which had been under the direct control of the Government at one time and those that had not been so, malversation of the one class being as culpable as of the other.

8. It is proposed to enlarge the powers of the Central Committees relative to holding enquiries into the conduct of trustees, and dispense with the necessity on their part to obtain prior sanction to sue which the present law enjoins, while the trustees will continue to enjoy the present safety against harassment by any action of Committees by being liable to dismissal only by means of the decree of a Civil Court.

P. ANANDA CHARLU.

The 23rd March, 1897.

J. M. MACPHERSON,
Secretary to the Government of India.

SUPPLEMENT TO

The Gazette of India.

No. 13.] CALCUTTA, SATURDAY, MARCH 27, 1897.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weather Review of India for the week ending at 8 a.m. on Saturday, March 13th, 1897.

The principal feature in the weather of the past week has been the large disturbance which affected the Punjab and neighbouring regions between the 7th and the 10th. This depression occasioned a very large barometric rise and fall over North-West India, high winds and gales at all stations in that area, but particularly at the hill stations, and gave snow or rain to the Baluchistan and North-West Himalayas and rain to some submontane stations in the Punjab. The unsettled weather which accompanied this disturbance was succeeded by a rapid fall of temperature, and a cold wave appeared in the north-west and gradually spread right across Northern India during the last four days of the week. During the first three days of the period under review strong south-westerly winds were blowing from the Bay into Bengal and at this time showers were experienced in parts of North-East India. Conditions were hence very unsettled in North-Western India and slightly unsettled in North-Eastern India, during the week under review, but with these exceptions the weather was quiet and fine. Up to the 10th the heat was generally excessive over India, but on that day the cold wave, noticed above, appeared and the mean temperature fell to below the normal average in all provinces except Burma and Madras.

Daily Summary.—*Sunday, 7th March.*—The barometer was rising slightly over North-East India, but was falling elsewhere. The fall had been rapid over parts of the Punjab and of Rajputana, and a moderate depression

was shown with its centre between Bickaneer and Montgomery. Except in the north-west readings were very uniform. The winds were cyclonic in the north-west, southerly and south-westerly over the Bay, and variable elsewhere. The mean temperature was lower than usual over the Gangetic Plain, part of the Central Provinces, and on the Bombay coast, and higher than usual elsewhere. Light snow had fallen at Minimarg and light rain at Sibsagar, Chittagong, and Bhamo.

Monday, 8th March.—The barometer changes were generally slight, except in the extreme north-west where pressure was giving way briskly to rapidly. Readings were highest in North-East and lowest in North-West India. The winds had shifted to east up the Gangetic Plain, but elsewhere the general directions were unaltered. The mean temperature was lower than usual in North Bombay and along the Bombay coast, but was excessive in all other places—most so in the Madras Deccan and in Lower Bengal. Snow was falling in Kashmir, while heavy local showers of rain had been received at Silchar (2·30″) and Chittagong (1·19″)

Tuesday, 9th March.—The barometer had fallen rapidly to very rapidly over the Punjab, and a deep depression had appeared in the north of that province. At the same time pressure had increased in all other parts of the Indian area, and the two changes had resulted in steep gradients over North-West India. Strong cyclonic winds and gales prevailed in the north-west and abnormal easterly winds up the Gangetic Plain. Southerly winds continued over the west and north of the Bay and variable winds elsewhere. The mean temperature was excessive except over the Bombay coast districts and in Baluchistan. In the latter region a rapid fall of temperature had set in. Snow and rain had been received over Kashmir and Baluchistan and light rain had fallen at a few places in the Punjab and Assam.

Wednesday, 10th March.—The barometer had fallen slightly over Burma and North-East India, but had risen elsewhere. The recovery had been very rapid in North-West India and at Peshawar amounted to as much as 0·505″. The depression noticed over the North Punjab had disappeared, but a large low pressure area stretched over Northern India from Khushab in the west to Dacca in the east. Readings were high over the Indus Valley. Northerly and north-westerly winds were reported over North-West India and variable breezes elsewhere. The rapid fall of temperature which had commenced in Baluchistan on the 9th had continued and spread eastward over North-West India, where, at some stations, the change in the 24 hours preceding 8 A.M. had been as much as 12° to 15°. The mean temperature was below the normal average over Bombay, Rajputana, the Punjab and Baluchistan and was generally above elsewhere. At Peshawar the abnormal deficiency was as much as 8° while at Ranchi and Benares the abnormal excess was as much as 10°. Snow had fallen at some stations on the North-West Himalayas, and rain on the neighbouring plains. Showers had also been received over Chota Nagpur.

Thursday, 11th March.—The barometer had continued to rise over North-West India but had fallen in all other places. A large high pressure area overlay North-West India and a low pressure area Bengal, the intervening pressure gradients being fairly steep. Anticyclonic winds prevailed over the north-west and centre, northerly winds down the West Coast of the Peninsula, southerly winds over the west and north of the Bay, and variable breezes elsewhere. The cold wave noticed on the preceding day was steadily advancing eastward, and had reached as far as Jhansi, Saugor and Akola. The contrasts in the temperature conditions were again very marked; thus Purnea reported an abnormal excess of 9° and Hyderabad (S) an abnormal deficiency of 12°. Scattered showers had been received in parts of North-East India.

Friday, 12th March.—The barometer was rising over Bengal and parts of the Central Provinces and was falling elsewhere. As a consequence both the high pressure area in the north-west and the low pressure area in the north-east were less strongly marked than on the 11th, and readings were more uniform generally. The winds had shifted to the northward over Bengal, but were little changed elsewhere. The wave of cold had continued its steady easterly movement, and had reached Gaya and Hazaribagh. The coolest area relatively to the normal was Rajputana, Gujarat, Central India and part of the Central

Provinces, where abnormal variations of from —10° to —12° were reported. Light rain showers had fallen at a few places in the north-east.

Saturday, 13th March.—The barometer had fallen over Baluchistan, and the neighbouring parts of North-West India, but elsewhere there had been a general rise. A fresh low pressure area had appeared over the Indus Valley, while readings were highest over the east of Rajputana. The winds were westerly down the Gangetic Plain, northerly over Lower Bengal and the north of the Bay, north-easterly in the Central Provinces and variable elsewhere. The mean temperature exceeded the normal average over the Assam Valley, Burma and the east and south of the Peninsula, but was lower than usual in all other places. There had been no rain throughout India.

Temperature.—At the beginning of the week the mean temperature was generally excessive, and the amount of this excess gradually increased during the 8th and 9th, so that, by the latter date, the heat averaged 5° greater than usual over a very large part of the country. Then followed the deep depression in the north-west, noticed in the earlier part of this summary, and a rapid fall of temperature commenced in Baluchistan and quickly spread over the whole of India except the centre, south and east of the Peninsula and Burma. During the eastward advance of this cold wave the contrasts of temperature in different parts of the Indian region were very marked. The following gives temperature data for the week :—

Province.	March 1897.							Mean variation of week.
	7th.	8th.	9th.	10th.	11th.	12th.	13th.	
	°	°	°	°	°	°	°	°
Burma	+1·7	+1·6	+2·4	+2·9	+2·9	+1·8	+2·0	+2·2
Bengal and Assam . .	+2·4	+2·9	+5·0	+5·9	+6·3	+2·7	—2·6	+3·2
North-Western Provinces and Oudh	—0·3	+3·3	+6·9	+6·8	+2·4	—4·9	—5·1	+1·3
Punjab	+3·4	+3·6	+5·9	—2·5	—4·8	—6·0	—3·8	—0·6
Bombay	+1·1	+0·6	+1·1	+0·6	—1·5	—2·1	—2·1	—0·3
Central Provinces and Berar	—1·2	+2·8	+5·6	+5·0	+1·9	—4·4	—6·2	+0·5
Central India and Gujarat .	+0·4	+3·0	+2·3	—0·2	—5·5	—8·9	—7·3	—2·3
Sind and Rajputana . .	+2·8	+4·9	+3·8	—3·4	—8·6	—8·3	—6·4	—2·2
Madras	+4·3	+3·3	+1·4	—0·2	+0·9	+2·3	+2·8	+2·1
MEAN FOR WHOLE OF INDIA	+1·6	+2·9	+3·8	+1·7	—0·7	—3·1	—3·2	+0·4

The hottest day (relatively to the normal) was thus the 9th and the coolest the 13th. The following are the highest temperatures reported on each day throughout the week for the whole country :—

March	7th Cuddapah	106·2
,,	8th ,, ...	104·2
,,	9th Bellary, Akola	103·7
,,	10th Nagpur	103·1
,,	11th Yamethin	104 5
,,	12th Thyetmyo	105·1
,,	13th Cuddapah	104·2

Rainfall.—The rainfall conditions of the week under review have been generally similar to those which prevailed last week. The fall has taken place almost wholly over North-West and North-East India, but while the fall in the former area has been more restricted and lighter in the present than in the past week, the fall in the north-east has been more extensive and also heavier. There has been actually or practically no rain during the week over Burma, the Peninsula or the central parts of the country, while Bengal and Assam received more or less rain in all divisions except Orissa, and the Punjab received more or less rain in four out of the seven divisions of that Province.

The rainfall over Baluchistan and the Punjab occurred during the first-half of the week. It was associated generally with the disturbed conditions which

entered India from the westward during that period but more particularly with the deep cyclonic storm which appeared over the North Punjab on the morning of Tuesday March the 9th. Snow commenced on the higher ranges in Kashmir on the 7th and 8th, and continued during the 9th, when also rain was reported from Baluchistan and from Cherat, Murree, Chakrata, Mooltan, Dera Ismail Khan, Peshawar and Rawalpindi. The amount of rainfall received on this day was light on the plains (less than 0·20″), but was moderate to light on the hills. On the following day snow was reported from Murree and rain from Cherat, Peshawar, Khushab and Rawalpindi. The amounts on this day were larger, slightly exceeding 1·0″ at Rawalpindi and Murree, and amounting to 0·83″ at Srinagar and Peshawar. The weather subsequently cleared and was fine in the north-west till the close of the week.

The rainfall in the north-east was not as was the case in the north-west due to any particular disturbance, but occurred as scattered showers and the fall was spread over the whole week. The fall was reported from all the Bengal districts except Orissa, but was most heavy and most general in Assam. South-westerly winds prevailed at the head of the Bay and carried much moisture into Bengal and Assam on all days of the week except the two last and the rainfall occurred during passing showers or thunder storms as is usual at this season and under these conditions.

The rainfall table at the close shows that, as mentioned above, there was actually or practically no rain during the week in Burma, the Gangetic Plain, the central parts of the country or North-West India, except the Punjab. In Bengal and Assam rain fell in all divisions except Orissa, but the average for the week was less than one-tenth of an inch in Deltaic Bengal, the Bengal Hills, and Bihar. It amounted to 2·43″ in Assam (Surma) to 0·84″ in the Assam Hills, to 0·46″ in the Brahmaputtra Valley and to 0·28″ in Chota Nagpur. In the Punjab rain fell in four divisions, but the average amount was less than one-tenth of an inch, except in the Punjab, North which received an average of 0·90.″ The rainfall of the whole country was in excess of the normal in three divisions only, *viz.*, Assam, Surma and Hills, and the Punjab, North. In all other divisions it was in defect, but the anticipated fall during the week under review being generally small, the absolute deficiency is nowhere very great.

The three concluding columns of the table give data for the two weeks, February 28th to March 13th, and show that except in the three divisions where the rainfall this week has been heavy the rainfall for the whole fortnight has been light where it has not been altogether absent.

In East Bengal and the neighbouring division of Cachar the weather was characterised by heavier showers than in other parts of North East India, thus Tipperah received during the week 2·28,″ Sylhet 2·03,″ and Nemotha (Silchar) 3·30″.

Province.	Division.	Rainfall data for week ending 13th March 1897. Average actual rainfall of Division.	Average normal rainfall of Division.	Excess or defect in inches.	Rainfall data from 28th February to 13th March 1897. Average actual rainfall of season to date.	Average normal rainfall, 28th Feb. to 13th Mar. W. L. DALLAS,
Asst. Meteorological Reporter to the Government of India.

SIMLA, *the 18th March 1897.*

DENZIL IBBETSON,

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

Weekly Report on the state of the Season and Prospects of the Crops.

Madras.—*For week ending 20th March.*—No rain except slight showers in Vizagapatam, Salem, Madura and the Nilgiris. Water supplies are generally insufficient. Agricultural operations are progressing in parts. Standing crops have withered or are withering in the Deccan, except under canals and wells, elsewhere good. Harvests are yielding a poor outturn in distressed tracts; middling to fair elsewhere. Pasture is getting scarce generally. Fodder is insufficient in the Deccan, available elsewhere. Cattle deteriorating in the Deccan, good elsewhere. Prices have risen generally except in Anantapur, Madras and the Nilgiris. The numbers on relief are:—relief workers:—18,600 men, 38,397 women, 16,304 children; total 73,301 in the Deccan. Weavers:—4,962 men, 4,268 women, 30 children, relieved at their own trade in Kurnool, Bellary and Cuddapah; making total workers 82,561 in the Deccan. Kitchen inmates:—(dependants) 103 men, 214 women, 3,767 children; total 4,085 in the Deccan and Vizagapatam. Others:—124 men, 196 women, 392 children; total 712 in Kurnool, Bellary, Anantapur, Ganjam and Vizagapatam. Otherwise gratuitously relieved:—7 men, 29 women, 20 children; total 56 in Ganjam; making total gratuitously relieved 4,853 in the Deccan, Ganjam and Vizagapatam. Test workers:—538 men, 1,164 women, 561 children; total 2,263 in Vizagapatam. Total number in receipt of relief 89,677. Prices by which wages are regulated are:—Kurnool, Bellary and Cuddapah 13, Anantapur 13½ seers per rupee.

Bombay.—*For week ending 23rd March.*—Rain in three talukas of Hyderabad and one of Thar and Parkar. Standing crops have been damaged by drought in three talukas, by locusts in two, by frost in two and by blight in two of Karachi; by winds in one of Upper Sind frontier, by frost and winds in Shikarpur; otherwise they are thriving in Sind and Gujarat, but are indifferent elsewhere. Harvesting has been completed except in Khandesh; harvesting of late crops is in progress in parts of Karachi, Hyderabad, Gujarat, Deccan, Konkan, and Dharwar. Preparations for next season have commenced in parts of fourteen districts. Fodder is sufficient except in the Deccan, Belgaum, Shikarpur and parts of Karachi and Baroda. Cotton picking continues in Ahmedabad, Broach, Surat and Dharwar. Condition of agricultural stock is deteriorating in Ahmedabad, Sholapur, Bijapur, and Belgaum, healthy elsewhere, except in parts of Sind, Ratnagiri and Kanara. Prices are rising in parts of Sholapur and Bijapur, falling in parts of Kolaba, stationary in Shikarpur, Thar and Parkar, the Panch Mahals, Surat, Ratnagiri and in parts of Hyderabad, Kolaba, and Bijapur. Prices in affected districts are:—Belgaum 11, Bijapur 10½, Sholapur 9¾, Ahmednagar 8, Poona 9$\frac{1}{10}$, Nasik 9$\frac{3}{7}$, Satara 9, Khandesh 8¼, Dharwar 13 seers per rupee. Average daily number on relief works including dependants are:—Bijapur 72,529, Sholapur 1,17,776, Ahmednagar 89,731, Poona 15,555, Nasik 36,752, Satara 29,902, Khandesh 37,560, Belgaum 15,692, Dharwar 118, total 405,615, of whom 289,529 are relief workers and 116,086 dependants. The numbers on gratuitous relief are:—Bijapur 8,289, including 79 in poor-houses, Sholapur 6,190, Ahmednagar 2,231 including 56 in poor-houses, Poona 3,628, Nasik 146, Satara 18, Belgaum 601, Dharwar 594, total 21,697. Total number in receipt of relief:—427,312.

Bengal.—*For week ending 22nd March.*—There were scattered, and in some places heavy, showers, accompanied by high winds, in many districts on the 21st and 22nd instant. These showers have done good to the spring crops, and have facilitated the ploughing and sowing of the autumn crops. They are said to have done some damage to the mahua (*Bassia latifolia*) crop in Chota Nagpur.

The harvesting of the spring crops is in active progress, and the collection of opium is nearly finished. The pressing of sugarcane still continues. The supply of fodder is still generally sufficient, but water is getting scanty in many parts of Bengal Proper. Prices show but little change during the week. In the distressed districts the prices of the staple food-grains on which the famine wage is based are:—Nadia (common rice) 9 seers, Khulna (common rice) 10 seers, Rajshahi (common rice) 8 to 9¾ seers, Pubna (common rice) 9 to 10 seers, Patna (common rice) 10½ seers, Shahabad (common rice at Bhabua) 8½ seers, Saran (barley) 13 seers, Champaran (Indian-corn) not reported, Muzaffarpur (Indian-corn) 10½ seers, Darbhanga (Indian-corn) 9 seers, Bhagalpur (common rice) 10 to 10¾ seers per rupee. The numbers on relief on Saturday, 20th March, were:—Nadia 15,817, Murshidabad 2,808, Khulna 5,115, Rajshahi 917, Pubna 208, Patna 73, Shahabad 18,97 , Saran 34,103, Champaran 182,869, Muzaffarpur 41,214, Darbhanga 134,060, Bhagalpur 18,027, Sonthal Parganas 16,255, Puri 3,758, Hazaribagh 2,426, Palamau 2,777, and Manbhum 6,472. Total 485,870, against 483,609 in the previous week.

This total is distributed as follows:—

	Men.	Women.	Children.	Total.
Relief-workers . . .	125,565	90 499	48,144	273,208
Dependants . . .	1,041	1,022	15,772	18,438
Relieved in poor-houses .	707	384	325	1,416
Otherwise relieved . .	37,020	92,039	53 536	183,495
Test-workers . . .	6,488	1,811	1,014	9,313

Hatwa	1,400	1,283	1,106	3,789
Gratuitous relief—				
Darbhanga Raj . .	2,042	4,966	4,311	11,319
Hatwa	158	232	160	550
Manjha	104	34	13	151

North-Western Provinces and Oudh.—*For week ending 27th March.*—Light rain fell in a few districts during the week; in the Azamgarh district over half an inch was recorded. Rain has also fallen since the close of the week. Harvesting is in active progress except in the hill tracts. Unirrigated and late sown crops have suffered slightly in a few districts from high west winds. Cane sowings and collecting of opium continue. The numbers in receipt of relief on Saturday, the 20th March, in 19 districts officially recognised as distressed were as follows:—Agra 21,065. Etawah 12,928, Cawnpore 34,606, Fatehpur 21,591, Banda 228,101, Hamirpur 81,902, Allahabad 157,851, Jhansi 78,005, Jalaun 76,032, Mirzapur 50,732, Jaunpur 29,357, Gorakhpur 27,953, Azamgarh 7,945, Lucknow 51,100, Unao 24,452, Rae Bareli 43,847, Sitapur 15,575, Hardoi 84,735, Barabanki 4,697, total 1,052,474; this total is distributed as follows among the various methods of relief prescribed by the Famine Code, which are in operation:—Employed on relief works: 642,692; relieved as dependants 149,020; relieved in poor-houses 27,447, relieved under other provision of the Famine Code 233,315; the numbers relieved in 18 districts which are under observation and not officially recognised as distressed, were on the same date as follows:—relieved on test-works 11,901, relieved in poor-houses 7,414; relieved under other provisions of the Famine Code 27,217; total 46,532; the grand total in receipt of relief on the last day of the week was, therefore, 1,0 ,9,006. The great decrease is probably due to the fact that the day of enumeration was also the *holi* festival. Contributing causes are, doubtless, the employment of the people in harvesting the crops and the reduction of the famine wage in consequence of easier prices. Supplies are generally sufficient. Fodder is still scarce and dear in places. Prices show a tendency to fall. The price of the staple grain on which the famine wage is based varied from 9¾ to 13 seers in the districts officially recognised as distressed.

Punjab.—*For week ending 23rd March.*—Rain averaging from $\frac{1}{7}$ to $\frac{1}{3}$ of an inch has fallen in the districts of the Delhi Division; about $1\frac{1}{4}$ inches in Jullundur, $\frac{1}{10}$ of an inch in Sialkot and Dera Ismail Khan; $\frac{3}{4}$ in Rawalpindi, and $\frac{3}{5}$ in Peshawar. Slight rain also fell in the Amritsar, Gujranwalla and Shahpur districts. Sowings of extra spring crops are still going on, and ploughing for the autumn crops is in progress. Sugarcane and cotton sowings have commenced in some districts. Irrigated crops are generally in fair condition, except those sown on brackish wells, and late on canals in Rohtak; crops on inundated lands, and those on lands dependent on rain, are generally poor; they are said to be good in Lahore. The outturn of spring crops is expected to be somewhat small owing to high winds in Lahore. Prospects are below average in Delhi; they have been improved by the recent rains in Peshawar and Dera Ismail Khan; but more rain is wanted in most districts. Stocks of food-grain have been exhausted in Hissar, Delhi and Shahpur, where requirements are met by importation; stocks in Rohtak, Jullundur, Ferozepore and Gujranwala are reduced, and are average in Peshawar; those with the cultivators of Lahore and Amritsar are insufficient. Barley and gram continue to be damaged by caterpillars and dust-storms in Ferozepore; crops have also been damaged to some extent by hail in Rohtak and Gurgaon. Cattle are generally in poor condition for want of sufficient fodder; they are dying of starvation in Hissar and Rohtak; their condition is said to be good to fair in Jullundur, Lahore, Amritsar and Peshawar, and average in Sialkot. Fodder is scarce in all districts except Peshawar. The average number of relief workers and dependants, etc., was as follows:—relief workers:—33,338 men, 31,786 women, 16,579 children; dependants:—1,106 men, 1,587 women, 15,585 children; relieved in poor-houses:—556 men, 778 women, 506 children; otherwise relieved:—3,067 men, 4,839 women, 2,930 children; on test-works:—211 men, 143 women, 119 children. Details not given for 4,288 persons otherwise relieved in Gujrat. The total number of workers, dependants, etc., in the Punjab was 117,518. Some persons have again attended the Rawal Pindi test-works. Prices are generally high and are still rising in Mooltan, Lahore, Sialkot, Shahpur, and Dera Ismail Khan; falling very slightly in Gurgaon and Ferozepore; the figures are unchanged in other districts; wheat is selling from $7\frac{1}{2}$ to 9 seers, gram 9 to $10\frac{1}{2}$, great millet $9\frac{3}{4}$ to 11, bulrush millet $9\frac{1}{4}$ to 10, and maize 9 to 11 seers per rupee. Prices of the staple food-grains on which the famine wage is calculated are:—Rohtak gram 10 seers, Delhi bulrush millet $8\frac{3}{4}$ seers, Ludhiana maize 11, Ferozepore gram and great millet $10\frac{1}{2}$, Lahore wheat 10, and Indian corn 9 to $10\frac{1}{2}$, and Gujrat maize flour 9 seers per rupee.

Central Provinces.—*For week ending 23rd March.*—The weather was cloudy and unsettled with showers in nine districts; days abnormally hot in parts; Bilaspur and Sambalpur received two inches, other districts less than half an inch. Reaping of spring crops is almost completed; threshing is in progress and land is being prepared in places for the autumn sowings. The mahua (*Bassia latifolia*) crop has suffered in some districts from the cloudy weather especially in Chhindwara and Balaghat; prospects in Nimar, Seoni, Betul and Bhandara are fair to good. Fodder is somewhat insufficient in Hoshangabad, Seoni, Wardha and Sambalpur. Prices are generally steady with no market fluctuations. The numbers on relief works have increased in Saugor and Raipur owing to completion of the harvest; they are almost stationary in Jubbulpore and Mandla and have decreased in all other districts owing to the *holi* festival and mahua picking. The numbers on relief works are:—Saugor 31,452, Damoh 12,032, Jubbulpore 47,540, Mandla 18,445, Seoni 3,523, Narsinghpur 20,389, Hoshangabad 27,184, Nimar 55, Betul 6,491, Chhindwara 3,840, Nagpur 2,587, Chanda 857, Bhandara 5,988, Balaghat 16,280, Raipur 36,149, Bilaspur 11,955, total 244,767. There were also 98,122 persons employed on railways and other private works. The numbers on gratuitous relief are:—Saugor 15,968, Damoh 3,658, Jubbulpore 27,051, Mandla 5,540, Seoni 2,266, Narsinghpur 7,548, Hoshangabad 6,664, Nimar 226, Betul 3,037, Chhindwara 2,534, Nagpur 1,639, Chanda 349, Bhandara 3,608, Balaghat 5,499, Raipur 10,016, Bilaspur 6,332, total 101,335. Grand total 346,102. Details:—on works, 81,279 men, 99,971 women, 58,414 children, with 5,103 unclassed; dependants:—881 men, 1,253 women, and 29,711 children, with 15,437 unclassed; poor-houses:—5,765 men, 5,557 women, and 8,115 children; otherwise relieved:—4,362 men, 6,543 women, and 6,448 children with 17,263 unclassed. The prices of the staple grain on which the famine wage is based are:—Saugor

8¾, Damoh, Narsinghpur and Bilaspur 10, Jubbulpur 10¾, Mandla 8½, Seoni, Nagpur, Chanda 11, Hoshangabad, Bhandara 9½, Nimar, Betul 9, Balaghat 8, Chhindwara 10¼ seers per rupee.

Burma.—*For week ending 20th March.*—In Upper Burma, transplanting of dry weather paddy is progressing and is completed in four districts. Harvesting of peas in Lower Chindwin and reaping of gram, wheat and peas in Pakokku is completed. Reaping of island crops continued. Standing crops are generally in good condition except as previously reported. The price of paddy has risen considerably in Akyab, Prome and Amherst districts and slightly in Rangoon and seven other districts of Lower Burma; in Upper Burma there is a slight rise in Mandalay, Thayetmyo and Minbu. Numbers on relief works:—Meiktila 1,554, Myingyan 8,05; on gratuitous relief.—Meiktila 1,969, Myingyan 1,883, Yamethin 356. Total number relieved 24,857. Price of rice: Meiktila 8 seers 12 chittacks, Myingyan 10 seers 4 chittacks per rupee.

Assam.—*For week ending 23rd March.*—Rain has fallen in all districts; but more is wanted in Nowgong. Prospects of low land rice and tea are good in Sylhet. Ploughing for early rice and pressing of sugarcane continue. Prices:—common rice Silchar 9, Sylhet, Gauhati and Tezpur 10, and Sibsagar 11 seers per rupee. Fodder and water are sufficient except in Nowgong and in parts of the Goalpara district.

Mysore and Coorg.—*For week ending 23rd March.*—MYSORE: Standing crops are in fair condition. Prices have slightly risen in Kadur and Chittaldrug and fallen in five districts.

COORG: Slight rain during week. Rain is much needed. Prices of food-grains are normal. Water and fodder for cattle are sufficient.

Berar and Hyderabad.—*For week ending 23rd March.*—BERAR: Weather is clear and is getting warmer. Harvesting of the winter crops is almost completed; threshing of wheat and linseed continue. Ploughing operations for next monsoon crop are in progress. Scarcity of fodder and water prevails in all districts. Prices of food-grains are steadily rising. 25,423 persons were employed on relief works during the week. Prices:—Jowar:—Akola 10, Amraoti 10, Basim 9½, Buldana 9, Melghat 6 seers per rupee.

HYDERABAD: No rain during week. Harvesting of spring crops completed in most districts. Fodder, pasture and water are scarce. Aggregate number of persons employed on relief works in Gulburga, Raichur and Naldrug:—1,793. Prices in affected districts 9¾ seers per current sicca rupee in Gulburga and 10 seers in Raichur and Naldrug. 99 persons on gratuitous relief in town of Shorapur. Prices:—wheat 6½, coarse rice 6¾ and jowari 11½ seers per current sicca rupee.

Central India.—*For week ending 23rd March.*—Slight rain fell in the Malwa Agency during the week. Agricultural operations are in progress in all Agencies. Crops are in fair condition in Bhopal, Bhopawar, Malwa and in six districts of Gwalior; good in Baghelkhand and on irrigated lands in Bundelkhand Agency; bad and indifferent in the remaining districts of Gwalior. Agricultural stock is fair in Bhopal and Bundelkhand, good in Baghelkhand, Malwa, Bhopawar and in five districts of Gwalior, bad and indifferent in the remaining districts of Gwalior. Pasturage is fair in Bhopal, Malwa and Bhopawar, good in Baghelkhand and two districts of Gwalior, indifferent in Bundelkhand and some districts of Gwalior. Prices are above normal in Bundelkhand, Baghelkhand, Malwa and Bhopawar, steady elsewhere. Opium crops are fair in Bhopal, Bhopawar and in one district of Gwalior, good in Malwa and two districts of Gwalior, indifferent in remaining districts of Gwalior. The number of persons employed on relief works were:—in Gwalior 23,020, in Bundelkhand 40,283 and in Baghelkhand 66,970; on gratuitous relief:—20,963 in Gwalior, 7,754 in Bundelkhand and 4,602 in Baghelkhand. Grand total 103,652. Prices:—10 to 10½ in Gwalior, and 11 seers per rupee in Baghelkhand.

Rajputana.—*For week ending 24th March.* Showers fell in Marwar, in two tehsils of Ulwar and drops in Jeypore. Agricultural operations fair in

Kherwara, poor in Dholepore, and satisfactory elsewhere. Standing crops ripening in one State, thriving in another, poor in one, suffering from high winds in parts of Ulwar, and good elsewhere. Harvest very good in Kherwara, favourable in Marwar and Jeypore, good in Jhallawar and Bikanir, moderate in Bhurtpore, average in Ajmere, and below average in Haraoti. Crops slightly damaged by hailstorm in some villages in Bansur pergunnah in Ulwar. Cattle lean in Bhurtpore, in fair condition in four States, good elsewhere. Pasturage or fodder fair in Haraoti, failing in Dholepore and Bhurtpore, scarce in some tehsils of Jeypore, and sufficient elsewhere. Prices high in one State, rising in three, falling in one, fluctuating in another, and steady elsewhere. The number of persons on relief works was:—Marwar 4,888, Tonk 50, Dholepore 4,660, Bikanir 12,278, Jaisulmere 677. On gratuitous relief:—Marwar 1,219, Tonk 1,923, Bhurtpore 430, Bikanir 3,630, Jaisulmere 81. Grand total 29,836. Prices:—Marwar 8 seers 11 chittacks, Tonk 10 seers 6 chittacks, Dholepore 11 seers 4 chittacks, Bhurtpore 10 seers 3 chittacks, Bikanir 9 seers and 8 seers, Jaisulmere $9\frac{3}{8}$ seers per rupee.

Kashmir.—*For week ending 23rd March.*—Rain fell once during week. Spring crops are generally in good condition. Prices continue little below normal. Price:—24 seers per rupee.

Jammu Province.—*For week ending 24th March.*—Slight rain. Prices rising. Fodder scanty. Relief works proposed to be reopened. Price: 8 seers per rupee.

Nepal.—*For week ending 20th March.*—Sowing of Indian-corn and early rice is delayed for want of rain, which is also required for the wheat and barley crops. The weather is dry and warm with high winds. Price:—8 seers per rupee.

The total numbers in receipt of relief during the preceding and present weeks are as follows:—

T. W. HOLDERNESS,
Deputy Secretary to the Government of India.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE AND AGRICULTURE.

(FAMINE.)

Return of the number of persons in receipt of relief in districts affected by scarcity.

NOTE.—The figures are compiled from the Local Gazettes, and give the District details of the Provincial totals published weekly in the Crop and other Summary in the *Gazette of India*.
Non-labouring children and other dependants of relief workers are classed as on relief works when distinguished in the local returns from those gratuitously relieved in poor-houses or at their homes.

(*a*) Although for convenience classed amongst state railways, this line is the property of the Bengal Central Railway Company. The working of this line has been taken in hand by the State from the 1st January 1897.

(*b*) Includes the Bhopal-Itarsi railway.

(*c*) Total earnings from 22nd February to 14th March 1896.

(*d*) Includes the Godhra-Rutlam-Nagda railway.

(*e*) Includes the Guntakal-Mysore frontier section.

(*f*) Include the Tirhoot state railway. Although for convenience classed amongst state railways, the company's section of this line is the property of the Bengal-North-Western Railway Company.

(*g*) Includes the Jammu and Kashmir and the Hyderabad-Shadipath railways.

(*h*) This line has been transferred to a company from the 1st September 1895, but until arrangements are made for the line to be formally taken over, it will be worked by the state on behalf of the company.

(*i*) Includes the Wardha Coal, the Dhond-Manmad, the Khamgaon, and the Amraoti railways.

(*j*) Includes the Mysore-Nanjangud and the Yesvantpur-Mysore frontier section.

PART VI.

Proceedings of the Council of the Governor General of India, assembled for the purpose of making Laws and Regulations.

GOVERNMENT OF INDIA.

LEGISLATIVE DEPARTMENT.

PROCEEDINGS OF THE COUNCIL OF THE GOVERNOR GENERAL OF INDIA, ASSEMBLED FOR THE PURPOSE OF MAKING LAWS AND REGULATIONS UNDER THE PROVISIONS OF THE INDIAN COUNCILS ACTS, 1861 AND 1892 (24 & 25 VICT., CAP. 67, AND 55 & 56 VICT., CAP. 14).

The Council met at Government House on Friday, the 26th March, 1897.

PRESENT :

His Excellency the Earl of Elgin, Viceroy and Governor General of India, P.C., G.M.S.I., G.M.I.E., LL.D., *presiding*.
His Honour Sir Alexander Mackenzie, K.C.S.I., Lieutenant-Governor of Bengal.
His Excellency Sir G. S. White, G.C.I.E., K.C.B., V.C., Commander-in-Chief in India.
The Hon'ble Sir J. Westland, K.C.S.I.
The Hon'ble Sir J. Woodburn, K.C.S.I.
The Hon'ble M. D. Chalmers.
The Hon'ble Major-General Sir E. H. H. Collen, K.C.I.E.
The Hon'ble A. C. Trevor, C.S.I.
The Hon'ble M. R. Ry. P. Ananda Charlu, Rai Bahadur.
The Hon'ble Sir G. H. P. Evans, K.C.I.E.
The Hon'ble Alan Cadell, C.S.I.
The Hon'ble J. D. Rees, C.I.E.
The Hon'ble Sir Lakshmishwar Singh, K.C.I.E., Maharaja Bahadur of Durbhanga.
The Hon'ble Rao Sahib Balwant Rao Bhuskute.
The Hon'ble P. Playfair, C.I.E.
The Hon'ble Rahimtula Muhammad Sayani, M.A., LL.B.
The Hon'ble Pandit Bishambar Nath.
The Hon'ble Joy Gobind Law.
The Hon'ble C. C. Stevens, C.S.I.
The Hon'ble Sir H. T. Prinsep, KT.
The Hon'ble H. E. M. James.

QUESTIONS AND ANSWERS.

The Hon'ble RAI BAHADUR P. ANANDA CHARLU asked :—

"1. Will the Government be pleased to state if it is a fact that a rule was passed in 1884 by Mr. James, the then Director General of the Post Office of

India, to the effect that no one who had not passed a departmental examination should be appointed as Superintendent in the Post Office?

"2. Will the Government be pleased to state if it is a fact that in his letter No. 2313, dated 30th May, 1884, Mr. James thus wrote to the Post Master General of the North-Western Provinces:—

'In reply to your letter No. 107, dated 8th May, 1884, I beg to state that it is not my intention to exempt any more officials from the examinations for the Superintendentship. Making of exceptions is a serious evil, and I intend to make no more.'?

"3. Is the Government aware that in spite of this distinct order several unpassed Europeans and Eurasians have been appointed as Superintendents, while the claims of several passed natives of India of Asiatic race, who were specially selected by the Department to appear for the examination, have been overlooked? Will the Government be pleased to enquire the reason for this state of things and to state the same?

"4. Will the Government be pleased to state if it is a fact that there are no less than nine men either holding permanent appointments in the Superintendents' grade or officiating as such without passing the departmental examination, and that they are all either Europeans or Eurasians?

"5. Will the Government be pleased to state if it is a fact that no less than five officials who successfully came out of the departmental examination have not been provided with appointments in the Superintendents' grade?

"6. If what is alleged in questions 4 and 5 are facts, will the Government be pleased to ascertain what special reasons justify such cases and to state the same?

"7. Will the Government be pleased to state whether it is aware that in paragraph 4 of his Circular No. 11, dated 16th April, 1884, the Director General of the Post Office prescribed that "European and Eurasian candidates will be required to produce a certificate of having passed an examination, either in Hindustani or a Vernacular of the Province in which they are employed," before they were allowed to appear for the Superintendentship examination, and whether such certificates were produced by all the European and Eurasian candidates who appeared for the Superintendentship examination since 1884. If not, will the Government be pleased to state what special reasons existed for the exemption in each case in which the exemption was accorded?"

The Hon'ble SIR JAMES WESTLAND replied:—

"1. It is a rule of the Postal Department, as laid down by the Director General, that no officer shall receive a substantive appointment as Superintendent unless he has passed an examination, mainly in matters of Postal work. This rule does not necessarily apply to officiating appointments, nor would it be possible to confine the selections for temporary vacancies to passed officers.

"2. The quotation is correct and states the intention of the then Officiating Director General: it is not an order of the Government and does not bind Mr. James' successors, though the same practice has been followed by them, and they ordinarily insist upon officers passing the examination before they are confirmed as Superintendents.

"3. It is not true that several unpassed Europeans and Eurasians have been appointed as Superintendents while the claims of several passed Natives of India of Asiatic race have been overlooked. Since 1884 four officers have been expressly exempted from passing, of whom one is a domiciled European and three are Natives of India of Asiatic race; and there are five officers who have been appointed as Superintendents subject to passing the examination, and have not yet passed, namely, three domiciled Europeans and two Natives of India of Asiatic race.

"The question implies that passing the examination gives a claim to promotion. This is not the case; any officer, in receipt of Rs. 50 a month and upwards, may offer himself for examination, but, if he is accepted, it is on the distinct understanding that he obtains no claim by passing it to supersede his seniors. It is a mere qualifying test. No one is ever specially selected for examination, as stated in the question.

"4. The facts regarding the nine men, to whom it is understood that the question refers, have been already stated ; they do not accord with the allegations in the question. If the question alludes to any other individuals, it is not understood.

"5. It is expressly laid down that passing the examination gives no claim to an appointment as Superintendent ; and there are 40 or 50 persons who have passed the examination and not been appointed Superintendents ; many of them are at present at any rate quite unfit for Superintendentships.

"6. As what is alleged in questions 4 and 5 are not facts, no reasons can be given for them.

"7. This rule has not been enforced since 1884, that is, the production of the certificate has not been insisted on, the reason being that as the Europeans and Eurasians employed in the Department, with possibly one or two exceptions, are domiciled in India and speak at least one Indian language with ease, the test was found unnecessary. Only one existing Superintendent is a non domiciled European, and in his case, and in several others, the certificate was produced."

The Hon'ble RAI BAHADUR P. ANANDA CHARLU asked :—

"Will the Government be pleased to lay on the table the orders of Government relating to recruitment for Account offices and referred to by the Hon'ble Sir James Westland in the reply given to the Hon'ble Rao Sahib B. Bhuskute's question in Council on the 11th instant ?"

The Hon'ble SIR JAMES WESTLAND replied :—

"A copy of the orders referred to, letter No. 3534 of 17th August, 1896, is laid on the table."

FINANCIAL STATEMENT.

The Hon'ble SIR JAMES WESTLAND moved that the Financial Statement be taken into consideration. He said :—"In doing so I have one or two remarks to make. In the first place I have to offer two apologies. My first apology is to the Hon'ble Mr. Charlu, whose suggestion, made last year, that we should accompany our Financial Statement with illustrations and coloured maps, I have been unable to follow. It has not been the custom of the Government of India to do so, nor, so far as I can ascertain, of any other Government, and I hope he will pardon my not being able in this matter to accept his suggestion. My second apology is to the residents of Madras. The Madras Presidency is unfortunately too distant to receive from us a copy of the Financial Statement at the same time that it is issued in Calcutta and Bombay. Judging from the Madras newspapers which have reached me, I am afraid they put this down to malice prepense on my part than to the force of uncontrollable circumstances. I am quite sure that if they only knew the hurry and stress under which the Financial Statement is prepared, they would see that every single additional day that it is possible for us to give to it is of immense service in its preparation. Bearing in mind that a week has to be left at the end of March between the presentation of the Financial Statement in this Council and its discussion by this Council, we are limited to a very few days only for its presentation. The 19th is about the earliest date we can present it, and this year it was nearly the latest also ; if we were to postpone it for a few days longer it would cause considerable inconvenience to this Council, as the Council, according to the usual arrangements, dissolves before the end of March. Now, my Lord, we never close our estimated figures until we have received the fullest information which is obtainable by us regarding the actual accounts of the month of February. Every Treasury in the country makes its report to our officers by telegram, and it is not till the 10th or 11th of March that we have before us the final figures of February which are necessary for us to consider before we close the statement. Now between the 11th and the 19th I desire to give to the Council some sort of information of what work has to be done. In the first place we have to

consider the figures that come in to us, and we have to post them in all the statements which have been already prepared for the Financial Statement. Hon'ble Members can see for themselves in the Financial Statement what the mass of figures in that statement is. The figures are there not by hundreds but by thousands, and I beg Hon'ble Members to remember one thing, and that is that the figures going before them are only the figures of the Budget Statement of the Government of India. There are eight subordinate Governments, and each of these Governments' budgets has to be made up by us at the same time as the statement for the Supreme Government. It will be remembered, therefore, what a tremendous business in the mere matter of posting figures in statements and correcting them and testing them, has to be done and completed during the short interval that passes between the 11th day of March and the 16th of March. On the morning of the 16th of March we were able to give the final press order to have the statement printed off, so that it might be posted that evening, that is the evening of Tuesday, the 16th. The working of those five days was enough, I fancy, to drive most men into a lunatic asylum, and if it had not been for the extremely complete arrangements which were made by the Financial Secretary, Mr. Finlay, and by the Comptroller General, Mr. Cox, and by the Departments which work under them it would have been perfectly impossible to have completed the work by the time we are allowed. I beg, therefore, that the people of Madras will not think that it is out of any disrespect to them or out of any failure to recognise their position as the senior Presidency in India that I failed to send to them the Financial Statement at the same time that it was distributed in the junior Presidencies of Bombay and of Bengal. We are doing our best, as I think the Financial Statement itself shows, to bring Madras a little nearer to Bengal. We are spending a very large sum of money upon the East Coast Railway both in the northern section and in the southern section of it, and in a year or two I hope Madras will be placed in the same position as the other Presidencies so far as regards the reception of the Financial Statement.

"One other remark, my Lord, I desire to make, and that is to point out what seems to me to be the extraordinary position that the Finance Minister occupies in respect to the Financial Statement in this country. Other Finance Ministers when they present their statements have to defend the expenditure proposed against the representatives of the tax-payer. Here the position is exactly the reverse; the Finance Minister is the solitary representative of the tax-payers of India. Of course I do not speak of my Hon'ble Colleagues of the Executive Council who share this responsibility with me, but it is certainly the case in respect of the other Hon'ble Members that on a discussion of the Financial Statement the general line taken is to press all sorts of expenditure upon the Finance Minister, and to show what very excellent services he would render if he would only grant money in this direction and grant money in the other direction. Now I desire to explain for a moment, or rather to recall to the remembrance of Hon'ble Members—for they will understand the matter at once if I do so recall it—what this granting of money means. The Government of India possesses no funds of its own. The only funds it can get for any purposes are the funds it takes out of the tax-payers; and every grant of money by us has in the end to fall upon them. Now let me take an example. I will suppose that I am making a proposal that the residents in a certain district in the Punjab should get a meal a day at the cost of the tax-payers of Madras. The tax-payers of Madras would rise in their indignation, and declare that the thing was, on the face of it, absurd. But suppose I make a converse proposition, a proposition that a good supply of drinking water be supplied to the residents of Madras at the cost of the tax-payers of the Punjab. It at once seems a most reasonable and proper thing; only they wrap it up in convenient phraseology, and talk of obtaining an increase of the Provincial assignment in order that the Provincial Government may make a grant towards their water-supply. But by whatever name called, it is nothing more nor less than calling upon the tax-payers outside Madras to contribute towards the supply of an article of consumption to the people of Madras. I think, therefore, that Hon'ble Members should remember that when we talk of the Famine Insurance Fund, when we talk of

Provincial assignments, and when we talk of grants from Government, we are not talking of any ways and means by which rupees can be produced and be made available for the purposes of expenditure. All these are merely systems and methods by which we regulate the appropriation of the money received from the tax-payer on the one side to expenditure on the other side. Half the arguments that are used in supporting the claims made upon us, especially in the matter of Provincial assignments upon which our discussion to-day will probably turn, are based upon a sort of assumption that the term 'Provincial assignments' expresses some magic means by which the available funds can be increased by the Government of India by some sort of mechanical operation; and that when it is discovered that any province can usefully employ more money in expenditure than it at present has at its disposal—and most of the Provinces do find themselves in that position—it is only necessary to set in operation some mechanical device which Government has at its disposal, and rupees will be produced at nobody's cost. Now we do not grow rupees in the way a peasant grows his grain, nor has the Government of India an unlimited supply of them. I trust that Members, when they are proposing to the Government of India any increase of subsidy or grant or assignment of the kind, and when they are pointing out to us that there is a very large amount of expenditure which can be desirably undertaken by the Local Governments, will remember that they have to show, not only the desirability of the expenditure, but the fairness of levying it, and the fairness of levying it not only on the local tax-payers, but also on other provinces as well as the Province in which it takes place. These, my Lord, are all the remarks I have to make before submitting myself to the slaughter, and I have only now to move that the Financial Statement be taken into consideration."

The Hon'ble MR. JAMES said :—"My Lord, I am glad that it falls to me as junior member of this Council to be the first to felicitate the Hon'ble Financial Member on his Budget. A Budget that shows a deficit of two crores may not seem much a matter of felicitation to him, but considering this terrible famine and plague, he may well be glad that it is no worse, thanks to his own pith and shrewdness in improving the revenue in various ways since he has been Finance Minister, and if he is successful in getting us through it without extra taxation, all India may indeed be grateful. My Lord, it is not the function of an official member to criticise the financial arrangements of the Supreme Government, unless perhaps, as they did not so many years ago, they double the income-tax, and unnecessarily, in the middle of the year. Finance and currency questions, moreover, are matters for experts, far too complex and technical for plain men to offer an opinion upon, unless they happen to belong to that class who intrude themselves where angels fear to tread. Still even a plain man can feel when he sees his own pockets empty, and even more so when he sees largesse poured into the pockets of his neighbour. I venture therefore humbly to make one remark from that point of view. My Lord, with due respect to His Honour the Lieutenant-Governor and the other distinguished members who represent Bengal here, and admitting to the full the unreasoning and unnatural jealousy of Bengal, with which Bombay men are always credited, still I venture humbly to submit that Bengal has been far too well treated always, and in this Budget too.

"Bengal is one of the most fertile and prosperous Provinces in the world, though just now in Behar the state of affairs may be temporarily sad. She used to be, and ought now to be, an enormous source of income to the State. We know the reason why she is not, because, while the land-tax in other Provinces is being continually revised and raised and poured into Imperial coffers, Bengal has a permanent settlement. But because she does not pay her due share of land-revenue to Imperial taxation, that, I submit, is all the more reason why the zamindars should be taxed in other ways and, especially when money is tight, why expenditure justifiably payable by them should be thrown upon them in the shape of additional taxes or rates. In England we have a permanent settlement, and landowners there pay various taxes, mostly paid on luxuries, such as on male retainers, horses, carriages and dogs, not omitting hair powder; in addition they are rated heavily for police, highways, and the relief of the poor. Besides, under

the most recent legislation, a zamindar's property in England pays about five per cent. of its value on every change of ownership. I put it, then, to the Council why should not similar taxation and rating be imposed upon Bengal for the relief of other Provinces in addition to what she pays now. I know the Hon'ble Financial Member has been anxious to deal fairly, so far as his funds admitted, with the Provincial Governments in his new contracts with them. I can testify myself to his great sympathy with, and desire to help, those who are in a tight corner. All the same, I feel pretty sure that his rest at night must now be disturbed by the pitiful wailings and moanings that are being wafted across the continent from those who budgeted for bare efficiency and have found their moderate demands cut down. In illustration of how Provincial Governments are starved, I may remind Your Lordship that when Lord Lansdowne determined that the police throughout India should be put on a proper footing, my Hon'ble friend opposite, now in charge of the Public Works Department, went very carefully into the question of the police in Sind and reported that two lakhs and thirty thousand rupees were needed for the barest efficiency, while for real efficiency a much larger sum was necessary. By the irony of fate it fell to my Hon'ble friend himself, when he became the guardian of the Bombay Provincial Finances, to cut down the grant to a lakh and a half, and to tell me, almost with effrontery, that I must do the best I could with that. And, my Lord, if the Council reflects what it means to the people if the police are inefficient or underpaid, it can realise how seriously shortness of cash in the Treasury affects them in more ways than one. Take another instance. In the whole Province of Sind, the Provincial Government pays for the maintenance of only three miles of road; local rates do all the rest. I come to Bengal, and the first district I visit I see a nice road, and the Collector tells me that the Government give him half a lakh for keeping in order the portion in his own district. No doubt, isolated instances like this may be capable of explanation, but straws show the way the wind blows. I quite admit that the Government of India have not the local knowledge to enable them to select and tax the luxuries of Bengal suitably, but what I should like the Hon'ble Financial Member to say to His Honour the Lieutenant-Governor of Bengal is this:—'Your police cost, you say, 50 lakhs per annum. You must raise a police-rate yourself for that amount. You have a Legislative Council on which your ablest and most experienced officials are seated. You have also many non-official members, full of zeal and keenly anxious to use their great oratorical powers for their country's weal. Do you find out whatever represents the carriages and dogs and the hair-powder to tax, and the death-duties be imposed. From time immemorial, permanent settlement or no permanent settlement, the zamindars of Bengal have been liable to pay for their police, and they should do it now' Out of the abundance of authorities for this position, I will only refer the Council to one, a volume written about thirty years ago by a very able young Civilian. The work, my Lord, is called the *History of Jessore*, by Mr. James Westland. At page 73 I read that even before the settlement zamindars were expected, by means of their ordinary servants, to protect property and hand offenders to the authorities. In other provinces the people who correspond to the zamindars here *are* called on to meet their obligations in respect of police charges. The taluqdars of the province of Gujarat, for instance, were subjected in 1888 by law to the following obligation:—

'The Governor in Council may from time to time determine—

'(*a*) what police-officers and establishment are requisite in each village in a taluqdari estate;

'(*b*) charges on account of police shall be defrayed by the taluqdar at such rates as shall from time to time be determined by Government, and in the event of failure by the taluqdar to pay, at the time when the same becomes due, any sum so payable, the sum shall be recoverable from him, in addition to the jama, as if the same were a part of the jama.'

"These taluqdars are not, as a body, nearly so wealthy as the Bengal zamindars. I would remind the Council that, when Lord Mayo created the system of Provincial responsibility for expenditure, an integral part of his scheme consisted of giving the Local Governments power to supplement the Imperial

subsidy by local rates. Two taxes were, as a matter of fact, imposed at first in Bombay. The Government of India shortly afterwards stopped this part of the programme. I do not know why—possibly from political motives or from fear that sources of revenue might be tapped which they desired to reserve for themselves. But India has now advanced, and His Honour the Lieutenant-Governor and his Council are surely as well able to devise suitable local taxation as petty municipalities which already exercise the power. My Lord, it is little less than a scandal that by the aid of nice conveyancing (is not the word 'nice' a pleasant one?) one should hear of wealthy Calcutta merchants disposing of property worth crores of rupees without paying any dues upon it to Government, or of a great nobleman giving a whole pargana to a relation and paying a conveyance duty of only Rs. 15 or Rs. 20. I daresay the Hon'ble Financial Member would give His Honour part of the probate-duties in return for 50 lakhs. Death-duties, as they are called in England (the term is not a very pleasant one), are taxes to which the people of this country have always been accustomed. The native name is 'nuzzerana' on succession. Let His Honour collect this according to old usage, and his treasury will overflow without any diminution of his popularity. His Honour could, I daresay, receive the offerings in Darbar, just as the old Subadars of the Delhi Empire did. An heir who pays half a lakh will receive a shawl and His Honour's congratulations. One who has paid a lakh, two shawls. One who has paid three, shawls and a diamond aigrette, and for larger sums, a high-sounding title might be bestowed in addition, and His Honour and the zamindars will part, both mutually satisfied. And then, if the Hon'ble Financial Member gives part of the 50 lakhs he has saved to Bombay and Sind, we shall all go away happy. I feel quite sure, too, if His Highness the Maharaja of Darbhanga will pardon a personal allusion, that from the knowledge we all have of His Highness' own unexampled generosity and his public spirit, the zamindars of Bengal will, if they resemble him in the very least, meet proposals like mine in a spirit of perfect fairness, though of course no one could expect them to like being taxed. That would not be human nature. I can quite realise that the Hon'ble Finance Member does not see the advisability of trying to impose local taxes himself. He would expose himself to mistakes and consequently to odium, and the Native Press would call him names. But I am sure of this, that if you call on Local Governments to make up deficiencies in Imperial grants by extra taxation of their own, of course under careful supervision and sanction, such a policy, more than any other, will make for Imperial economy. As long as the Hon'ble Finance Member's pockets are considered bottomless, so long will Local Governments have to play the ignoble and irritating rôle of the daughters of the horse-leech every five years, or indeed whenever more money is wanted. And we lose a deal of revenue by our obstinate adherence to Western methods. We might, for instance, make a revenue quite legitimately by taxing adoptions, as the king is authorised to do by the Shastras. The sort of thing we do tax is 'appointment in execution of a power, whether of trustees or of property, moveable or immoveable, where made by any writing not being a will,' or rather we mean to tax it, but neither tax-gatherers nor tax-payers understand such a highly technical term. So it cannot be a very fruitful source of revenue.

"Might I also invite the Hon'ble Financial Member to consider a second little question, *viz.*, whether the time has not come to relax the terribly light leading strings in which the Financial Department keep Local Governments as regards matters of petty detail. I don't refer to His Honour of course. He is on the spot, and has the great advantage of being able to go to the Treasury in person, if he suffers at the hands of the Financial Department. But since the time when Lord Lawrence told a Committee of the House of Commons that a Presidency Governor was too great a personage to be coerced merely for the trifle of spending a few lakhs without authority, the persistency of the Financial Department has thoroughly succeeded in curbing the desire of Local Governments to break rules. The Accountant Generals are stern, and a Local Government with the Accountant General by its side now-a-days resembles a little boy going out for a walk with his nurse. Supposing the

Local Government wishes to reimburse a man from Provincial money for some special labour or personal expense, or to carry at some unforeseen work which is needed in a hurry. The Governor asks, so to speak, his nurse: 'Please may I give my penny to that poor man or, may I buy that toy?' 'No, Master Governor-in-Council. I'm sure your kind grandmamma did not give you a penny for you to spend it in that way—it would be contrary to the Civil Account Code. Put it back again in your pocket at once or I'll tell her when we get home.' If the cast-iron rules of the Financial Department were relaxed in trivial matters, I am confident Local Governments would be happier, correspondence would be greatly lessened, and the Hon'ble Member would have more time to attend to matters of really Imperial moment. We all profess to lament over-centralisation—undoubtedly it takes the heart out of Governments and men. But, when you come to ask any one to decentralise and part with any power, he is so hide-bound by system and perhaps suspicious at heart as to how the power will be used by others, that he always says '*non possumus*.' It requires a very strong and determined man to decentralise.

"Now, my Lord, I come to thirdly and really lastly. I see that the widow's mite yielded by the Post Office now really shows signs of becoming a 'talent' within a measurable distance of time. It's not exactly a suitable time, when the Budget shows a deficit, to suggest more expenditure on salaries. Still I venture to suggest that the Hon'ble Member might spend a little of this widow's mite in improving the position of a most important body of men, the Superintendents of Post Office: the Post Office really works admirably and the work is now very onerous. But the pay of the Superintendent is the same as it was 25 or 30 years ago, before the Post Office took up its gigantic money order, savings bank, value-payable, telegraph, and other work. I know perfectly well that a maximum of Rs. 400 rising to Rs. 500 is sufficient for a number of men. They are not worth more, and if you were to make higher paid grades and you let such men go up by seniority, you might be throwing away money. But there are some valuable men, both Native and European, who are worth more and who have special qualifications and responsibilities. I mean men such as you would send on a Chitral campaign or mark for promotion to the position of Deputy Postmaster General. Depend upon it, unless you pay the Superintendents properly you will not get this class of men when you need them In Sind I am given a small allowance which I can distribute as I like to Native first class Magistrates in view of the great responsibility and extra work the possession of these powers entails upon them. Could not the Hon'ble Member give the Director-General of the Post Office a sum to distribute as personal allowances to selected Superintendents? It will be a cheaper way of doing what is needed than by raising the pay of the higher grades generally, as old fossils are sure to move up and fill them in course of time. Of course selection is to a certain extent invidious—but you can trust your Director-General, I should think. I should like to add, in saying this, that I hold a brief for no one. Whatever a non-official member may do, I cannot conceive a more improper thing than for an official member to come here and advocate pecuniary claims of individuals or grades. I have only met two Post Office Superintendents since I last came out to India, and only one of them even alluded to this subject. But I take a warm interest in my old Department: I am keenly anxious that it should not deteriorate, and I feel that the Hon'ble Member must do something. I know that the pay of postmen, of postmasters, and I believe of some Postmasters General has been raised, and rightly so. The Superintendents therefore should not, I submit, be left out in the cold."

The Hon'ble SIR HENRY PRINSEP said:—"My Lord, it was not my intention to trouble the Council with any suggestions upon the Budget, as I do not consider that it is a department of which I can pretend to have any experience. I leave it to others to deal with the various subjects, particularly affecting Bengal, to which reference has been made by my hon'ble friend on my right (the Hon'ble Mr. James), and I have no doubt when he leaves this room he will leave it a wiser and probably a sadder man. There was only one matter to which I wished to draw his particular attention. He seems to think that, whereas all the revenue was supplied by Bombay, all the necessities

were those of Bombay, and that Bengal does not contribute properly towards the revenues of the Government of India. I would specially direct his attention to a statement prepared by Sir James Westland many years ago, and which appeared in the Government Gazette—if I recollect accurately, about seven years ago—representing the amount realised by court-fees in the various Presidencies, and *per contra* the expenditure of the Courts. Now this is a matter upon which we Judges of the High Court felt very strongly, as representing the judicial administration, and we have always felt that, whereas the revenue in this department was really supplied by Bengal, it was swallowed up by other Presidencies, and they had considerable difficulty in obtaining what we considered to be necessary to Bengal. It was, however, represented to us that this was an Imperial question, and that they had to consider the aggregate as representing the revenue and the expenditure. I wish it to be understood that I do not accept all the items which have been charged against the Courts in that statement, but let it stand at what we found it. We found—and I hope my hon'ble friend on my right will recognise this—that whereas we had in Bengal a surplus revenue of over fourteen lakhs, in Bombay the excess of charges over receipts was over ten lakhs. I leave the other matters represented by my hon'ble friend for others to notice."

The Hon'ble MR. STEVENS said :—"My Lord, I do not wish to occupy much of the time of the Council, or to interpose more than a very few remarks before those important criticisms to which I doubt not the Budget will be subjected by those who, from their special knowledge, or from the interests which they represent, have a better title to be heard. Nor will these remarks have more than the very small authority of the individual speaker, for in the presence of His Honour the Lieutenant-Governor, who is responsible for the finances of the Province, it would not become me to assume a representative character. And yet it would not be right, I think, for me to remain altogether silent as to the financial arrangements which (notwithstanding the Hon'ble Mr. James) appear to press so heavily on the Province in which I serve. I confess that I had not for a moment anticipated the scarcely serious attack which my friend Mr. James, as a 'plain man,' has made on Bengal. I think I may leave it, however, to the 'expert,' the Finance Minister, who knows Bengal, to defend himself against the charge of undue partiality to the Province. My own complaint is that he has been severe. It seems to me, my Lord, that a person, having no other knowledge of the facts than that furnished by the Statement of the Finance Minister, would not unnaturally think that Bengal was in the proud and happy position of a Province which has had all its reasonable wants supplied, and has been spending money on a scale which, we were told, 'is not the result of any specially-enforced economy.' But it will not have escaped notice that, during the first three years of the quinquennial period, the balances were but little in excess of the amount which is taken to represent the minimum compatible with the convenience of the administration, and there could be no greater error than to suppose that there are not highly important improvements, necessary to good government, for which money is urgently needed. I do not propose to enumerate these—still less to support their claims to consideration by elaborate arguments which could have no immediate practical effect. I will mention but one or two.

"In the first rank I would place the reconstitution of the General Hospital, and the improvement to something approaching an European standard of the other large hospitals in Calcutta. The condition of these most important institutions is notoriously very unsatisfactory: yet they are not of mere provincial utility, as regards the patients who resort to them, or as regards their educational functions; and it is not too much to say that, situated as they are in the metropolis of India, and manned, as they are, by officers selected for their efficiency by a central authority, they ought to be models for the Empire. That they should be thoroughly adapted for their purpose demands, not merely a preliminary outlay, but a persistent and recurrent expenditure.

"The case of the ministerial officers has always seemed to me to be, in the main, very hard for them and injurious to the interests of Government. Salaries were for the most part fixed long ago: but, while these have remained practi-

cally constant, the expense of living has been gradually and steadily rising, so that the standard either of living or of honest service must have of necessity fallen. I do not attach much weight to the argument that when a post of even trifling value is vacant a host of applicants at once appears. For this there may be more than one reason; but the obligation remains on Government to pay its servants enough for them to live on with sufficient comfort in their several stations. In this direction, then, there is ample and urgent need of improvement; and here, too, the necessary expenditure is not spasmodic and occasional, but continuous.

"I am confident that the personal recollections of the Financial Member of his own experiences as a Magistrate in Bengal will support me in my assertion that, considering the dangers, the responsibilities, the powers, and the temptations which are inseparable from police work, the officers of that Department, especially those in the lowest grades, are most inadequately paid. Here, too, it is constant expenditure that is required.

"Another serious want is money for the assistance of local bodies for sanitary improvement, especially for the provision of drinking water. I listened with interest to the remarks of the Finance Minister on this subject, but he has failed to convince me. It does not follow that a grant in aid of the supply of drinking water in one province comes from the tax payer of another. If aid is given in Bombay, there are tax-payers in Bombay. If aid is given in Bengal, there are tax-payers in Bengal—many more of them than in any other Province. The Commissionership of Patna alone contains nearly as many inhabitants as the whole Presidency of Bombay! The requirements of modern sanitation are growing more rapidly than the resources of these local authorities and, if they are to be met at all, demand the assistance of the Government. Such assistance, spread over the whole area of this great province, calls again for increased and continuous expenditure. These, my Lord, are a few instances which will tend to dispel the belief, if any one (even my friend Mr. James) seriously holds it, in the financial comfort and ease which pervade the Bengal administration.

"It has, I imagine, been the melancholy duty of most of us to offer condolences. Sometimes these are little more than forms, as perhaps we feel that there are circumstances which may tend to mitigate the distress of those with whom we condole. But at other times we are most sincerely sorry, and are distressed to feel how utterly ineffectual our expressions of sympathy must be. I believe that the latter conditions were those in which the Hon'ble Member in charge of the Finances penned the 72nd paragraph of his Statement. I shall be surprised if His Honour the Lieutenant-Governor derives any comfort from these condolences, however ingenious and sympathetic he may deem them. I do not think that he can have been satisfied when he heard that, in relieving him of his heavy balance, and reducing it to half that which is the normal minimum, the Finance Minister has, after all, not taken from him anything that is properly his. It is (we are told) 'not the produce of any Provincial revenues in the ordinary sense, but of the Imperial grant out of railway revenues, not under Bengal administration, which three successive good jute seasons have so enhanced as to give the Province a profit in the three last years of Rx. 353,500.' But I think that the view which we in Bengal must take of the transaction is this: the railways in question are situated wholly within the Province, they had been managed provincially until for the sake of convenience their administration was made Imperial. Whether the administration is Provincial or Imperial is not for present purposes a matter of any consequence. It is an accident. But the essence of the case is that the railways are in Bengal territory, and parts of them were constructed from Bengal funds; they are fed by Bengal roads and communications, and the profits are directly derived from a Bengal industry. To surrender revenue thus obtained is not, except as a matter of words, to make an Imperial grant, but to give back to the Province profits which have actually accrued in it, and from it.

"The present season so prominently marks the enormous advantage of railway extension in India that no less suitable time could be chosen for questioning the propriety of such a policy. At first sight, however, the thought suggests itself whether in a time of calamity, such as that through which we are

now passing, the programme recently sanctioned might not be postponed till a more favourable season, rather than cripple Provincial revenues and impede progress in other directions. But the subject of railway extension is Your Excellency's peculiar care, and it is not to be doubted that this obvious suggestion has received such consideration as it may deserve and has been rejected on good and sufficient grounds.

"In conclusion, my Lord, I can only hope that returning prosperity may speedily place my hon'ble friend the Finance Minister in such a position that he may not have to consider what interests he must sacrifice, but how he may best distribute his benefactions. When this happy time arrives I trust that he will remember, and remedy, the injuries which he now feels himself compelled to inflict on Bengal."

The Hon'ble JOY GOBIND LAW said :—"My Lord, there is an idea abroad that, considering the times, the programme of railway extension as indicated in the Financial Statement is rather high. I can well imagine that a year ago the Government of India, influenced perhaps to a certain extent by the exceptionally cheap rates for money then prevailing, formulated a scheme of extensive railway construction to be spread over three years. But times have changed since, and the cost of famine relief and the attendant loss of revenue will impose a heavy burden on the finances of India. The exchange and the last loan conversion have no doubt brought a certain amount of present relief, but the latter operation has not been, it seems, an unmixed benefit. Rightly or wrongly, people assume that a Government, when it raises a loan, without any announcement of its temporary character, will let it stand for a reasonable period, and will not seize the first favourable opportunity to reduce its rate of interest. They are persuaded that a Government cannot act in the same way as an ordinary private financial concern might see fit to act. No one disputes the abstract right of the Government in the matter; but, my Lord, there are other considerations which I need not specify, apart from the question of interest, which I have no doubt were duly weighed before coming to a decision. Leaving these other considerations aside, and looking at the operation solely from a financier's point of view, the result does not appear to have been altogether a success. As every one knows, India is not a country where any amount of spare capital was available, and as financiers in Europe have apparently not taken kindly to our rupee 3 per cents., the result has been that, instead of their being chiefly absorbed in Europe, and thus clearing the way for fresh loan operations, a good portion of these, I understand, stick to us, and refuse to leave us.

"Closely connected with the loan operations is another question, which, though it is nothing new, is one in regard to which it is desirable the public should have some information. I am referring to the subject of a sinking fund. From the way that Indian loans are being piled up, this question at one time or other must have engaged the attention of the Government, but the public, so far as I know, are unaware of the considerations which have influenced the Government in apparently dispensing with it altogether, if the special famine insurance fund is excepted. Strategic railways and similar works, more than any other, seem to stand in need of such a fund, inasmuch as they are not expected to be self-supporting.

"In what I have said, I do not wish to be misunderstood, my Lord. I am not expressing any definite opinions of my own on the questions I have raised, or finding fault with the Hon'ble the Financial Member. I am merely seeking for information while indicating the points which seem to require some elucidation.

"One word, my Lord, in regard to the famine. In the midst of the great and tremendous calamity which has unfortunately visited the people of this country, it is some consolation to them to be able to turn to and observe the deep and active sympathy which it has evoked in the country of our Queen Empress, in the great colonies and dependencies of the Crown, while the manner in which this dire visitation, unprecedented as it is in its extent, has been met and brought under control, will ever be a subject of admiration to my fellow-

countrymen and to the whole civilized world, nor is our admiration and gratitude the less due to those officers and men, from the highest to the lowest, who, surmounting all initial difficulties inseparable from such operations, are now zealously and indefatiguably devoting themselves to the noble work of extricating their fellowmen from a situation the horrors of which it would be difficult adequately to conceive.

"Before concluding, I wish to refer to certain observations which have been addressed to this Council by the Hon'ble Mr. James. From his references to the permanent settlement he is seemingly unaware of the benefits, from a revenue point of view, which it has conferred in former years. His observations in regard to Bengal remind me of a remark made by the Hon'ble the Financial Member, that the Indian Government is expected to produce coins by some sort of legerdemain. His remarks would seem to me to be applicable to the Hon'ble Mr. James' references to Bengal."

The Hon'ble PANDIT BISHAMBAR NATH said :—"First of all, I respectfully decline to take the part of a slaughterer, as I profess to be a person of a better avocation if not an honourable one.

"It may be, that the annual Financial Statement cannot be conveniently prepared nearly before the end of the official year, the task being no doubt a Herculean one, it is a pity that the discussion of the Budget should thus come on as a parting function at the fag-end of the session here.

"The occasion of the presentation of the Statement for discussion is certainly not, a field-day, as it were, simply for airing our views, or as is supposed, for giving a vent to pent-up gas. The importance of the duty renders it desirable to bring a calm mind to bear upon the consideration of the several complex arrangements which the Statement summarises on the basis of voluminous accounts.

"As the Budget is overshadowed by an immense loss of Revenue and Expenditure due to famine, I think I am not called upon, like last year here, to indulge in a chorus of conventional felicitations; nor I see any necessity for passing criticisms upon results brought out on the assumption of a probable forecast, which is likely liable to unforeseen variations.

"Though not an expert in Indian finance, I have tried to grasp the broad outlines of the Budget Statement. As I do not propose to go into figures or matters of detail, I shall simply touch upon such points as might occur to me. But, before doing so, I think I may say incidentally that I have been much struck, on referring to the Financial Statement for 1896-97, with what the Hon'ble Sir James Westland, with a statesman-like sagacity, was pleased to observe in his 'Conclusion,' rather unconsciously. He said, 'I refrain from any prophecies as to future.' These pregnant words were, I now see, really ominous. And had it not been for his modest reluctance to dive into futurity then and there, the situation, I dare say, would not have proved so disastrous as it is now.

"As we all know, not long after he had spoken thus, signs of trouble began to manifest themselves. The country has since passed through all the stages of widespread distress, till now, when we find nearly the whole country is suffering terribly from the effects of what has been described as the greatest calamity of the century.

"It is not for me here to say what I think will form a proper theme for an impartial historian, when he shall have to add, as a redeeming feature, a bright page to the otherwise dark narrative of a gloomy event, by telling the posterity, how gallantly and bravely Your Excellency's Government, conjointly with the whole Imperial Administration, met and battled with the stern visitor which is still, unfortunately, stalking and playing havoc in the land.

"While a deep sense of sympathy has been touchingly evinced by Her Most Gracious Majesty the Empress of India, with her characteristic virtue as our Soverign Lady, the long arm of private benevolence, as Your Excellency rightly expected, has been sympathetically outstretched in time; and a bounteous stream of public charity has flowed, as it were, for prompt relief,

from the direction of the United Kingdom of Great Britain, its dependencies, Russia and other far-off countries.

"As famine is the prevailing feature of the Budget Statement, I cannot help observing here, parenthetically, though by no means in a captious spirit, that, by a irony of fate, India is under an unlucky star. In spite of all possible efforts by our Government for expanding the railway and irrigation systems, and adopting various other preventive remedies, famines, more or less destructive, do recur periodically in one part of the country or other, with a deplorable frequency. During the preceding quarter of the present century there have been, if I mistake not, no less than about seventeen famines, though not so severe or widespread as the present calamity has proved to be. And there is no use in minimising the gravity of the situation by disguising the fact that the fatal effect of the famine and its inevitable consequences, upon the famished people in the more affected tracts, has been deplorably immense.

"The decrees of Providence being inscrutable, the recurrence of these terrible visitations is attributable, apparently, to the fact that the bulk of the peasantry and people, poor as they are, pursue and depend chiefly upon agricultural operations, the result of which is generally uncertain, and influenced by causes beyond human control. The effect of such calamities is disastrous. What the country gains slowly in the growth of its population and development of resources, as a natural consequence of an unparalleled reign of peace, attended with its incalculable blessings, it loses enormously, in life and wealth, by frequent attacks of distress and suffering.

"A question naturally arises, why is it so? The answer, I submit, involves many grave considerations regarding which there is yet a great divergence of opinion: and as the Financial Statement is not the place in connection with which such matters should be discussed with propriety, I purposely refrain from dwelling upon that vexed question. I may, however, be permitted to say that the oft-repeated argument 'that there is not a single country in the civilised world where the amount of taxation is so small as it is in India' loses much of its force when the comparatively great poverty of its masses is considered.

"Proceeding now with a cursory review of the several heads of account treated in the Budget, I regret to notice, that instead of a complete restoration of finances, affected as they were much in the year 1894-95, the direction of the financial position of the Indian Government during the past period under review has suffered so serious a reverse that not only the hopes of that restoration have been absolutely frustrated, but that there is reason to apprehend that all furture progress must stand still to the great detriment of the several departments where it was needed most.

"The last Financial Statement, as we remember, shewed a large improvement, in that the Chitral Expedition was paid for out of Revenue Account; the Famine Insurance 'Grant' or 'Fund,' was restored, and Provincial contributions were repaid. Thus, there was a surplus over and above, approximating to a crore and a half of rupees. The elasticity and buoyancy in finance, that characterised the last Budget, are no longer the reassuring features of the present Statement. The famine expenditure that has to fall on the Imperial Account, apart from that charged in Provincial balances, as well as for land improvements and agricultural advances, is, I gather, five and a half crores of rupees.

"While fully appreciating the determination of the Government of India for preservation of life against starvation, it is a pity that the Famine Code should have provided 'subsistence ration' alone as being quite sufficient for that purpose, leaving the private or public charity to supplement such bare rations with ordinary comforts, equally necessary for preserving life in distress.

"Dealing with the Provincial finance, I notice that His Honour the Lieutenant-Governor of Bengal was pleased to say here, last year this time, 'that the Supreme Government ought not to sheer too closely each quinquennium.' I am glad to find that the Government of India have in settlement of such finance acted more liberally. As regards the North-Western Provinces and Oudh, an enhanced assignment of five lakhs a year has been made to the amount allotted, besides four lakhs of rupees for the year 1897-98, for enabling

His Honour the Lieutenant-Governor there to establish his District Board Funds on a financially independent basis.

"If, as observed in paragraph 58 of the Statement, the state of Provincial finance in the North-Western Provinces had begun to give anxiety even before the outbreak of famine, and as the result of an enquiry made in 1882, a reduction of taxation in these provinces and Oudh was thought necessary, the reduction then contemplated should be effected now, without waiting for a further expansiveness of Land or Excise Revenue, which is not likely to advance under the present adverse conditions.

The extra grant for the reformation of police in the United Provinces is, no doubt, a move in the right direction. Additional efficiency of the police means additional safety to the life and property of the people, and, as such, it is always welcome. On behalf of the Provinces, which I have the honour to represent, I take this opportunity to thank Your Excellency's Government for lending this extra help for the reformation of the police even at a time when there are other great demands upon the public purse.

"With Your Excellency's permission, I shall also beg leave to suggest that at a time of such widespread distress, when every penny at command has to be husbanded to save human life, the replenishing of the military stores might be minimised, and that, as far as it may be practicable to do so, local supplies might, with advantage, be utilised, which is likely to offer additional help indirectly to the suffering millions.

"Not being an expert, I am unable to speak with confidence on any financial question. I may, however, venture to suggest further that the Budget Estimate for 1897-98 of Land Revenue, 'including that due to Irrigation for North-Western Provinces and Oudh,' has been put down at a rather high figure. In the Budget Estimate of 1896-97 it was put down as Rx. 6,113,900, whereas in the Revised Budget of the same year I find it has come down to the low figure of Rx. 4,914 200, or less by Rx. 2,199,700. The present widespread distress is not the only calamity which the people in that part of the country have to meet. Successive bad harvests in previous years have affected their condition seriously. Even if we have a good harvest there in the next autumn, it could bring within their reach only the means of bare subsistence. So that collection of a sufficient amount of revenue cannot be anticipated with certainty. I should, therefore, think, it would be more safe to estimate the Revenue at 5 instead of 6 crores, which is close upon the figure in the last year's Revised Budget; and, if we err in this estimate, we will have the consolation of our having erred on the safest side.

"It is remarkable that the Land-revenue as assessed in respect of the North-Western Provinces exceeds that of all the other Provinces, including the wealthy and important maritime Provinces of Bengal, Bombay and Madras, and that there is still a tendency towards over-assessment at each new settlement.

"Speaking now generally about the rate of Exchange, I confess I am unable to say anything with the authority that would attach to the opinion of a skilled expert. The rise in the rate of Exchange, as indicated in the Statement, is calculated to secure savings as regards sterling payments, pay of the British troops and in the cost of exchange compensation allowance. But the uncertainty of saving or losing in respect of so slippery an item is uncontrolable, and must continue to be so, unless some relief should accrue hereafter, by a proper adjustment of the proportion of expenditure, as regards what are called the 'Home Charges.' Besides the inherent uncertainty, there is a complex problem concerning the universal adoption of a gold standard, which is not capable of an easy solution; while the controversies raging between the monometalists and bimetalists or the so-called 'Silverites' and 'Goldbugs' are extremely perplexing. The tone of European Bourses, ever varying and fluctuating, is another element in unsettling the rate of exchange, besides the fall in the value of silver.

"As regards the amount payable on account of exchange compensation allowance, a saving is expected by a rise in the rate of exchange. The burden itself is a recent imposition, being the outcome of a rather modern demand. If the allowance is to remain a charge, the revision of the pay-sheet, as regards

the high dignitaries of the State, is, I venture to submit, necessary, by way of a compensating relief, for the reason that conditions of life in this country have now been largely revolutionised in consequence of the increasing facilities for shortening the period of voyage; while the Indian Civil Service, which has a just reputation of being regarded as the best in the civilised world, is undoubtedly the highest paid.

"As to the large item of ordinary Military Expenditure, including its various heads, which involve no inconsiderable amount of outlay, no material reduction can safely be proposed. Our army service, being the bulwark of our defence, it is necessary in the interests of peace that the strength or efficiency of the army should in no way be impaired. But over and above this expenditure, the payments in England to the Imperial Government on account of disbursements by the War Office in respect of Her Majesty's British Forces serving in India are enormous, and to these disbursements are to be added the charges incurred for Special Defence Works and Frontier Defence, besides a considerable amount of Exchange payable in England.

"As the matter is already under consideration before the Royal Commission of Enquiry into the Civil and Military Expenditure in India, now sitting in England, any observations upon it would be considered superfluous. I only crave permission to quote here what Lieutenant-General Sir Henry Brackenbury is reported to have said recently in his evidence before that Commission.

"The portions I propose to quote are these, *viz.*—

'But I cannot but feel that Britain's interest in keeping India under Britain's rule is enormous. India affords employment to thousands of Britons. India employs millions of British capital, and Indian commerce is of immense value to Great Britain. Therefore it seems to me that India is being held by Great Britain not only for India's sake but for Great Britain's sake. Great Britain should pay a share of the expenditure for this purpose. In estimating what that share should be, I think that England should behave generously to India, because England is rich and India is poor. * * *

'Another reason why England should be generous to India is that India has no representation. * * * But, where a nation is practically arbitrarily governed, the Government should behave generously to the nation governed * * *

'There is no one who holds more strongly than I do the immense advantage to India of British rule, but I also hold that it is an enormous advantage to England to have India.'

"Moreover, contrasting broadly the amounts spent respectively on account, of the relative means of comfort for the two sections of the Army, European and Native, one is struck by a fact which, though insignificant, does intrude itself upon one's notice. While every care is taken, as a matter of sheer necessity, for decently housing the European privates in palatial barracks, with all appliances for ease, their comrades, the Native soldiers, had, until recently, to build their own lines, receiving a hutting and repair allowance. The old practice is now being gradually replaced by the new system, under which lines, on an improved pattern, are being built by Government.

"From a summary of the principal features of the Statement under review it is manifest that the Revised Estimates of the year 1896-97 and the Budget Estimates of 1896-97 show considerable deficits, the cause of which is the failure of the monsoon and the consequent scarcity and famine. There is, besides, a loss of Land, Railway and Opium Revenues, with other losses and increases of expenditure. The summary closes with a remark that, while it is intended to raise a loan of Rx 4,000,000 in 1897-98, 'full liberty is reserved with the Government to vary this intention in any way or to any extent which may be expedient.' I hope the reservation of this full liberty means anything but the imposition of a fresh tax.

"In having ventured to travel so far with the foreging observations, it will, I hope, be not supposed for a moment that I have attempted to arrogate to myself the *rôle* or position of an instructor, which, to be sure, I do not pretend to fill. Actuated, as I am, by a sense of duty, I have thought it proper to submit what I had to say, without presuming to claim infallibility for the views I have expressed."

The Hon'ble MR. SAYANI said:—"My Lord, before offering my observations on the Financial Statement itself, I beg leave to submit a few suggestions.

"The time allowed to members to peruse and digest the Financial Statement and to consider the same so as to be ready to discuss it in this Council seems to me to be too short. The usual course adopted appears to be to present the Statement on a Thursday and to bring it on for discussion that day week. Practically, therefore, only six days are allowed. The Statement contains a mass of figures, in the shape of accounts or actuals for the preceding official year; the estimates and revised estimates, that is, approximate figures, for the current official year about to close; and the budget or estimates for the official year about to commence. The reading and digesting of the whole of this mass of figures necessarily takes up a considerable portion of the time allowed, and, practically, there is very little time left to communicate with our respective provinces, either for information or advice. The Statement is, I believe, ready at least three days before it is actually presented in Council, but is not placed in the hands of members as soon as it is ready, as it is considered advisable to publish it simultaneously in all the important centres. My humble suggestion is that the Statement may be presented on a Thursday, as has hitherto been the practice, but that the discussion thereon may be had on the Saturday instead of on the Thursday week following, as is the case now. The course I am suggesting may possibly necessitate a delay of two days in the removal of Government to the hills, but I humbly trust that in the interest of members, as also of the public, your Lordship will be pleased to extend a sympathetic consideration to my humble suggestion.

"As to the publication of the Statement, the present practice seems to be to place copies in the hands of the Accountant General in each presidency town with instructions to deliver them to the public press as soon as the Statement is presented in Council. I humbly suggest that important public bodies in each presidency town may also be allowed to obtain copies simultaneously with the public press. Under the present practice the public press, enterprising and public-spirited as it is, can only publish, not the whole of, but only extracts from, the Statement, and that too, not on the same, but only, on the following day. If my humble suggestion is acceded to, important public bodies will be afforded an opportunity, if they so desire, of offering criticism themselves, or of communicating instructions to the representative of the province on this Council.

"Coming now to the Financial Statement, its most important features are (1) (*a*) famine and its ruinous losses and heavy additional burdens and (*b*) plague and its paralysing effects, and (2) renewal of provincial contracts. The Revised Estimates of the current, and the Budget Estimates of the ensuing, years are grievously affected by the two dire calamities. 'The main feature,' says the Summary, 'of the Revised Estimate—is the loss of revenue and the expenditure due to famine'; and 'the revenue forecast for the new year is necessarily in sombre colours.' The Statement is full of constant references to 'losses due to the effects of famine', 'the effects of present scarcity', 'the amounts provided for famine relief', 'the stoppage of trade in consequence of the plague', 'the very peculiar circumstances of the coming year', 'the restriction of programme by the various local governments enforced by the great reductions that famine expenditure has made in their available balances,' and it fitly winds up by declaring 'our prospects are for the present marred by the occurrence of widespread famine, and of pestilence', and it is significantly added that this pestilence 'is as yet confined within a narrow area,' thus implying that gloomy as the prospects are, they may yet be further darkened. Indeed, the Statement is a perfect tale of woe, and that boasted normal elasticity of revenue, so frequently and exultingly put forward in former statements, is conspicuous by its absence; the only ray of hope is that afforded by favourable exchange, and this is a mere accident.

"Coming to the famine it was pointed out in the despatch of the Secretary of State directing the appointment of the last Famine Commission that

'it is evident that the protection of the people of India from the effects of the uncertainty of the seasons will constitute in the future no inconsiderable portion of the work of the Government. It is therefore a duty to collect with the utmost care all information which may assist future administrators in the task of limiting the range or mitigating the intensity of these calamities;' and the Commission came to the conclusion that all Indian famines were caused by drought and they expressed a hope that in future famines would 'be gradually diminished in intensity, partly by the more efficient character of the relief given, partly by the extension of the means of communication and development of internal trade, and partly by that greater preparedness of the people to meet them which grows from the increase of thrift and resourcefulness, and the accumulation of capital due to a settled and civilised Government.' They also said that 'a main cause of the disastrous consequences of Indian famines, and one of the greatest difficulties in the way of providing relief in an effectual shape, is to be found in the fact that the great mass of the population directly depends on agriculture, and that there is no other industry from which any considerable part of the community derives its support' and they add 'the complete remedy for this condition of things will be found only in the development of industries other than agriculture and independent of the fluctuations of the seasons,' that 'with a population so dense as that of India these considerations are of the greatest weight.' They remark that 'it is not surprising that in a country thus situated material progress is slow.' They go on to say, 'The protection of India against the consequences of drought so immediately depends on the provision of improved means of communication and the extension of irrigation wherever it is practicable with advantage,' that there is a general agreement as to prudent extension of railways and canals. They point out that 'at the root of much of the poverty of the people of India, and of the risks to which they are exposed in seasons of scarcity, lies the unfortunate circumstance that agriculture forms almost the sole occupation of the mass of the population, and that no remedy for present evils can be complete which does not include the introduction of a diversity of occupations, through which the surplus population may be drawn from agricultural pursuits, and led to find the means of subsistence in manufactures or some such employments.' They also make other valuable and important suggestions, but they need not be here repeated.

"Now the most important question at the present juncture arising on the Financial Statement under discussion naturally is, how far have the recommendations of the Famine Commission made for the purpose of 'limiting the range' and 'mitigating the intensity of famine' been carried out?

"So far as railway communication is concerned, it must be cheerfully acknowledged that Government has fully adopted the suggestion and taken all possible measures to carry it out to its fullest extent, and your Lordship has been the staunchest supporter of a most vigorous policy and the lines which have been already laid and which are to be laid in the near future will be amply sufficient for all practical purposes, so far as they are required for conveying grain from the prosperous to the suffering districts.

"As to irrigation, the suggestion does not seem to have been received with the same favour as that regarding railways. The Commission regarded irrigation as one of the most important remedies against famine. In fact, they speak of railways and irrigation together, and their reason for so doing is easily understandable. Railways, undoubtedly, render the important service of conveying grain and distributing it wherever it is wanted. But irrigation is capable of rendering a still more important service. It is instrumental in producing and in increasing the produce of grain, and the service, therefore, which irrigation is capable of rendering is in all times, and especially in times of famine and scarcity, of vital importance. Indeed, so far as famine and scarcity are concerned, railways are in a sense only auxiliary to irrigation works, for if there is no grain in existence, the service of railways cannot be utilised at all. Further, the cost of construction, in the case of irrigation, is almost entirely spent in the country and does not, therefore, go to swell the drain of wealth outside the country, as is to a very considerable extent the case in the cost of construction of railways. Further the cost of irrigation

is cheaper than that of railways. Moreover, it is exactly in the times of famine and scarcity, when all other kinds of revenue, including railway revenue, suffer more or less, that irrigation revenue, as has been well pointed out in the statement, shows to best advantage and is, therefore, doubly welcome. It is to be hoped, therefore, that as soon as the hands of Government are freed from the present exceptional work and anxiety on account of the terrible calamities of famine and plague now unfortunately raging in the country, Government will see its way towards forming and pursuing as vigorous, if not even a more vigorous, irrigation policy as your Lordship has for some time past and is now pursuing in respect of railways.

"It is complained, however, in disparagement of a vigorous irrigation policy that in several cases the financial results of irrigation works have not been satisfactory. It is true that the accounts of several irrigation works do not show any appreciable returns, but such results are not only unexpected but also unnatural, for there is nothing inherent in the nature of the works themselves which should necessarily cause this result. In fact common sense and common experience of all ages agree in expecting fair results from all ordinary irrigation works, and it is a marvel why some of our works of the present day should be so disappointing. At any rate the subject is worthy of careful inquiry and consideration, and it is of the utmost importance both to the people and to the Government to shift the matter to the bottom.

"Passing now to the kindred subject of tanks and wells, it was observed by the Famine Commission that 'the cultivators and landlords do something towards the improvement of their land, but mainly in their own traditional way which mostly takes the form of sinking wells, planting mango and other fruit-trees, making tanks and reclaiming waste land.' But the cultivators and even a large portion of the so called landlords are poor. They are 'now in a state of collapse, from chronic destitution and indebtedness, a ready prey to famine and pestilence.' In fact the Indian rayat is as 'ruined, despairing, and embittered' a human being as can, possibly be imagined. Poverty now overshadows the land which was once deemed to be a field of gold. The correctness of this statement can by facts and figures, be proved up to the hilt, and though often theoretically denied, has as often been admitted in practice, and the point seems now to be conceded by the highest authorities. Indeed the poverty of India is staring Government in the face. It is this poverty which at the first blush of the present famine sent up tremendously the prices of food-grains and threw millions of people on the hands of Government and compelled us to appeal all over the world for help. But if further proof is still required to establish the fact, it may be mentioned that in the United Kingdom, where land is not superior to ours, and the physical and climatic advantages not greater, the agricultural earnings per head per annum come to about £4 and the total earnings to £34, while in India, the whole of the total earnings, including agricultural and all the rest, come to ₹27. Indeed years ago the Famine Commission said 'Of these faults' the Indian cultivator 'is generally conscious, but they are largely due to his poverty, and it is of no avail to ask him to correct them as long as he is unable to buy and to feed more and stronger bullocks, to save his manure,' etc. Under these circumstances, Government will do well to devise some measure by which agricultural indebtedness may be gradually diminished and ultimately cease to exist. And in this connexion I will humbly urge that suitable agricultural banks may be established and a permanent settlement with assessment in kind on a sliding scale may be substituted in lieu of the present rigid system of payment in cash. I have every hope that, Government, humane and enlightened as it is, will do everything in its power to help the present sickly and debilitated population to get out of its present pitiable and miserable position and under improved conditions to develop its energy now dormant, and to gain its physical and mental strength, so as materially to contribute towards the general prosperity of the country, to offer a much wider market to England and to be a source of strength to the rulers.

"I will here refer in passing to the remark lately made by a high authority that there could be no remedy for famine in India. With all due deference to that authority, I submit that famine in India can be remedied, even most effec-

tually; in fact a higher authority still has many years ago already observed, depend upon it, the true remedy against famine and scarcity is the frugality of the people. The people ought in years of plenty to make money enough to lay up against these times of famine,' the people should be placed in a position to be able to exercise frugality. The Famine Commission refer to the 'accumulation of capital due to a settled and civilised Government,' but, on the other hand, there are the counteracting elements of a costly foreign agency, the consequential large annual drains from this country, imperial military policy with its scientific frontiers and constant border wars. It is to be hoped, however, that these counteracting elements will gradually diminish in strength and also that the labours of the expenditure commission now sitting in England will lead to some tangible relief.

"Coming now to the plague, being the other cause affecting the Budget, it will be readily admitted that, besides being a most fatal disease, it causes considerable loss of revenue in many different ways and also tends to paralyse the commerce of the country. It is the interest of Government, therefore, to make a careful inquiry into the causes which create or favour the plague, and to take all possible measures to mitigate and to check it and to prevent its reappearance. It has been observed by Sir William Hunter that 'the chief cause of apprehension arises from the close connexion of the Black Death in all ages and on both continents [Asia and Europe] with poverty and bad or insufficient food.' In fact, it is, very largely, the outcome of poverty. The statistics in Bombay establish, beyond doubt, the immunity of the European community in Bombay from this disease and thus confirm the above opinion. It follows, therefore, that so long as poverty prevails in India, plague cannot be eradicated from the country, and herein we have an additional reason for making most serious efforts to improve the condition of the *rayats*. Your Lordship recently remarked in another place, 'A university, like every public body, must move with the times. A policy of stagnation in a university, as elsewhere, would justly be termed a policy of despair.' It is to be hoped your Lordship's Government will not allow the country to remain stagnant, much less to fall back, but will do everything to enable it to move with the times, so as to be, if not abreast at any rate, within a measurable distance, of the nations of Europe.

"Referring now to the provision made in the Budget for railways during the ensuing year, I have already alluded to the recommendation of the Famine Commission. Railways are, moreover, useful in opening the country. The question, however, arises, whether in this extraordinary year of famine and plague, and when moneys will have to be borrowed both in England and in India, railway extension should not temporarily be stopped, only to be renewed next year, when it is hoped, better times will come. The reasons for and against such temporary stoppage seem to me to be evenly balanced; on the one hand, a policy when once deliberately adopted should be carried out, moneys can be raised on advantageous terms, employment will be given to those who on account of famine or scarcity have been thrown out of employment. On the other hand, the circumstances of the country at the present juncture naturally plead against running into further debt.

"Coming now to the question of Provincial Contracts, it will be readily admitted that this question is of vital importance to administrative progress and is, therefore, deserving of serious consideration. Our system of Provincial finance is not free from fault and cannot conduce to economy in financial administration, nor favour the progress of internal development or administrative improvement. Unequal and unfair apportionments of revenue as between Imperial and Local needs, on the one hand, and as between one province and another, on the other—a standing source of irritation and discontent in itself—short-term settlements not calculated to inspire a sense of security or certainty, periodical re-adjustments of assignments generally resulting in curtailment of provincial resources and impairing the continuity of Provincial work, extraordinary provincial contributions levied apparently without convincing reason or clearly demonstrated necessity—these are some of the features of the system, and there is no wonder that they reduce its value and in its practica

working do not show it to much advantage. In fact our present arrangements do not tend materially to promote provincial progress as was originally intended, but, on the other hand, by dissociating power from responsibility and leaving the provincial administrations with uncertain and inadequate resources to meet the requirements of their respective provinces, have simply served to bring to the Imperial Government administrative relief and a freedom from financial anxiety in respect of internal progress which the conditions of the case scarcely justify and tend moreover to a diversion of its energy and funds to less legitimate objects. In short, if the system of the provincial finance is at all to realise the high expectations of its authors and be a real benefit to the country, it requires, in the light of past experience, a thorough revision.

"The question may be viewed from two different standpoints :—

(*a*) As a question as between the Imperial Government on the one hand and the provincial administrations on the other, collectively :

"(*b*) As a question as between one province and another.

A far too large a proportion of national income, about two-thirds of the total revenues, is reserved by the Central Government to itself for the general work of the country. Under our present arrangements the Imperial Government has charge of debt, army, foreign relations, railways, irrigation works, post, telegraph, mint, etc., while the entire work of internal ordinary administration is left to the provincial governments—a division of services as between the central and local administrations, much the same as in federal states, and yet in the German Empire, only 35 per cent., and in Switzerland and in the United States, only 50 per cent., of the total revenues are, it is believed, appropriated by the Central Governments. If that is so, surely in a country so circumstanced as India is, and where internal improvement is an object of such paramount importance, a financial system which leaves so little for local requirements cannot be a right one. Our Imperial expenditure, absorbing two-thirds of our national income, is accordingly beyond our means and out of all proportion to what we spend for local purposes.

"While our national revenues are expanding the provincial governments hardly get their fair share of the increase, and the necessary result is that the internal progress of the country is seriously retarded. Thus while our revenues, exclusive of railway receipts and local rates, have increased during the past fourteen years by about fifteen crores, the provincial share of the increase is only about five crores.

"Our provincial assignments, moreover, already so meagre and inadequate for local purposes, and so slow in their increase, are liable to curtailment on periodical revision, which introduces an element of uncertainty calculated to paralyse all solid advance and was not contemplated in the original scheme. Sir David Barbour is strongly opposed to it as calculated to take away all incentive to careful and economical management and to interfere with the continuity of provincial work. Indeed the thing is opposed to all common sense and reason. When the Imperial and Provincial Governments once fairly start together, each with sufficient and sufficiently elastic revenues, it is only right that for all future increase of resources required to meet expanding wants, they should rely, except under circumstances of abnormal pressure, on the development of their own respective sources of income. To do otherwise is both economically and morally wrong. I am aware that the difficulties of the Central exchequer are urged in justification of the conduct aforesaid. Now the embarrassments of the Central treasury can only be either permanent or temporary in their nature. If permanent, let there be a permanent re-adjustment ; if temporary, let there be a temporary contribution, but surely there is no justification for revision or, in other words, asking more and more, at regular intervals. It takes away all elements of permanence and fixity.

"But what adds to the evils of these revisions is the fact that our provincial settlements are short-term settlements. They last only for five years ; and as they fall in, they are revised in favour of the Imperial exchequer and against the provincial administrations. And thus every fifth year our provincial

resources are cut down and our provincial progress thrown back. His Honour the Lieutenant-Governor of Bengal, last year, deprecated it forcibly in this Council. Both Sir David Barbour and Sir Auckland Colvin are in favour of longer terms.

"Further, in cases of abnormal pressure, such as war, the Central Government has the power to demand special contributions from the provinces; but this power is exercised even on ordinary deficits, and on no well-defined basis and it not unfrequently happens that provincial governments, which carefully husband out their resources and exercise economy, have to pay more than those which do not, and economy is thus fined.

"Such is our existing system of provincial finance. Its main features may be thus summarised :—

"(1) The proportion of national revenues allotted to provincial uses is too small and utterly inadequate for local requirements.

"(2) While the revenues of the country are expanding the provincial governments get no fair share of such increase for purposes of local improvements.

"The provincial assignments already so meagre are further liable to curtailments on revisions in favour of the Imperial exchequer every five years. Financially, these settlements have all the evil effects of short-term settlements, taking away all certainty and stability from provincial administrations and seriously interfering with the even progress of provincial improvements.

"The provincial governments are, besides, liable to make special contributions even during the currency of such short-term contracts and that, too, in cases of ordinary emergency—a feature of the present arrangements which imports a further element of uncertainty into provincial finance.

"The whole theory underlying the system is that the revenues of the country, far from belonging to the provinces which raise them or being available for their own requirements, subject of course to the claims of the central administration, to be met by proportionate contributions fixed on some definite principle of population or revenue, constitute a common fund to be absolutely at the disposal of the Central Government, out of which it is to dole out what amounts it pleases for provincial services, and that the provincial governments are only its agents, entrusted with a share of the general work. The financial administration of India has to be taken as a whole, and 'we cannot break up the system into financially separate provinces and make these provinces independent contributories to a central account.' Provincial administration is but a subordinate affair and provincial progress an object of comparatively minor importance. A system of provincial finance conceived in such a spirit and so constructed can never be expected to succeed; and a study of the results of its working during the past twenty-five years will show how it tends to obstruct provincial progress. These results may be thus summarised.

"The Mayo scheme of 1870-71.

"The measure was inaugurated as a measure of economy. The services transferred were selected as being especially liable to expand, *viz.*, Jails, Registration, Police, Education, Medical Services, etc. Expenditure on all these services was 5·1 crores in 1863-64, and during the four following years it continued to rise until in 1868-69 it amounted to over 6 crores. In 1869-70 it was nearly the same, but in 1870-71 (after determined efforts) was brought down to the level of 1863-64, *i.e.*, 5·2 crores. The grants for 1870-71 were taken as the basis on which to fix the Imperial allotment for the services, and the start was made with a reduction in the assignments below the standard expenditure amounting to £331,000. The assignments so fixed over 6 per cent. below the normal level were not to be increased for a number of years. The result was that at the end of five years the charges for the assigned services rose only by twenty lakhs for all India, or at the rate of only four lakhs a year, even including such services as education and medical relief.

"The Strachey scheme of 1877-78.

"A large advance was made in financial decentralisation, additional heads of charge were handed over to provincial management and besides a fixed Imperial allotment in aid of provincial expenditure, certain sources of income, reserved as imperial, were given over for provincial use. The resources, so assigned, however, were five per cent. lower than the provincialized expenditure—a difference which the provincial governments were to make good out of their own resources. The Imperial gain on the new contracts was full forty lakhs, Bombay particularly being most hardly treated. During the Afghan war, the Imperial Government levied from the provinces about sixty-seven lakhs as a special contribution. The contracts were declared to be quinquennial and power was reserved on expiry of the term to revise these agreements and appropriate to Imperial purposes even a portion of the provincial increases of revenues which might have accrued during the currency of the contracts.

"Madras declined to accept the new arrangements and preferred to continue under the old Mayo scheme. As regards the other provinces, the resources so cut down had the necessary effect of throwing back provincial progress. In Bombay during the five years of the contract we could increase our expenditure on our local services at the rate of only three lakhs a year for the whole presidency including Scinde. Assam and Burma were worse off. The Central Provinces, Bengal and the North-Western Provinces fared better. But all round as a necessary result of the revision and the curtailment of provincial resources, a check came to be imposed on the growth of provincial expenditure, and provincial improvement was seriously retarded. The total expenditure on education, for instance, rose from 73·8 lakhs in 1877-78 to 99 lakhs in 1880-81, an increase of only 26 lakhs for all India, including Madras.

"The Ripon Scheme of 1881-82.

"Provincial finance received a fuller development. The revision of the contracts was carried out in a liberal spirit, the old system of fixed Imperial allotment was done away with, and the provincial governments were allowed a share in the general revenues equal in amount to their provincialised expenditure. This very much improved their position in the general scheme and gave them a direct interest in both revenue and expenditure No part of their increases of revenue during the preceding five years was annexed for imperial purposes; on the contrary, the poorer provinces, like Assam and Burma, received additional grants from the Imperial exchequer. The provincial governments had thus a fair start. In three years time they were able to raise their income to an extent so as to be able to convert the initial deficit into a substantial surplus.

"The revision of the contracts, 1887.

"No great change was made in the general conditions of provincial contracts, but a large curtailment of provincial resources was effected on revision so as to secure relief to the Imperial finances. A sum of sixty-five lakhs was resumed for imperial purposes. Bombay fared worst, being deprived of 22 lakhs; the N.-W. Provinces lost 10 lakhs; Bengal the same amount. The provinces had to undergo a period of three years' trial and struggle before they could recover their position

"The revision of the contracts, 1891-92.

"Considerable re-adjustments were made in the assignment of both revenue and expenditure heads of accounts, with the result that as much as 46 lakhs was resumed by the Imperial Government for its own uses out of the provincial increases of revenue; 13 lakhs of this was from Bombay. The provinces had again to make strong efforts to recover their lost position, and at the end of four years were just able to show a total revenue and expenditure equal to what they had in 1891-92.

"It is clear from the above summary that the system requires to be amended as follows:—

"The provincial governments require a larger proportion of general revenues than is at present permitted to them.

"They should further be allowed to share in fair and just proportions in the normal increase of national revenues.

"The revisions of contracts, which exercise a most disturbing effect on the general provincial position, should be either done away with as a normal feature of the provincial system, or at all events, the terms of the contracts should be longer than five years—say ten years, as Sir A. Colvin once recommended.

"The revisions ought not to be followed as a rule without reference to the general financial position of the country by curtailments of provincial resources, the provinces should be allowed to retain their own increases of revenue.

"Special contributions from the provinces ought to cease except under circumstances contemplated in the Ripon resolution of 1881-82, and the whole arrangements ought to be guided by the central idea that the Imperial Government is as much interested in provincial progress as the provincial Governments themselves."

The Hon'ble MR. PLAYFAIR said:—"My Lord, the kaleidoscope of Indian finance has perhaps never changed with more marked rapidity from bright to dark than during the past year. Disappointing and depressing as the position is compared with the prospects that presented themselves a year ago, perhaps it may not be rash to hope that the deficit budgetted for the coming year will be less than the estimate. Some saving may possibly accrue from a better rate of sterling exchange, and the rest given to the land and the fertilizing influence of the restoring sun, if followed by a strong monsoon, may bring in a season of abundance and give back to the finances income that as a measure of precaution the Hon'ble Member does not consider it prudent to rely upon possessing.

"The theme of the Financial Statement is undoubtedly the famine and its consequences. Closely associated with the prevention of famine lies the question of the movement of the people and their distribution for employment. The depression that has so unfortunately come upon the West Indian sugar-industry threatens to close a field for labour that has not been unpopular and unremunerative to some of the people of this country. Recent events on the coast of South Africa have also shown that employment for the natives of India may not be as readily obtainable there as at one time promised.

"It seems all the more necessary therefore to consider what resources lie within the Empire by which the surplus population may find residence and occupation for the good of themselves and for the benefit of their neighbours. In this connection I would invite attention to the advantages that might be gained by the movement of the people to the province of Assam and to the benefit that the Government of India would confer in bringing this about. The Hon'ble Member, in paragraph 52 of the Financial Statement, quoting Major Baring, refers to Assam as 'a poor province with many wants.' This condition unfortunately remains to this day, but I desire to observe that it is the result of neglect and not of innate poverty. In the Budget Statement of 1882, to which the Hon'ble Member refers, I find that Major Baring when discussing the desirability of railway communication, quoted an opinion that the soil of Assam is 'of the richest description, and that with sufficient labour there is no limit to its productiveness.' When it is remembered that Assam proper has an area of nearly 21,000 square miles and a scanty population of about 2¼ millions, importing instead of producing and exporting supplies of food, it may be inferred that immigration is far below the requirements of the province, and that this accounts for the millions of acres still lying fallow.

"There is an enormous tract of land quite distinct from that suitable for tea, which is well adapted to the cultivation of cereals, jute, and other crops. It is remarkably free from drought and should now be pouring supplies of grain into Bengal, like the neighbouring province of Burma. Experience has abundantly shown that Europeans cultivating such soil with hired labour can never compete in economy or compensating results with the husbandry of the raiyat. It must remain with the latter to open out these alluvial lands on his own account, and it will have to be left to the landlord, who is the Government of India, to take

such measures as may be necessary to bring the cultivator in touch with this soil.

The tea-planter's is like the voice of one crying in the wilderness. His exertions to secure labour have been great, and, as he can barely satisfy his individual wants, he grudges the loss of those who leave him to cultivate for themselves. Even if there were an overflow from the tea gardens equal to the number of coolies annually imported for the tea industry, it would take more than a 100 years to provide this district of the province with a population at all commensurate with its requirements.

"Improved communications may ultimately advance emigration, but progress must be very slow unless Government makes it a special business to move a population from the congested districts for settlement in Assam. I should like to observe that any pecuniary outlay involved in this undertaking would be trifling in comparison with the expenditure that has been incurred by Government, with such marked success, to make the waste lands of Northern India productive. This is not all, for this outlay would be reproductive at once without the delay that is inseparable from the construction of large irrigation works, while the value of the crops to the State and to the people is not likely to be less important. Feeling assured that Assam cannot be peopled without special effort, I should like to enquire if the Government of India will not undertake this as a protective measure, as well as for the good of the province.

"My Lord, the information given in the Financial Statement under the heading of Railway Construction is of much interest. When the programme is completed, the protection to life and property against famine and the advancement of commerce should be further secured. I would not wish to appear to advocate that any portion of the approved part of this programme should be abandoned because of the present unfortunate occurrence of famine, but looking to the position of the finances, I should like to ask the Hon'ble Member in charge of finance, whether he does not consider it advisable and possible—without incurring undue loss—to temporarily postpone the immediate completion of some of the projects set forth on pages 20 and 21 of the Financial Statement, and thus give some immediate relief to the financial pressure. I refer particularly to new projects and to those lines that are not of pressing importance, including the hill section of the Assam-Bengal Railway. I would also desire to ask the Hon'ble Member in charge of the Public Works Department if he can now disclose to the Council the various railway schemes, comprising 23 projects, aggregating a length of about 3,700 miles of line, which his predecessor in office stated in Council on the 7th March, 1895, had been submitted to the Secretary of State as lines suitable for execution by private enterprise. It will be of additional interest if the Government of India is able to communicate to the Council the recommendations of the Railway Conference held at Simla last year.

"In paragraph 41 of the Financial Statement it is announced that it is the intention of the Government of India to introduce certain improvements in respect of delivery of deferred telegrams, and I shall be glad if my Hon'ble friend Mr. Trevor can enlighten the Council with regard to this proposal. I trust that he may be able to hold forth the prospect of serving the public with a four-anna telegraphic message.

"My Lord, one of the most interesting subjects of the financial Statement is that connected with the quinquennial statement of Provincial finance. Referring to this a year ago my Hon'ble friend Sir James Westland corrected a misapprehension which he conceived lay in the mind of the non-official community that the Provincial Governments surrendered portions of their revenues for Imperial purposes instead of recognising that the Local Governments receive an assigned portion of the revenues from the Imperial Government for Provincial uses. After studying the Financial Statement, I think it must have become apparent to the minds of most people that it were at least wise in its own interest for a Provincial Government, like Bengal for instance, to spend the full assignment and not lay anything up in a napkin, in case that which is saved be taken away to be given to the province which had spent. It is evident that the community would have gained had the surplus cash balances alluded to in paragraph 73, upon which the Government of Bengal prided itself, been handed over to the

Public Works Department for the improvement of our hospitals or for the construction of additional roads so much needed in many parts of the province, and specially in the Duars District, or for the satisfaction of other important wants. With the increased requirements of a growing province the allotment for Bengal, set forth in Schedule B, page 25 of the Financial Statement, means short commons. The famine is estimated to involve outlay of the Provincial funds to the extent of ₹53⅓ lakhs, the Imperial contribution being limited to ₹70 lakhs. It is estimated that the Provincial cash balance will fall to ₹10 lakhs, which is one-half of the statutory minimum. If the latter has to be restored from Provincial income, it is evident that all works of improvement must be seriously postponed and the energy of the Public Works Department be fettered. I understand it to have been laid down by the Government of India many years ago, that local reserve funds would not be called upon to meet anything greater than scarcity, and that any accumulation of Provincial reserve funds would be free to the Local Government to be employed in works of a productive or a protective character Looking to their requirements, I trust that the Hon'ble Member in charge of finance will take the very earliest opportunity of restoring the contributions now being made to the Imperial by the Provincial Governments, for which action there are precedents to guide him. We shall listen with very great interest to the remarks which His Honour the Lieutenant-Governor may be pleased to make upon this part of the Financial Statement. I shall not be surprised if His Honour expresses disappointment at being called upon to contribute from his resources to what indisputably amounts to severe famine.

"It is pleasing to have the Hon'ble Mr. James' high opinion of the wealth of Calcutta merchants. Good credit is the next best thing to a good cash balance, but I can assure him that merchants are not permitted—at all events at present—to draw upon their bankers as the Hon'ble Member considers, as far as I could follow him, departments should be permitted to overdraw their credits with the Financial Department. The Hon'ble Member perceives signs of those riches in the number of dogs in the Province, and he would levy a tax upon them to meet the cost of the police. There are objections, however in Bengal—of which the Hon'ble Member may not be aware—against the levying of direct taxation, and I fear the tax would not be popular; but as he considers that revenue may be raised from this source, we might hand over the dogs to be taken by the Hon'ble Member for the improvement of the finances of Sindh. The Hon'ble Sir Henry Prinsep has referred—and if I may be permitted to add, has I think very properly referred—to the enormous income derived by the State from the stamp-duties of Bengal which means an indefensible tax upon justice, while Bombay on this account shows a debit. I would go further and direct the attention of the Hon'ble Mr. James to the large income derived by the Government of India from the Bengal railways, which after paying interest amounted last year to something like ₹159 crores, while the railways in Bombay are a tax upon the general finances. This income is a direct tax upon the raiyat and upon the trade of Bengal.

"I have much sympathy with His Honour the Lieutenant-Governor in being asked to accept ₹27 lakhs in place of ₹40 lakhs, the half share of the net earnings of the Eastern Bengal State Railway, considering, too, that with the doubling of the line the profits based on present rates may be largely increased.

"I do not object to the earnings of the railway reverting to the Imperial Government which retains the management of the undertaking. And I do not find myself in agreement with the remarks that have fallen from the Hon'ble Mr. Stevens, for I do not think that the Provincial finances should be dependent upon or be replenished by railway rates. I hope that the undertaking will be administered with Imperial purpose for the benefit of the province and trade.

"I shall conclude my remarks, my Lord, by asking the Hon'ble Member in charge of finance whether, in view of the continued and serious scarcity of money in the presidency-towns, he can disclose his intentions with regard to the date on which he may invite tenders for the rupee loan, and whether, if the rate of discount is likely to be unduly heavy, he may consider it expedient to raise the rate of interest to 3½ per cent. It will also be of interest if the Hon'ble Member can inform the Council whether he hopes to receive the special support of Native States as subscribers to the loan."

The Hon'ble RAO SAHEB BALWANT RAO BHUSKUTE said:—"My Lord, this time last year, the Hon'ble Sir James Westland commenced his Financial Statement, with some observations on the Famine Insurance Grant, and pointed out the way in which the Government of India had disbursed this grant during the previous fifteen years. In the Financial Statement for this year he has brought the figures up to date. During this period about 30 lakhs were spent on direct famine relief, 8 crores and 30 lakhs in construction of protective irrigation and railway works, 3¾ crores were paid for the interest payable to railway companies, and a sum of 5¾ crores was shown as the total of debts paid off or borrowings avoided. The balance was stated to have been absorbed in the aggregate surpluses declared during the same period. The Hon'ble Finance Minister congratulated the Government last year, as it showed, in his opinion, that for purposes of famine insurance it was no longer necessary to make provision for a surplus revenue of one crore and a half per year. The Government of India, thereupon, while restoring the grant to its former position, deemed it expedient to reduce it from one crore and-a-half to one crore per year. The latter amount was deemed sufficient to meet all possible famine contingencies over long periods of time. Never were hopes more sadly disappointed than was the case on this occasion, for within a few months of this sanguine prophecy the terrible scourge of a famine, the worst of its kind since the British rule commenced, afflicted all the Provinces; and at this time nearly three millions of people are employed on Government relief works, representing a direct and indirect expenditure of nearly 3 lakhs of rupees per day for the past few months, with a prospect of its continuance at the same rate for another six months at least. The Budget Statement shows that already the expenditure incurred by the Government of India has come up to two crores, and it is estimated that the charge on this account during the current year will probably be over 3½ crores. This is an object-lesson of the unsteady character of all our financial calculations. The present calamity has not, I venture to say, come unawares. For instance, in the Central Provinces especially, there is a regular famine, the outcome of a succession of bad seasons, in almost all the districts except two or three. It will not therefore be safe for the Government of India to reduce the famine insurance grant from its original figure in the way it was done last year, and I trust that the policy of the Government in this connection will be reconsidered by Your Excellency in Council.

"When the first great famine occurred in the North-West, about thirty-five years ago, Colonel Baird was appointed by the Government to submit a report on the subject, and in that report the causes of the recurrence of such a calamity were traced, and definite proposals were made, one of them being the extension of the permanent settlement to all the other provinces of India. Twenty years later, when the next great famine broke out, a Royal Commission inquired into the subject, and made a voluminous report containing suggestions as to the manner in which the evils resulting from the exclusive dependence on agriculture of 80 per cent. of the population could be counteracted to some extent by the encouragement of other industries, both urban and rural. Twenty years have passed since then, and we have to face a famine far more extensive than any that has occurred before. When good times return it will be very desirable if the Government will take early steps in the directions pointed out by Colonel Baird and the Royal Commission. The experience of the past twenty years sufficiently shows that the construction of railways and irrigation are not sufficient as remedial measures. Rail roads only facilitate the transport of grain. They are powerless to provide against a calamity which is really not so much due to the dearth of supplies and stocks as to the inability of the people to procure work and earn their wages. I would therefore suggest that even in this direction no time will be lost in inaugurating the necessary measure.

"My Lord, I cannot but take this opportunity of drawing the attention of the Council to the restrictions which the Government of India have sought to impose upon the purposes to which the disbursements from the famine insurance grants can legitimately be made. In the correspondence between the Government of India and the Secretary of State which preceded the appeal that was made to the generosity of the British and Indian public, it was sought to be laid down that the Government only undertook to prevent deaths from starvation of

those who were prepared to earn the famine wages by going to the relief-works as labourers, or of those who were physically incapable of earning it. All other forms of distress, including the care of widows and orphans, of old and infirm people, and of men and women not used to work, seem not to be in a position to be reached by the Government help and are now supported from private charity. Similarly those who lost their all, inclusive of lands and houses, were declared to be outside the scope of Government help, and private charity was appealed to to find means for restoring them to their homes, to the possession of their lands, and in enabling them to earn their livelihood by agriculture or manual skill. Perhaps this distinction was emphasised with a view to stimulate private charity to be more liberal than it would otherwise feel disposed to be. Whatever might be the motive, this restriction upon the responsibility undertaken by the Government would result in serious consequences should private charity fail. Except on the assurance that such a munificent private charity would be forthcoming, nobody could ever imagine that the responsibility of the Government was confined only to the bare preservation of life. For life, my Lord, in too many cases is hardly worth living if, when the famine is over, poor people are left to shift for themselves. It is a question, however, whether those that formulated the scheme of assurance against famine ever contemplated this kind of apportionment of the functions of the Government and private charity as embodied in the recent declaration of the Government, and whether to relegate these important functions to private charity is a marked departure which would not have been permitted if the donors of their own accord had raised the money and entrusted its disbursement to the hands of a private benevolent association. But after all the most munificent private charity can hardly be expected to give away more than a million pounds, which is but a drop in the ocean of distress to be relieved over such a wide area as is now visited by the famine. Should it become necessary that, in spite of all available private charity, the Government should proceed beyond the limits laid down in their recent resolution, I feel sure that the efforts of the Government will be directed not only to the avoidance of all possible loss of life by starvation, but that the funds will be so distributed as to enable the poor people, on the expiration of the famine, to start in life again with all the help the Government can give them. The Government of India, I feel sure, will not shirk this responsibility when the time comes.

"Of course I am aware that in our present circumstances, of disminished resorces under many heads and increased expenditure, this beneficial function cannot be performed without contracting a heavy loan so as to make both ends meet. I am glad to find that it is proposed to raise a rupee loan of four crores in India, and the Secretary of State will reduce his drawings by borrowing $3\frac{1}{2}$ millions sterling in England. On this question of loans there appears to be a steady tendency, notwithstanding the protest of high authorities, to increase our sterling obligations to a larger extent than the rupee debt. In 1892-93 our rupee debt amounted 102 crores and our sterling obligations exceeded $106\frac{1}{2}$ million pounds. The corresponding figures in 1896-97 were 107 crores of rupee debt and 116 million pounds of sterling obligation The sterling loans, though nominally bearing as low a rate of interest as $2\frac{1}{2}$ and 3 per cent., really represent, by reason of adverse exchange, a charge equivalent to 6 to 7 crores of rupees, while the charge on the rupee debts has been sensibly reduced by the recent conversions from 4 to $3\frac{1}{2}$ per cent. and $3\frac{1}{2}$ to 3 per cent. The credit of the Government of India now stands so high that it could borrow any amount it wishes at $3\frac{1}{2}$ per cent., and under the circumstances borrowing in England at $2\frac{1}{2}$ or 3 per cent. involves a needless risk. Of course to meet the Home charges there is a certain convenience in the Secretary of State's borrowing sterling loans in England. But this convenience is only temporary, while the risks are far more permanent and burdensome. At least, where money has to be borrowed not for administrative convenience but for the purposes of constructing reproductive public works, it seems to me very inadvisable to persevere in this wasteful policy of borrowing in England. Private companies have been successful in borrowing for railway constructions large amounts of rupee loans at 4 per cent., and there can hardly be any doubt that there will be little difficulty in borrowing the annual sum of three crores and more by way of rupee loans in India.

"If this plan were adopted as a permanent measure of state policy, great benefits would result both to the Government and the investing public. In the past twenty-five years (from 1870-71 to 1894-95) 116 millions have been borrowed in this way, 86 crores for railway construction and 30 for irrigation. Though these works yield a reasonable profit after defraying management charges, these profits are not high enough to satisfy the interest charged, increased by the amount of exchange, which for many years past has been nearly equal to the actual interest itself. The results is that these commercial undertakings of the Government seldom secure any surplus, and each year we have to pay between one and two crores to make up the deficient interest charged; the total sum thus added to the capital amount in twenty-five years being 40 million pounds.

"Another reason why these commercial undertakings of the Government do not result in ensuring any surplus is the heavy charge incurred on account of the permanent establishment in supervising and controlling agency. In respect of State railways, the working expenses exceed 50 per cent. of the gross earnings from year to year. This same disproportion is found also in the irrigation works. The direct receipts from the major irrigation works were about two crores, and the indirect receipts 80 lakhs. The indirect receipts may be left out of account as the Irrigation Department does not collect them. For managing works which have cost 25 crores in construction, and which yield direct receipt of two crores the establishment charge comes to 80 lakhs a year. I have prepared a statement of some of the irrigation works of Bombay and the Punjab, showing the amount spent and the establishment charge on the works constructed :—

BOMBAY.

Name of work.	Expenditure on Extensions, etc.	Expenditure on Direction and Execution.
	Rs.	Rs.
1. Desert Canal	27,000	12,914
2. The Unharva Canal	12,000	12,000
3. The Begari Canal	65,000	24,000
4. Eastern Nira Canal	68,000	11,000
5. Hatmati Canal	5,800	1,000
6. Lower Panjra Canal	2,700	3,000
7. Ekrook Canal	4,500	2,700
8. Pravara Canal	2,800	300
9. Mootha Canal	31,000	31,000
10 Ekrook Tank	6,000	5,000
11 Krishna Canal	7,000	3,400
12 Nira Canal	24,000	20,000
13 Bhasvad Tank	9,000	6,000

THE PUNJAB.

1 Swat River Canal	37,000	26,000
2. Western Jumna Canal (Including Sirsa Branch)	3,28,000	3,79,000
Ditto ditto	34,000	27,000
	3,62,000	4,06,000
3. Bari Doab Canal	2,84,000	3,09,000
4. Sirhind Canal	3,98,220	4,13,880
5. Chenab Canal	2,39,500	2,38,500
6. Lower Sohag and Para Canal	39,800	2,400
7. Sidhnai Canal	56,940	34,960

"These figures, if correct, are simply astounding. For every one hundred rupees spent the charge is in some cases cent. per cent, while in most it exceeds 50 per cent. It is no wonder that, with such a heavy drain for establishment charges, these so-called reproductive works have failed to accomplish the object of those who first started the idea of constructing these works from loans. Their plan was that in course of years these works would yield a surplus, out of which to construct new works without their being a charge on the general revenue. If this state of things has not been realised, the failure has been due to

the two causes I have stated above. I hope that this matter will not fail to engage the attention of Your Excellency's Government.

"Last year I dwelt on the increased expenditure of this country. Last year I also mentioned a readjustment of expenditure was much needed. I know that more grants to education, effective recruitment of the police-force and other reforms mean further expenditure. To defray it resort must be had to taxation. But all that is wished for as the greatest desideratum is the redistribution of expenditure. It is no use dwelling this year on taxation and many other sundry points. Your Excellency was kind enough to assure us last year that agriculture had the first claim on Your Excellency's attention. And I trust in course of a more favourable time some solid good will come out of Your Excellency's Government.

"Turning now to the details of this year's Budget, it may well be described as a Famine Budget, so dominant is the factor of famine in diminishing the resources under most heads, and in increasing the expenditure under many. The improvement in Exchange and Exchange Compensation, and to some extent, in Irrigation, though considerable in itself, is rendered nugatory by the falling-off in Land, Opium, Excise, Customs, Forest and Income-tax, and to some extent in Stamps and Provincial rates. The charges of administration under Police, Jail, and to some extent, the Army charges, have been increased by the payment of compensation to low-paid subordinates. The estimate of Famine charges at 3½ crores would appear to be too low and would have to be increased. It is rather more than doubtful if it is expedient that at such a time as this the Government of India should launch into an extensive scheme of State Railway and Company Railway works which would impose upon it the obligation of finding 6 to 7 crores of rupees out of direct revenue for the next three years. These railway undertakings, involving the responsibility of providing 28 crores in three years, have forced the Government to borrow heavily this year and will impose a further necessity of borrowing for the next two years also. The country cannot be expected to rally from such a famine in the course of a year, even if the rains this year are propitious. The experience of the last famine justifies the apprehension that distress will not be over for a year or two. Such being the necessary results of embarking on the extensive railway constructions proposed, I would suggest that some other class of relief-works, answering the purpose and yet not involving such a heavy expenditure, may be determined upon. When the first duty of the Government is to preserve the lives of many millions of people at any cost, all schemes of improvement should be put off till the times are more favourable.

"There is only one other subject which calls for notice. It appears from the Budget Statement that the Provincial Contract arrangements have been entered into with the Local Governments, notwithstanding the strong expression of their desire to put them off till the famine was over. It is not easy to follow the Hon'ble Finance Minister's remarks in this connection, but, as far as I have been able to understand them, the contracts have been settled in part and left open to further modification in regard to many important heads. It is a very inconvenient arrangement, and it would have been far better if, in compliance with the wishes of the Local Governments, the old contracts has been allowed to remain in force at least for another year.

"To sum up the chief points of criticism I have ventured to offer, I would state —

(I) That the Famine Insurance Grant should be raised to 1½ crore.

(II) That after the famine is over the Government should institute an inquiry to determine how far effect has been given to the two previous Commissions; and to suggest means for preventing, as far as possible, the helplessness of people in time of famine.

(III) That the restrictions placed upon the responsibility of the Government should be reconsidered.

(IV) That as far as possible, further borrowings should be restricted to rupee loans, in place of sterling obligations.

(V) That the enormous proportion of permanent establishment charges, in State public works, should be reduced.

(VI) That, as the famine is the principal factor in this year's Budget, it is desirable in every way for the Government not to embark on any large scheme of railway expansion directed towards mere improvement."

The Hon'ble the MAHARAJA OF DARBHANGA said:—"My Lord, the Financial Statement which has now been laid before us has been looked forward to with somewhat mixed feelings. All of us were aware of the fact that the Government had incurred a large expenditure to cope with the famine which has rightly been described by competent authorities as the greatest famine of the century. The public anxiety was great as to how under such circumstances the Finance Minister would balance his Budget. And I must congratulate the Hon'ble Member in charge of the Finance Department upon having presented such a Budget in a year like this of general financial depression. The Government will have spent little less than six millions sterling (taking the sovereign at Rs. 10) upon famine expenditure during 1896-97 and 1897-98. During the great famine of 1876-77 it spent more, and the difference is, no doubt, due to the construction of railways and other protective works which have since been carried out. I do no more than the fairest justice to the Government when I say that there is a general feeling of gratitude throughout the country for the efforts which are being made by the Government to mitigate the horrors of famine. The policy of the Government in this respect is worthy of a great and a civilized administration. It is not, however, to be expected, having regard to the magnitude of the famine relief operations, that there should not be occasional cases of death by starvation, and unfortunately there have been reports of such cases in jungle tracts in regard to which, however, I hope the accounts have been greatly exaggerated. However that may be, in a year of severe scarcity with a large expenditure to be incurred on famine, a hopeful Budget is altogether out of the question. The Budget Estimates for 1897-98 show a deficit of more than two millions and-a-half, but a popular feeling will be one of thankfulness to the Government inasmuch as no new taxes have been imposed to meet the deficit. I believe the utmost limit of taxation has been reached, and new impositions will produce little or nothing as compared to the great dissatisfaction which they are sure to evoke. It is not for me to repeat the words of Lord Mayo when he said that new taxation in India involved a political danger, the magnitude of which it was difficult to exaggerate But the unsuitability of this country for purposes of direct taxation cannot be gainsaid. For instance, although the income tax has been in force for a number of years, the inquisitorial methods which are in some cases adopted by ill paid and corrupt assessors in the mofussil render it a highly unpopular imposition. I myself know of a case where a clerk employed in an income-tax office drawing not more than Rs. 30 a month, has in a bank a big balance of some thousands which very discreetly is entered in the name of his wife.

"Our financial prospect, being what it is, and the imposition of further taxes being impossible, I think we may appeal, with some confidence, for a subsidy from the Home Government. I make this appeal not only as a matter of favour but also as an act of justice. The highest authorities have told us—Your Lordship is one of them, for your Lordship's Government only recently protested against India being charged with the ordinary expenses of the contingent despatched to Suakim—the highest authorities, statesmen of the eminence of Lord Northbrook and others, have told us that India has often been saddled in the past with the expenses of expeditions outside the limits of Her Majesty's dominions in India, in which she was but little or in no wise interested, and which ought to have been borne by the English Exchequer. Let me quote an extract from the evidence of Lord Northbrook before the Royal Commission:—

"I should like to sum up what I have said on this point. I think that India had a fair claim to exemption from the ordinary charges of the Abyssinian war. The ordinary pay for maintaining the garrison at Suakim after the 10th May, 1885, should, I think, be refunded, and in my opinion on equitable grounds £350,000 should be given to India in respect of the Egyptian Expedition of 1882. I do not see any reason why it should be considered that because India was inequitably and illegally treated during many years, that treatment should not be redressed by some action at the present time."

"But this is not all. Many many years ago, when the Sultan of Turkey visited England he was entertained at the expense of India The circumstance may be regarded as a matter of ancient history, and the claim may be considered, in legal phraseology, to be barred by the law of limitation. But equity overrides legal technicalities, and I am convinced that a great and noble nation like the English people will take the broader and more equitable view of the matter; and it is a matter of some regret to find that the precedent created in the case of the Sultan was repeated in connection with the Afghan Prince, Sirdar Nasirulla. A part, at least, of the expenses of his entertainment ought to have been paid from the English Exchequer, as he was, after all, the guest of the English and not of the Indian Government. I beg leave here, my Lord, to quote a conversation between Lord Welby, the Chairman of the Royal Commission, and Sir Henry Brackenbury in this connection :—

"The Chairman: 'And you hold that the Indian Government should only pay for keeping order in India?'—I think she pays for an Army of seventy or eighty thousand men more than she wants, simply to keep order in India. The Army in India is at least 50 per cent. larger than it need be, were it not for matters beyond her frontier. I would let her pay for that Army."

"'Then your postion is that India should pay for a sufficient Army to repel invasion on her frontier, and that towards this Army England should make a contribution which, according to the War Office figures, represents something like £1,100,000 per annum?'—I do."

"'And that should be the contribution of England for what you call Imperial policy?'—Yes. *Per contra*, I think that it would be perfectly fair that India should pay a good contribution to what the Navy costs."

"'You do not think that since she is interested in keeping her own territory from attack, she ought to pay the whole of the cost?'—I think she ought to pay a great portion of it, but certainly not the whole because she is not the only one interested in keeping another great Power away."

"Thus in the opinion of so distinguished an officer as Sir Henry Brackenbury, a part at least of our Military expenditure should be borne by the English Exchequer. And this is an additional argument in favour of our asking for a subsidy. So long the burden has been exclusively borne by the Indian taxpayer. In the time of his need he may, therefore, fairly appeal to the Home Government for a subsidy, and I am sure he will not appeal in vain to the generous English nation; for his demand is based upon considerations of justice and equity. For England in the past he has made at least some pecuniary sacrifices, and to the English Government he may appeal for help in a time of pestilence and famine. I trust Your Lordship's Government will see their way to press this view of the matter upon the attention of Her Majesty's Ministers in England. The whole of India feels deeply grateful for the magnificent way in which the people of England have unanimously come forward to afford relief to the famine stricken peasantry of this country in a year like this. What I now request is that the English Government should supplement the good work that has been performed by the generous English public. Any concession of this sort, in a year like this will, I feel sure, not only be regarded with feelings of the deepest gratitude by the thinking portion of the Indian public, but what is more it must go a long way to bind down the two nations in closer bonds of union and love.

Before I conclude I wish to say a few words about the remarks that have fallen from Mr. James as regards Bengal and the Permanent Settlement. The Hon'ble Member has, I believe, recommended levying of nazaranas from the zemindars, and has cited the precedent of Subadars of the time of the Mogal Governor. This precedent, to say the least, is most unfortunate. I would ask whether the hon'ble gentleman has studied sufficiently of Indian History to know that these Subadars were vested with most arbitrary powers which were used most oppressively. Does the hon ble gentleman wish the return of those days? Then, too, I beg leave to clear the Hon'ble Member of the misapprehension he is labouring under that the zemindars and raiyats do not pay any local taxes over and above the Government revenue. I would only advise him to study the Bengal revenue laws If he does so, he will find that the zemindars do pay special taxes in the shape of Road Cess, the Provincial Public Work Cess, the Irrigation Cess, and other local taxes. The proceeds of at least one of these

taxes, *i.e.*, the Road Cess is most usefully spent in the construction of district and village roads. The Hon'ble Member, I believe, expects the Bengal zemindar and raiyat to be taxed for the construction of roads in the province of Sindh. My Lord, I strongly deprecate these unjustifiable remarks on the Permanent Settlement. The opponents to this Settlement do not seem to remember the fact that at the time of the Permanent Settlement the Government allowed the landlords only ten per cent. of the gross revenue, and that the Government share was ninety. A number of old families were ruined and their estates sold up for arrears of the Government revenue within 20 years of the Permanent Settlement. And it is most unjust to grudge the zemindars the fruit of their thrift that they are now enjoying. I may just here mention that the zemindars and the raiyats of Bengal have strong legal objection to the collection of any new taxes on land. They may be mistaken. But if they err, they err in good company. Such eminent Indian statesmen as Sir Erskine Perry, Mr. Ross Mangle, Mr. Thoby Princep, Sir Frederick Halliday agree with their views.

My friend the Hon'ble Mr. Playfair has made certain remarks as regards Assam. I wish simply to state, my Lord, that I agree with every word that has fallen from his lips. Assam, if it had been so thickly populated and cultivated as it ought to be, would have been pouring tons and tons of food grain into the famine-stricken districts as Burma is doing. I look upon the work of bringing the jungle land of Assam under cultivation as a sort of protective work against the famine. I know various plans have been adopted but with little success. And I would, therefore, suggest the experiment of selling tracts of lands to syndicates and large capitalists. I feel sure that syndicates and capitalists will gladly come forward if the lands are reclaimable, provided that they have to pay a fair price for the land."

The Hon'ble MR. REES said:—"My Lord, it is gratifying to a member from Madras to find his presidency described by the Hon'ble Finance Minister, as the Premier Presidency. It is, at any rate one of the Provincial sheep, to use His Honour the Lieutenant-Governor's metaphor, which has gathered the most wool in the expiring quinquennium, though I see it just now described as notoriously the most backward part of the Empire, an opinion the Calcutta *Statesman* holds of the territories under the Government of Fort St. George, shared, I think, by no statesman in Calcutta. The Madras Presidency will accept the courteous apology of the Hon'ble Finance Minister. It had, I am sure, no intention of visiting upon his head the fact that it is geographically an extra day distant by post. It is only naturally anxious to have the earliest possible information concerning matters in which its extensive commerce, and other great interests are so nearly concerned. When the Hon'ble Finance Minister said that Madras would naturally object to providing meals for the Punjab, or the Punjab to providing water-works for Madras, it did occur to me that the Madras sheep would long provide meat for the Punjab before all the five rivers of the Punjab would afford one drop of water to the thirstly in Madras.

"Nor would I omit to say, with what satisfaction Southern India will learn that the grant for Bangalore water-supply which lapsed has been repeated, and how relieved the people of the Northern Circars and northern coast of Coromandel will be to hear that the famine will occasion no diminution in the contemplated grants for the East Coast Railway connection between Madras and Calcutta, which progresses rapidly towards completion. I do not think any one who had lately visited the most stricken portions of the North-Western Provinces and the Central Provinces could doubt that to persevere with railway extensions undeterred by the financial exigencies of the present famine, is the only way in which to mitigate its rigour in future years. But for the assistance given to the Great Indian Peninsula Railway by the Indian Midland and Bengal-Nagpur protective lines, great loss of life in these regions would have been absolutely inevitable. The present generation inhabiting the remote and scattered villages of that Province have not known famine, and without improved communications it would have been impossible to provide them with relief. But for the extension of the Southern Mahratta system the local but severe scarcity in Madras could not have been so effectively treated, or deaths from starvation avoided in the districts of the Bombay Dekkhan, which in past famines have been almost depopulated. But that extensive sections

of the East Coast connection are already complete, regions so susceptible of famine as Ganjam and Orissa would have been added to the affected area. Time will show that to persevere in a forward railway policy, even in a year like this, is as wise as it is courageous. Indeed, it is a year like this which illustrates most completely its wisdom.

"And this fact suggests a passing reference to the Famine grant. Now though it is clear that in order not to budget for a deficit, or not to unduly increase a deficit, the exigencies of State book-keeping have made it necessary to exhibit in the accounts a suspended or a reduced Famine grant in some out of the last fifteen years, I cannot understand what cause Hon'ble Members have to exclaim against the system which gives them occasion to criticize. For in fact, although in those years the Financial Statement showed a deficit, and therefore prevented Government from exhibiting 1½ crores as expended under the Famine grant, yet that amount and more was in those and other years spent on protective railways, and not charged to Revenue; and if the accounts of the last sixteen years be taken, more far more, than 24 crores have been spent on the objects for which the Famine grant is intended. Unless Hon'ble Members can seriously contend that it is desirable that there should be, as in the good old times, prosperity and plenty in some districts and absolute death and depopulation in others, they must allow that the railways, which have levelled prices and equalized supplies, have proved the best possible protection against famine; and, while they may exclaim against the sheet exhibited by State book-keeping, they cannot possibly find fault with the facts behind the figures.

"If the Government had gone on charging protective expenditure to the Famine grant regardless of the deficit, it is not clear how any complaints could have arisen. But my hon'ble friend Mr. Ananda Charlu will have something to say on this subject no doubt, and will prefer the dissection of past promises to the acknowledgment of present performance. Hon'ble Members will remember last year how the Hon'ble Finance Minister offered Mr. Ananda Charlu the ready refutation of a blue book, and how firmly but courteously he declined to touch the unclean thing and be enlightened. I do not know if he has yet read it, but in fact my hon'ble friend has been endowed by nature with so kindly and genial a disposition that with the best, or, should I say, with momentarily the worst, intentions in the world, he cannot really think ill of any one, not even of the Government. It is natural that something of a forensic flavour should cling to the utterances of distinguished advocates in Council.

"Nor do Hon'ble Members fairly represent the feelings of the natives of the country in deprecating the speedy extension of railways. There is no presumption in saying this. Such English officers as can and do associate and converse with all classes of Indians—and fortunately it is a large class—can ascertain public opinion far better than can members of the highest class of Hindus. Owing to the water-tight compartment system of caste which divides them from large numbers of their fellow countrymen, they experience great difficulty in ascertaining, and in expressing, the views of the people. For instance, it is as notorious as it is unfortunate that the masses of the people do not yearn to be educated. Yet those who speak in their name represent them as deeply resenting any diminution of the grants for higher education, in which of course they in no way participate. But they do yearn for railways and appreciate the additions they afford to their material prosperity. They give one practical proof of this by travelling. Even in this famine year, you can see the trains in the most affected tracts crowded with third class passengers. Alike in British India and in Native States, railway extension is a matter in which the people take the keenest interest, as anyone who is at the pains to ascertain their feelings can testify. Many a distinguished Indian lawyer has sat in this Council, who has passed his whole life in a great city, and is really far more of a stranger in rural India than Civil Servants, who have an affection for the people and have learnt their languages in order to find out their real views and wishes—I will not add aspirations, for the masses have none, but desire only increased material prosperity.

"It must fairly astonish all who have studied the history of past famines to hear the manner in which one Hon'ble Member opposite has referred to this

subject. The Hindus wrote no history, from a prophetic fear perhaps lest they should by so doing conduce to the confusion of the latter-day politicians, but the Muhammadans in power encouraged historians, and in the pages of Ferishta and other writers we read of the appalling character of famines in past times,—how the people were driven in order to satisfy their hunger to expedients wholly foreign to their humane and civilised character; how they drowned themselves in the Jumna in crowds, unable to endure their misery; and how in the beginning of last century the price of grain sometimes rose to sixty-four times the ordinary rate. That meant, very much less than that meant, absolute depopulation; but now it is no uncommon thing for a normal death-rate to be registered in a famine district, though famine and disease go hand in hand. In fact, now for the first time in history is so widespread a famine being met with anything approaching adequate preparation.

"Other Hon'ble Members opposite struck a note which rings in rural India. In the south of the Allahabad district the people crowded around the Collector, Mr. Fuller, crying: 'We owe our lives to the Sirkar.' It is amazing to hear it suggested that famine is the result of over-assessment, and that the people fared better in the good old days. These are very elusive of location, but assuming they must be post-legendary as they must necessarily be anti-British probably the age of Akbar would be selected.

"It was the Emperor Akbar, the most just and popular of all the rulers of the good old times, who said: 'Enough shall be left to a raiyat for the keep of himself and his family till next season, and seed for sowing; the rest is the land-tax.' It is an article of faith that Akbar acted in good faith, and there is no room for the may and shall controversy in regard to his drafting. He took about twice the land-revenue the Government does from about half the area, and it is recorded that in the reign of his successor the dead and dying in famine times obstructed the highways. My hon'ble friend will say the agriculturists are poorer now and more highly taxed than they were in the good old times; at least he said so very plainly in an address he recently delivered in this city; but how is it possible to institute any comparison between such a principle, or want of principle, and a system under which poor tracts, like parts of the Central Provinces, pay as assessment for division between Government and the landlord something under 5 per cent. of the gross produce, under which dry lands rarely pay more than 10 per cent., and under which 20 per cent. is only exacted under wholly exceptional conditions in regard to irrigated lands of great value, while the incidence of land-revenue over the whole of India is about 7 per cent. of the value of the produce? If land is so over-assessed, how does it happen that the rental of irrigated land is three times, and of unirrigated land twice, that of the Government tax? That is nevertheless the case in Southern India, and I have no doubt in other parts of the Empire. Moreover, while the Hon'ble Mr. Sayani says the people are reduced to the last extremity, the Hon'ble Mr. Bhuskute, who holds the same faith, rightly points out that the Government of India can borrow as much money as it wants at 3½ per cent. More than this, the Hon'ble Finance Minister will be greatly disappointed if he does not get it at 3 per cent.

"It would be easy to multiply proofs that these positions are baseless or that any foundation of fact has been crushed beneath a superstructure of exaggeration."

The Hon'ble MR. CADELL said:—"My Lord, there is one aspect of the Financial Statement which is, I think, specially worthy of attention, and that is that, notwithstanding the large expenditure on famine relief, the serious deficiency in railway earnings, and the loss under various heads of revenue, there would have been no deficit at all, had it not been for the consideration shown to the landed classes in the suspension of land revenue due to the State, and in the increased advances made for land improvement and other agricultural purposes. These two items make together a difference of Rs. 3,462,900, which is nearly 75 per cent. in excess of the deficit.

"If I may judge of other provinces from my own, it seems to be likely that if the advances had been left at the normal amount, it would have been pos-

sible, although by no means expedient, to have collected enough of the suspended land revenue to make good, with the assumed saving in advances, the total deficiency in the accounts. The existence, therefore, of this deficit would seem to be due to the determination of Government to submit to any inconvenience, and to incur any expenditure which might be necessary in order to lessen the burden which the famine had thrown upon the landed classes, and in order to help the agricultural population to contend with the difficulties by which they were surrounded.

"And I think that no one who considers the question carefully in all its aspects, and, above all, no one who has watched the slow recovery, in favourable seasons, of villages the population of which has been dispersed in a time of distress, compared with the quick return to moderate prosperity of villages the people of which have managed to hold together, is likely to doubt that the policy adopted by Government is in every respect the right one, and that it is prudent and business like as well as statesman-like and humane. And nothing will in my opinion more surely tend to render possible the speedy return of prosperity for which the Hon'ble Member hopes than the very liberal policy, in this respect, which has been adopted by Government.

"And now, my Lord, I pass to the consideration of the Statement as it affects the part of India with which I am more immediately connected, and I am glad to think that my remarks will breathe a greater spirit of contentment than those of some Hon'ble Members who have preceded me. Indeed, I have chiefly to express my gratitude for benefits received, for if the inhabitants of the North-Western Provinces have been unfortunate in being exposed to more widespread distress than their neighbours, they have at least good cause to congratulate themselves on the treatment which they have received.

"With respect to direct famine relief they have reason to be grateful, not only for the very large expenditure in the provinces, but for the principle on which provincial requirements have been met. This is sufficiently indicated in para 144 of the Statement, in which it is stated that the Government of India 'are unwilling to take any step which would have even the appearance of putting any check on expenditure on famine relief, other than the recognized checks prescribed in the Famine Codes.' No one could reasonably ask for more than this, and if the large expenditure on famine relief in the North-Western Provinces is a proof of the severity of the distress there, it is also a measure of the liberality with which these Provinces have been treated by the Supreme Government. And I know that Sir Antony MacDonnell acknowledges in the warmest terms 'the complete and generous support which he has received in his strenuous and successful contest with famine.'

"We have also been specially favoured in the liberal application to our case of principles laid down by the Famine Commission with respect to the suspension of land revenue and the grant of loans. In both these respects the North-Western Provinces have received the fullest consideration, for to them have been allotted nearly half of the total amount of suspensions, and two-fifths of the sum sanctioned for land improvement and agricultural advances, throughout India.

"In one of the earliest paragraphs of his Statement the Hon'ble Member has referred to the preparations which during many years have been made for the calamity which has overtaken us, and from these preparations, too, the North-Western Provinces and Oudh have derived very marked benefit.

"The canal system of the Provinces has been extended and perfected, so that now with the exception of the Sarda Canal, the probable benefits from which have been doubted by those who are most interested in the country which it would water, and with the exception of the Ken Canal project which has been discredited by the ill-success of the Betwa Canal, there is no large irrigation work which is at present known to be practicable, and which has not been completed or begun.

"While upon this subject I may mention that I think that there must be some misunderstanding underlying the Hon'ble Mr. Bhuskute's remarks regarding the high cost of management of canals. Some canals are so unremunerative that their returns might give almost any percentage, but ordinarily there is no department of the State which is better managed, or in which greater attention is paid

to economy, or in which Government is better served by its officers. And with respect to railways the progress which has been made since the last period of scarcity has been most important. Up to the close of 1877-78 the North-Western Provinces had not, relatively at least, been neglected; there was continuous railway communication from the border of Bengal to the north of the Doab, and the Oudh and Rohilkhand Railway served at least part of the country to the north of the Ganges. But this line had penetrated no further than Moradabad and Bareilly, and the majority of the sub-Himalayan districts were not accessible by railway. And the return which I have before me shows that, while much had been done, there was a very distinct lull in construction, for while there were 1,327 miles of open railway, there were only 20 miles under construction. Eighteen years later the open mileage had been more than doubled, and at the close of last financial year there were 2,835 miles of railway open, and the 573 miles which were under construction, chiefly in Eastern Oudh and in the Gorakhpur division, have proved of very signal service during the present emergency, and the money spent on them has been an additional advantage to the North-West Provinces.

"The large additions which have been made to our railway systems have filled up many blank spaces on the map, but the most important feature of the extensions has been that the sub-Himalayan districts are now traversed by railways from the Ganges to the eastern boundary, and that to the south the Bundlekhand districts are now served by the two eastern branches of the Indian Midland Railway which meet at Jhansi, and by the continuation which passes on to the south. It was admitted in 1895 that the Lucknow-Sitapur-Pilibhit Railway had, by pouring in grain from the Punjab, saved some of the districts served by it from distress, and if during the present calamity we have heard so little of difficulty in the supply of grain to impoverished districts, this must be attributed in a large measure to the facility of supply which we owe to the railways, and to the feeling of confidence which this facility inspires. When the history of the present famine comes to be written it will I think, be admitted that part of the battle against famine was fought and won during the years of wise preparation which preceded the calamity.

"And, with reference to the objections which have been made to the policy of Government in pressing on the construction of railways in spite of famine, I must say that our experience is strongly in favour of a spirited railway policy, even in a time of temporary difficulty.

"Apart from the treatment of them with respect to famine, the North-Western Provinces have an additional ground for thankfulness in the better terms given to them in the new quinquennial settlement. The question of the justice of the old arrangement has been under discussion for some time, and the North-Western Provinces Government has demonstrated more than once the insufficiency of the old assignment. I am glad to see that it is now admitted that the Provinces were harshly treated in 1892, there are many very necessary reforms which have been delayed by the settlement of that year, and, differing from other Provinces, we have reason to be glad that the settlement in question has not lasted longer, and that now at length we are done with it.

"I have already stated the opinion that the liberality which has been shown in dealing with agricultural distress is likely to prove the best preparation for a quick return of prosperity as soon as we shall have moderately good seasons, and it may, I think, be hoped that whatever the expenditure of the year about to begin may be, the estimate of the revenue may prove to be somewhat gloomy and pessimistic. If the stars in their courses continue to fight against the Hon'ble Member, the estimated losses may no doubt be realized, but the consideration shown to the people has left large balances of arrears due to Government, and much these should be realizable, and some of them, if the rains be at all favourable, of should go to swell the receipts of 1897-98, although that year is already affected by the restricted *rabi* area, and the injured crops of the present season.

"And whatever may be before us next year, there seems to be every likelihood that in the near future at all events we shall have a return of financial prosperity, hastened and augmented, owing to the wise and generous liberality which marks so distinctly the Financial Statement now before the Council and the famine policy of Government."

The Hon'ble SIR GRIFFITH EVANS said:—"My Lord, there are many things which my hon'ble friend Mr. Sayani has said with which I agree, but there are some things with which I must utterly disagree, and one of them is that he has informed us of a golden age in which the raiyats were all happy and contented, and he has—if I understood him aright—also informed us that at present the raiyat is in a sour, miserable and embittered state, that he is poorer than he ever was before and, also, if I understood him rightly, that this condition of the raiyat is occasioned by the fact that he is governed by an alien race, and that the money of the country goes to England in order to pay for the army and civil service. My hon'ble friend Mr. Rees has pointed out that there is no history in which we find this golden age; certainly it does not appear to have been in the Muhammadan era, and it may be that it is only that mythical golden age which all nations have traditions of. But, if it is seriously intended to say that the position of the people has got worse since the English have been here, it is a very extraordinary thing to say in the face of history. We know what the history of this country was when the British assumed the dominion of it. We know that, instead of being a golden age, these grumblers would find, if we could restore them to it, that it was a period of anarchy and bloodshed, with utter insecurity of life and property, no liberty and no justice. There is no way by which we can restore them to this paradise, if they wish to go back to it, except by leaving this country and leaving them to govern themselves. The native army would, no doubt in the end, supply them with a military despotism such as frequently existed in this country before the advent of the English Whether they would like it or not I doubt—in fact, I do not doubt it at all. But there is probably, as there is in all such representations, some distorted fragment of truth, and so far as I can understand it is this, that in consequence of the anarchy and bloodshed and war and famine and the neglected state of the country, it was comparatively sparsely populated Taking Bengal—at the time of the Permanent Settlement about two-thirds of it were jungle which has been reclaimed since that time. Then in the more northern regions it is certain that owing to bad government, oppression and one thing and another, there was a much sparser population than there is now, that instead of the raiyats competing for land the landlords were competing for tenants and from fortified villages revenue could only be collected by an army. That probably is the real explanation of it. That reminds me of what happened in the part of the Ganges Delta when a storm-wave broke over the place and destroyed most of its inhabitants. There were a certain number, however, left, and among them was one of my servants who had a house there, and he applied to me for an advance to rebuild it. I condoled with him because six of his relations and four children and most of his neighbours had perished, and he said there were compensating circumstances for those who remained behind, because few people would care to come there as it was such an insecure position. Land would be plentiful and rents low.

"These 'praisers of the past' are mostly well-to-do men whose prosperity is the outcome of this alien Government. They have a security of property and a liberty which they never had before, but they take hold of the poor raiyat and say this poor raiyat is in a comparatively worse state, not because the raiyats have increased owing to peace, order and protection not because the increase of the population in the congested districts presses upon the resources of the soil, but they say it is the drain of a foreign Government. I think this is the first time I have heard this doctrine propounded here in Council, and I must protest against it, because I do not believe that any one of the men who propounds this doctrine would do anything save hold up his hands in horror if he thought that the English were really going away and the country was going back to the condition it was in when they came. That there is much poverty, we all know, that there is discontent because we have allowed the money-lender to use our legal machinery to divorce to peasantry from the land I believe—also that

many of our well-meant efforts to benefit the raiyat have been failures,—but that is another story.

"Now, leaving this matter, I turn to the Budget. I agree entirely with what has been said by the Hon'ble Mr. James, that it ought to be a source of congratulation to us that, in the face of the plague and the famine, the deficit is so small. We find from the Revised Estimates of 1896-97 that from the direct payments for famine and the shrinkage of the revenue the total loss comes to over 6 crores, and the estimated deficit is only about 2 crores. No doubt part of this difference is made up by about 1½ crores gained by rising exchange—a fortunate thing, but not a thing we can depend upon. There are also various economies.

When we come to the estimates of 1897-98, we find the same position of things appears. It is a year of plague and famine and no man can tell how much famine there will be and how much plague. The Hon'ble Financial Member has pointed out that the estimates of the future loss by famine must be entirely uncertain, and that we can only make such an estimate upon the materials we have. If there is a good monsoon and if the exchange keeps up at the rate it is now, or goes still higher, it is perfectly possible that there may be no deficit at all. It may be that the increased revenue under the various heads together with the rise in the exchange may obliterate the deficit altogether. But, on the other hand, in case things go against us, and if plague should increase, and if there should be another scanty rainfall, then no doubt there would arise a situation so bad that no Financial Member of Council could very well dare to contemplate it. But with regard to that we must hope for the best. We have no reason to believe that there will be another bad season, and even if there were we have no doubt a large power of borrowing in reserve, and there is no doubt that the money which has been invested out of the famine surplus in protective railways and in the reduction debit give us a very large reserve to fall back upon in order to borrow, supposing things should become worse. As regards these protective railways I wish to remark that many are not only protective but also productive, and we see from this Budget that sometimes they are moved into one category and sometimes into another. The meaning of that is that, although they act as protective, they are also productive. That, therefore, is practically an investment of the famine surplus in the reduction of the debt which we otherwise should have incurred in making these very same railways, which we have made out of the Famine surplus. Therefore, as I understand it, there is not only available for borrowing purposes five crores which are put down in this Budget as having been spent in the reduction or avoidance of debt, but there is also a very large amount which we could fairly borrow against as having been spent upon productive railways. Practically all we should have to do would be to charge them back to the capital account they would have gone into if they had not been made out of the surplus revenue. This of course strengthens the hands of Government.

"As regards any demands on the treasury—it is impossible to make any this year. There is no doubt that the treasury must be treated as empty, and nothing can be done except to meet the current expenses of the administration, and wait and, to use a nautical phrase, to lie close-reefed until the storm is over.

"That the Government of India takes a hopeful view of the situation is shown by the fact that Government is going on with a large expenditure on capital account and making railways out of borrowed money to the extent of about 10 crores of rupees, borrowing partly in England and partly in India; the English borrowing being 3½ millions sterling, which is equivalent to about 5½ crores of rupees, and the borrowing here being about 4 crores. If the Hon'ble Financial Member is able to get that 4 crores at 3 per cent, he will apparently be fortunate looking at the present state of the market. But he knows best, and

I suppose he sees his way to doing it. Now this policy of continuing the expenditure on capital account is no doubt a bold policy; timid people would undoubtedly under these circumstances reduce it as much as they could. It would not be possible, I take it, for anybody to reduce it altogether, because some of the expenditure is practically incurred already, and a great deal of it could not be stopped without an enormous amount of waste and loss. But it may be that there is a certain amount which could be postponed, supposing that it were really considered desirable to do so. But having regard to the fact that if this famine goes over without causing more expense than appears on these estimates, or even if it does cause some more, yet if it does not cause very much more, it is tolerably certain from this Budget that, with the large amount of revenue that is coming in, as soon as the trouble is over, next year we shall see a very large surplus. It is apparent from the figures that that would be the case supposing all these losses which arise from the famine come to an end, and it is pointed out by another Hon'ble Member that we should under these circumstances get back a very large quantity of the suspensions of land-revenue that have been made under the present circumstances. Therefore, unless one takes the gloomy view that we are the object of the wrath of the gods and that we are likely to have also a third bad season, there is no very serious cause for alarm, although there is no doubt cause for economy for the time being in our revenue administration. As regards the question of whether it is a wise policy or not, it must be left for the future to say. The Government of India have no doubt considered the matter thoroughly. They have adopted a bold policy, and if it is successful, if no unforeseen catastrophe happens, it will no doubt turn out to be a wise one. It is a bold policy and I hope it will be a fortunate one.

"Although, as I have said, the Treasury is empty and this is no time to make demands upon it, there is one institution for which I must say a word as regards the future. That is one which has been mentioned by the Hon'ble Mr. Stevens—the General Hospital in Calcutta. Hon'ble Members are probably aware that there was a report issued and a resolution of the Government which was published in the *Calcutta Gazette* on the 25th November, 1896. That report and that resolution are instructive reading. It appears that this hospital consists of very ancient buildings completely unsuited to modern requirements. As to the hospital buildings, one of them was purchased by Government from a native gentleman in 1768 and two of them were built in 1795. The hospital appears to have had very little done for it but to have remained in the hands of the Government of India for a great many years and then to have been handed over to the Government of Bengal. In addition to that it appears that the port-dues collected between 1868 and 1895 amounted to 16 lakhs of rupees, but nothing practically has been done to the Hospital. I will only quote one paragraph from the report in order to show what the position of the hospital is.

'The ventilation is from ward to ward and any effluvia passes, intensifying, from patient to patient.'

"This is a state of things which is most discreditable, if not disgraceful, to any great city, and the position was that the Government of Bengal had a very great surplus of about 59 lakhs of rupees, and that it was intended to carry out these works out of that surplus and out of Provincial revenue. Unfortunately, as appears from the resolution, it was necessary to keep this surplus for the famine, and it appears from the Budget figures that the whole of this surplus is likely to be dissipated in the famine. It also appears that instead of our having any hope that out of the revenue of Bengal in the next few years there will be a chance of accomplishing this work, the revenues have been very much cut down, owing to the revision of the quinquennial contract, and so

far as I can gather, it will not be possible to carry out this work out of these revenues. It appears that the estimated balance for the provincial revenue in the next year is only 10 lakhs of rupees, that is 10 lakhs below the ordinary minimum. Therefore, as far as I can see, we can have little hope of this highly discreditable state of things being remedied unless there is some special provision made for it. I therefore appeal to the Hon'ble Financial Member to make some exceptional provision as soon as he has money to do it, as soon as it is possible. There is no doubt that it is an absolute necessity; there is no doubt that the state of things is disgraceful; there is no doubt that it has been too long delayed, and one must remember that man does not live by railways alone. A hospital in a city of this kind suited to modern requirements is an absolute necessity

"I do not propose to go into the question of the quinquennial revision. It has been very fully dealt with by the Hon'ble Mr. Sayani, and I agree with a great deal of what he has said. I will only say that the position is that certain assignments are made by the Provincial Governments and they are revised at the end of every five years. It has been pointed out by Sir David Barbour that this is not favourable to good administration nor to the improvement of the Province, that it is very desirable to have it put upon some better basis, but he also says it is very difficult to do so at the present time and that there are very great difficulties in the way of doing so. I hope something of the kind will be done.

"I do not propose to go further into the question of what can be done with regard to the quinquennial revision of Provincial Governments There are many Members here who are far more qualified to speak with regard to that, and besides the Lieutenant-Governor of Bengal himself is here, and I would not presume to offer any opinion on the subject except that I may say on the authority of Sir David Barbour that the present position is very unsatisfactory.

"I have frequently have occasion to call attention to the Home charges. I am relieved from doing so on this occasion because the whole matter has at length been publicly investigated. The case for India is being laid before the public, and though it was usual for the authorities at home to burke the whole of the representations that were made, but now that the matter is being publicly threshed out and the verdict of the public can be taken upon it, it will be very much more difficult for them to justify a large number of the charges with which we are at present saddled. I hope therefore, although it will take some time, that we may in the end obtain some substantial relief.

"I was very glad to hear the testimony the Hon'ble Babu Joy Gobind Law bore to the appreciation of the people of this country to the efforts that have been made by the Government to cope with the famine. It was very gratifying to hear from him that the efforts that are being made and the way in which the officers who manage these things give their time and their labour ungrudgingly and the liberality of the Government in providing the necessary funds was acknowledged. In the case of a famine of this magnitude, it is entirely hopeless to expect that there would not be a great amount of suffering and a considerable amount of loss of life. We know from the habits of the people that many of them will not go to the relief-works until they are too starved to benefit by them, and it always must be so. There are no doubt people here, as there are people at home, who will from an idea of respectability allow themselves to starve into such a state that nothing can be done for them before they will come forward and ask for relief. The efforts of the Government have been supplemented by the splendid donations which have been made by England and the Colonies which is now over a crore of rupees, and although, no doubt, we could do with more money, this will be a very substantial amount in order to mitigate the indirect results of famine and set up a large number of persons who are left without resources although their lives may be preserved.

"I do not think I can usefully go into any criticism of the figures of this Budget. It is, as I say, a Budget in which everything is kept at a stand-still. The estimates of expenses for famine and of loss of revenue are conjectural, and all that we have to do is to hope for the best and do the best we can in the meantime; and wait until the storm is over."

The Hon'ble RAI BAHADUR P. ANANDA CHARLU said:—"It must have cost the Hon'ble Finance Minister many a pang to be driven to declare that the year now budgeted for works out a deficit of Rx. 1,986,900, that the ensuing year will work out a larger deficit of Rx. 2,464,000, and that, as an effort to make two ends meet, a loan of no less than four crores must be raised. A gloomier picture it is next to impossible to present. None but men with a heart of flint will nevertheless refuse to him the deepest sympathy in his present sore trial. Few capable of reflection will hold him responsible for the deplorable condition of things we have to face, and may yet have to face, from time to time. One cannot hide from oneself that he has had to take up the financial portfolio with a pre-ordained load and scale of expenditure to which the country had been committed by adventures and policies, the reverse of sagacious—adventures and policies—indulged in, without an eye to the future or with exaggerated notions of the country's capabilities. As I said last year, 'within these ten years the forward policy alone has cost us, *apart from the wars themselves*, an aggregate sum of nearly *seventy crores* and has added to our permanent expenditure no less a sum than *six crores per annum*; and as for the home charges, they have mounted up to over *twenty-five crores* of rupees.'

"Our present Chancellor of the Exchequer had not further the terrible lessons of the last great famine except as matters of cold history and record; for he had not personally to witness or confront the harrowing scenes of its frightful havoc. Judging of it from an unexciting long-arm-chair—I saw one of his room of business—he could not realise the horrors of a widespread famine, except by a powerful effort of a vivid imagination. I suppose financiers, like other men, are averse to fall into a train of painful reflections, for the human mind has a tendency instinctively to shun such. As a necessary result, the measure which had been taken, shortly after the last famine, against the recurrence of such a terrible disaster must have come down to him, shorn of all its well-meant but inconvenient promises, pledges and obligations; for, with all deference to the high authority against me on the point, I cannot help reiterating that a Famine Insurance Fund had been once created by Lord Lytton's Government, no matter what Sir John Strachey's antecedent words of doubtful import may have been—words which should be taken to have been set aside, if the final utterances of the head of the Government are to count for anything. Let me quote his Lordship's words once more:—

'The sole justification for the increased taxation, which has just been imposed upon the people of India for the purpose of insuring this Empire against the worst calamities of future famine, so far as an insurance can now be practically provided, is the *pledge* we have given *that a sum not less than a million and a half sterling*, which exceeds the amount of the additional contributions obtained from the people for this purpose, shall be *annually* applied to it. We have explained to the people of this country that additional revenue by the new taxes is required, not for the luxuries, but for the necessities of the State; not for general purposes, but for the construction of a particular class of public works; and we have pledged ourselves not to spend one rupee of the special resources thus created upon works of a different character, while we exercise the most strict economy in all other branches of our expenditure, so that no greater burdens shall be thrown on the country than are absolutely required by the necessity of the case.'

"I venture to maintain that, even without such an explicit statement, the same result followed. When a particular tax was declared and labelled to be for the saving of lives and for no other object, and the tax was actually levied in pursuance of such declaration, the sums so collected, *without more*, became *ipso facto* the Fund which was meant. I may say that the Fund created itself. Lord Lytton, as I had more than once to point out, went much further. In the noblest of words, he cautioned succeeding Governments against temptations to

divert the funds consecrated to the saving of lives. Those words cannot be repeated too often :—

'The current claims upon the activities and resources of the Government of India are so numerous, so pressing, so important, official forces and imperial funds so necessarily limited that when once the daily, hourly strain of a great famine has been removed from a wearied administration and impoverished treasury, its fearful warnings are soon forgotten ; its disquieting ghosts are quickly exorcised by the conventional declaration of some unexceptionable principle ; its bitter memories decently interred beneath the dull *hic jacet* of a blue book, and there, for all practical purposes, is an end of the matter.'

"But, as fates would have it, he himself was the first to run counter to his own warning. In the very teeth of his own solemn, thrilling words of admonition, he was the first to set the example of diverting the Famine Insurance provision towards carrying on an ill-starred and ill-omened war which was the forerunner of others, and which, as it were, became the nucleus of ever-growing expenditure of colossal proportions, leaving less and less for the internal development of the country or the betterment of the condition of the mass of the people. One unfortunate result of this growing military spirit has been the complete reversal of land-settlement policy.

"The one consideration that was uppermost in the mind, even from the days of the Court of Directors, was the prosperity of the raiyat population so that the taxes levied may—in the Government's own words—leave a margin with a view to meeting any increase in the cost of agriculture and of providing for a rise in the standard of living.

"The new policy of recent years is to give prominence to 'the difficulty of finding other sources of revenue, having regard to the change that had come over the financial position'

"One bitter fruit of this change of policy is already this, that many millions of people have not been able to lay by a competence to enable them to withstand the failure of rains in one single year.

"The first step is always the perilous step in deviating from the straight path ; and what has happened in this country is no exception to that rule. The provision against Famine came therefore to be swallowed up by wars, and appropriated to the maintenance of armaments and frontier defences calling for outlays, out of all proportion to what is left for promoting internal well-being. These brought in their wake too much financial centralisation in the Imperial Government and too much autocracy in higher quarters. These have been the root of the financial collapse of India, and there is no hope of redemption from a chronic state of bankruptcy and of progress in the contented happiness of the people till the present order giveth way for a fresh and better one, conceived in a humane and equitable spirit and sternly carried out in the financial interests of this country. The sincerest Viceroys and the cleverest financiers would, in the face of this stupendous stumbling-block in their way be helpless. In these circumstances all that one could do is to use the language of entreaty, after calling attention to certain matters that have a bearing on the internal development of the country. Irrigation works claim the foremost attention in this respect, and the report of the last Famine Commission, now a quarter of a century old, contained certain suggestions on this point and various blocks have been indicated in it, out of something over 137 thousand square miles of admittedly culturable land in the country, as capable of being turned into sources of plenty. In the tremendous strain on the time and energies of almost every officer of the Government at the present trying moment, I considered it cruel to apply for information as to how many of these irrigation works have been carried out and how much of this vast area has been brought under the plough, nor could I detect it in the sea of figures and tables, embodied in the Yellow Book which the Hon'ble Finance Member was kind enough to give me. I have not had the maps that would help me. But in one sense, the information will have proved unserviceable. Whether on the hypothesis that much has already been done in these directions or on the hypothesis that nearly the whole or a good part of it still remains to be taken in hand, the present famine shows that a vast deal more must be done.

"A distinct promise to revise the situation was held out by Sir John Strachey himself; for he said :—

'Unless, then, it would be proved hereafter by experience that the annual appropriation of a smaller sum from our revenues will give to the country the protection which it requires, we consider that the estimates of every year ought to make provision for religiously applying the sum I have mentioned to this sole purpose; and I hope that no desire to carry out any administrative improvement, however urgent, or any fiscal reform, however wise, will tempt the Government to neglect this sacred trust.'

"Experience of the present has proved the very contrary.

"It is therefore perfectly obvious and imperative that a Fund, such as was created by Lord Lytton's Government, must be re-established as soon as possible and rigidly and scrupulously repeated every year—not to be put into a box and rust there as no one suggested, but ridiculed as if some imaginary person said it, but to remain and accumulate, quite apart from the general revenues and only liable to be borrowed from for investment in reproductive works having a direct effect in minimising famines and entitled to have credited to it all the income accruing from such investment. It is useless in this connection to point out, as I once did, that if all that was suggested at the time had been done since the last great famine, there ought to have been seven crores, either in the shape of paying and fertilising irrigation works or as a credit to the Fund, entitled to be now called out, over and above what has been spent under that head To this Fund I attach the supremest importance, as *that* is evidently the only allotment which the people may call their own or may regard as tangibly conducing to their real and unequivocal welfare.

"The next thing I have to do is to entreat the Finance Minister to commemorate his tenure of office and earn the lasting gratitude of the millions of this country by laying the foundation of Provincial developments and prosperity, by broad lines for decentralization, demarcating definitely between Provincial and Imperial, and by insisting on the British Government making to the Indian Exchequer a substantial contribution year after year towards the cost of safeguarding purely Imperial interests—a cost which now weighs as a mill-stone round the neck of India. Lord Welby's Commission, now sitting, may do something, but not much, for it has been ruled that questions of policy are out of its scope. But the Government of India may properly raise those questions and bring them within the domain of practical politics.

"The Hon'ble Finance Member could in this way beard the lion if he only would. Let me remind him that it ought to wound the just pride and true sense of dignity of any Government that its subjects should so far lose their self-respect and self-dependence as to go abroad from time to time with hat in hand for eleemosynary help to clothe their bodies and to render relishable the subsistence ration which is the utmost left to them or made available to them from their own country's resources.

"If Your Excellency will only lend your powerful support to the efforts of your Hon'ble Colleague in charge of the Finance in the merciful work which I have ventured to touch upon, and if your Government will also inaugurate a system of administration, much cheaper than the present, by utilising considerably more of the local talent and thus carry out a stern policy of retrenchment all round, Your Excellency and Your Excellency's advisers will leave behind you an imperishable name for justice and benevolence.

"This is all that I meant to say as I came into the Council. But after I came there have been some speeches of which I took notes—those of Sir James to-day, preliminary to the discussion, of Mr. James, which I must characterise as original, of Mr. Rees and of Sir Griffith Evans. In my own interest as I should have time for my own Bill—I will postpone the remarks thereon except to say just a few words on one point. It is in respect of the enquiry 'where is the history which records the India of gold?' No such written history exists; but there are facts which prove it. If great parts of the country were jungle, the rest of the country was, I suppose, peopled, and these, not fenced round by artificial limitations, must have lived in an undoubted plenty. Next, there is the phrase—'the Indian pagoda tree' which was invented and put in circulation by Englishmen

themselves. Was that a baseless invention? Again, my Lord, there is the name—'The Indian Nabob,' invariably applied to the retired Civilian of former days—a name given to him not so much for his airs of Bahadurism as for the great wealth he carried with him from India. Did he gather that wealth in the jungles and from famished inhabitants of deserts? Then again, did the English and other European nations vie with one another and struggle with one another, to acquire possession of a country, barren of all money and wealth? An inference seriously drawn from these and other data cannot be summarily dismissed, as has been attempted.

The Hon'ble MR. TREVOR said:—My Lord, I was not a Member of this Council when the last Financial Statement was discussed. But from the reports of the discussion I gather that the Government of India was then more or less on its defence against an assumption that too little was being done for the development of the material resources of the country, more especially in the matter of railway construction.

"My hon'ble friend Mr. Cadell, who was then in charge of the Public Works Department, referred to the fact that in the first complete year of Your Lordship's administration, 360 miles of completed railway had been added to the 18,500 odd miles previously existing, and that if it were possible to carry out the programme that had been drawn up, some 4,000 miles more would have been completed by the close of Your Lordship's term of office, though even this would leave untouched many lines that had already been considered and recognized as necessary or important.

"Your Lordship also was at some pains to explain that Government were fully alive to the benefits, direct and indirect, to be derived from the expansion of railway communication, that many important lines in which almost every province of India had a share had already been undertaken, and that these alone would cost some 35 crores to complete, of which nearly a third had been provided in the budget then under discussion. But, and this is important, Your Lordship was also careful to dwell emphatically on another aspect of the question, and to point out that the one duty above others, laid upon Government by the circumstances, was to resist temptation, to push forward at a favourable time, but to do so at a rate which was not excessive, but could be steadily maintained, to be bold indeed, but not to be rash. Your Lordship insisted on the necessity with this object of keeping the initiative in regard to all the large schemes in the hands of Government, it being only by so doing that a programme can be framed, adhered to and carried out with regularity and efficiency.

"Finally Your Lordship drew attention to the wide and important field still open to private enterprize and to the administrations of parent lines in regard to the construction of branches and feeders.

"My Lord, I recall this passage from ancient history for two reasons.

"In the first place, as my honourable friend opposite has remarked, a change has come over the spirit of our dream. Our critics in the public press now hint, more in sorrow it is true, than in anger, that we are going too fast rather than too slow, and ask us to consider whether it would not be wise to abandon, or at least suspend, our extension programme till times are better, and while I acknowledge with gratitude the support of my hon'ble friends Mr. Rees and Sir G. Evans have given us, I observe that there has been some expression within this Chamber of a similar view. It seems to me that the remarks to which I have ventured to invite attention are as suggestive in their bearing on the question whether we are not doing too much, as they were on the question whether we were doing enough.

"In the next place, it may, I think, be convenient that I should take this opportunity of stating, as briefly as possible, what has been and is being, done in pursuance of the policy foreshadowed in Your Lordship's remarks (which I may describe as the policy of *systematizing* the consideration of Railway projects so as to ensure the application of the money credit and agency at our command to the best advantage), and how the field for private enterprise and the position of private promoters are affected by that policy.

"With regard to the first of these matters, I may perhaps be permitted to expand a little what Your Lordship said last year.

"It is no doubt very discouraging that the first year of renewed activity in regard to Railway development should have coincided with a year of plague, pestilence, and famine, and that we should have no better result to show than that the net loss on the Railway Revenue Account should have increased this year to a total of some $2\frac{3}{4}$ crores with a prospect of a similar loss next year and of an extremely tight money market to work on.

"But it is important to remember that, except in so far as the debit side of the account has been swelled by the interest charges on a larger amount than usual of capital which though expended has not yet begun to earn a return (and this is a condition of things inseparable from the commencement of a period of progress, and an argument for pushing works in progress on to completion rather than for staying our hand), the loss we have unfortunately to show on the Railway Account would have been certainly no less, probably rather more if not a single mile of new railway had been laid. On the other hand, much of the work done, notably on the Saugor-Katni and Ganges-Gogra Doab lines, has furnished employment for persons for whom it would otherwise have been necessary to provide famine relief at considerable cost to the State outside the Railway Account, and with a less assured prospect of an ultimate return.

"Then, again, it must be borne in mind that the loss shown on the direct account includes not only interest at the full all-round rate, on the whole of the Government capital expended on famine protective and strategic lines which are not, and never were expected to be, remunerative, and the heavy sterling interest on the capital of the three remaining guaranteed companies, but also another very serious burden, arising from the clause in the contracts with the three companies in question, which provides that in the adjustment of accounts one rupee of net earnings is to be taken as the equivalent of 1*s.* 10*d.* The result of that provision is that we not only have to incur what I may call the *normal* loss by exchange in remitting the guaranteed interest at the current rate, a process which during the year now closing will, it is estimated, swallow up the whole of the net traffic receipts of the lines in question and nearly a crore and a half besides, but also to assume that it was remitted at one and ten pence and to hand over to the lucky shareholders half of the purely fictitious surplus arrived at by the method of calculation imposed on us. The revised estimate of the amount to be paid on this account for the current year is about $44\frac{3}{4}$ lakhs.

"This loss, as well as that arising from the high rates of interest, compared with those at which money can now be raised, which we have to pay to some of the older companies, is a burden on the railway account with which we have to reckon, and which, though it may be obliterated by going on, cannot be reduced by standing still.

"Your Lordship last year expressed the belief that if the lines made for famine protective and military purposes were kept separate, to which I would add, if allowance were made for such burdens as those to which I have just referred, it would be found that a very sufficient return was realized on the capital we have expended on railways. The return fluctuates enormously from year to year, the net loss shown on the Revenue Account having ranged during the twenty years now ending from as low as about 15 lakhs in 1877-78 to as high as about 2 crores 80 lakhs in 1896-97, and it has been affected by so many varying circumstances and conditions that it is difficult to draw any definite conclusion as to this. But this much may be said, that whereas the loss for the five years ending 1876-77 averaged something short of $1\frac{3}{4}$ crores annually, during the five years now ending, and including the present very unfavourable season, it has averaged a little over 2 crores or only about $3\frac{1}{2}$ lakhs more.

"Considering that we now have 20,420 open miles of railway against 6,862 in the earlier period, and that we have in the later period had to reckon with a rate of exchange of from 15 to 13 pence to the rupee as against a rate of from 22 to 20 pence before 1876-77, I do not think we can be said to have done badly on the whole. We can at any rate claim that the growth of railway traffic earnings has more than kept pace with the growth of railway mileage, and that the net earnings have borne a steadily increasing ratio to the gross earnings.

"While I am not prepared to assert that we can as yet point to a clear and indisputable return on our capital as shown by the Railway Revenue Account, I should like to insist on this, that the Railway Revenue Account shows every rupee by which the direct receipts from railway traffic fall short of the burden which our railway proprietorship and responsibilities impose on the Indian Exchequer whether in the shape of interest on capital raised either in England or in India, loss by exchange, or in any other way.

"What it does not show is the share contributed by the expansion of railway communication to the general stability of our financial position.

"It is impossible to estimate the value of that share in figures. But apart from the benefit to the administration and the promotion (to quote once more Your Lordship's words) of the material and social advancement and political tranquillity of the people, apart from the expansion of trade, and its effect in counteracting the burdens imposed on us by the fall in exchange, I think I may assert without fear of contradiction that there is hardly an important item of growing Revenue, which would have expanded as it has expanded if our railway construction had stood still.

"I shall, I hope, command the assent of my hearers when I say that even 2¾ crores is a small price to pay for all the advantages obtained (my Hon'ble Colleague said last year that they would be cheap at ten crores), and that it would be short-sighted and unwise for the Government of India to allow themselves to be deterred by temporary difficulties from prosecuting their policy of steady and well considered progress, so long as those difficulties can be overcome, and so long as the funds required can be raised on reasonable terms and without resort to additional taxation. I agree on this point to a great extent with my hon'ble friend Mr. Sayani. So long as these conditions I have stated are observed, I have myself some difficulty in understanding what important immediate relief would be obtained by a suspension of the programme. The amount borrowed for public works does not immediately affect the resources available for ordinary administrative purposes, and the grants from revenue or from balances are limited to what can be spared under the circumstances of the year. On the other hand, the loss, both direct and indirect, inseparable from a suspension of arrangements already made and of half finished lines, needs, as my hon'ble friend Sir G. Evans has pointed out, no demonstration. In times of financial pressure the question of ways and means is of course always a difficulty. If any reduction is found to be indispensable, which, however, I do not anticipate, it will, of course, commence as my hon'ble friend has suggested with works which we have not yet begun. But if that difficulty can be got over, I think it will be acknowledged that the existence of famine and distress is a reason for expanding rather than contracting expenditure which does not come out of the pockets of the sufferers nor add appreciably, it may be hoped, to their future burdens, while much of it goes directly into their pockets in the shape of wages of labour. As a matter of fact, we have been obliged to allow earthwork on several lines both in and outside our programme to be commenced in anticipation of our original intention, as a question of famine relief.

"I may add that it is one thing to lay down a programme and another thing altogether to work up to it, and that whereas the programme and the budget contemplated an expenditure of some 10·17 crores, we have, with the best will in the world, been unable to spend more than 8·76 crores, and as the difference is not to be carried forward for expenditure this year, though I hope my Hon'ble Colleague in the Finance Department may see his way to restoring it hereafter when times are better, the financial tension has to that extent been actually and presently relieved.

"Coming now to the second of the two matters to which I referred at the beginning of my remarks, that is, to the steps which are being taken in the direction of systematizing expenditure, and making the most both of our credit and of the funds and agencies at our disposal for the extension and development of our railway systems, and to the effect of those steps upon the field for private enterprise and the position of promoters, I may begin by explaining that the

point which we had most especially under our consideration in the correspondence with the Secretary of State to which my hon'ble colleague Sir James Westland refers in paragraphs 74 and 75 of his statement, and of which the 28-crore programme was the outcome, was whether Companies coming under my hon'ble colleague's first and second categories might not with advantage be allowed to raise rupee loans for themselves to meet their rupee expenditure, the idea being that we should thereby reduce either the amount of our own direct borrowings or the growth of our sterling liabilities as the case might be.

"The general conclusion at which we arrived on that point was that so far as the money was to be raised practically on our own direct or indirect guarantee we should gain little relief to our own borrowings, as depending on the capacity of the Indian money market to absorb rupee loans, by borrowing through Companies instead of direct, while as we can borrow direct on better terms and at less cost and risk of inconvenience, it is better to do so and to lend the money to the Companies than, practically, to allow them to compete with us in the same market.

"The Secretary of State's acceptance of this conclusion was the first step, and led to the preparation of a programme on the principle that all contemplated capital expenditure for which we have to accept financial responsibility, excepting only capital raised on Branch line terms, should be dealt with as one whole, and that of the total amount to be spent in each year as much as possible should be provided in India, either from Famine Fund or ordinary Revenue, or by direct borrowing, so as to avoid unnecessary additions to our sterling liabilities, and at the same time to ensure that the additions to our rupee liabilities shall be as little onerous as possible.

"Another point which we had to consider at the same time with the question of the provision of funds for Companies, was the question of Branch line terms. It was found that those offered in our earlier Resolutions were not readily understood and were sometimes misapplied, and it was also a question, whether Branch Line Companies were in all cases the best or the most economical agency to employ for the purposes in view.

"The conclusions at which we arrived were, shortly, that Branch line terms should be confined to short extensions and feeders—the terms on which long or important lines should be made being a matter for separate consideration and negotiation in each case—and that it is as a rule better and more economical to allow parent lines to finance, and make, as well as work, branches and feeders required for the development of their own systems, so far at least as it may be possible to arrange for funds without exceeding the limits set from time to time on our programme of expenditure as prepared on the principle I have just described.

"While, however, for reasons suggested by these considerations we proposed to keep in our own hands the initiative in regard to branches and feeders as well as to important lines, we fully recognised that there would still remain many cases in which, to secure early execution of a project, or to admit of the employment of local capital in furtherance of local interests and wishes or for other reasons, it might be advantageous to encourage offers on branch line terms, also that a moderate firm guarantee might in some cases be more economical, better suited to the circumstances, and more attractive to promoters than the rebate arrangement held out in our early resolutions on the subject. These conclusions also have been accepted by the Secretary of State and embodied in a revised Branch line terms, Resolution No. 514 of 17th April 1896. The contents of that Resolution are doubtless well known to those who are interested in the subject, and I need not for present purposes say more than that it constituted another step in the same direction as the decision come to in regard to the provision of funds for Companies, and will, I hope, tend to ensure that in the case of branches and feeders as well as of large railways development shall proceed on lines which will not increase our financial responsibilities more than is really necessary and advantageous.

"The third and perhaps most important step is the institution of an annual Conference for the consideration of railway schemes, at which the principal departments of the Government of India will be represented and to which it has

been decided, with the approval of the Secretary of State, that all suggestions and projects for railways should be referred before any action on the part of Government is decided on. Hon'ble Members will find on the table copies of a memorandum and accompaniments which may serve to give some idea of the nature of the work done by the last Conference. The bearing of that work on the preparation of the programme and the manner in which it is proposed to carry on the work of one Conference so far as it refers to schemes held over to the next, I will not take up time by recapitulating or trying to summarize the contents of these papers. But the information they supply will, I hope, be found to cover the ground of my hon'ble friend Mr. Playfair's enquiries, and will, I hope, with what I have already said, be enough to show that even if we are still regarded as overbold, we, at any rate, ought not to be accused of being rash; and that all possible precautions are being taken to secure continuity in such progress as financial considerations may admit of, and to ensure that it shall not be unduly onerous to the taxpayer, or carried out haphazard, or distributed without due regard to the requirements of all parts of India, and the means of carrying it on efficiently and steadily.

"I may add that no projects are entered in the programme unless the traffic estimates show a reasonable prospect of a return, and that even after a project has been entered in the programme my hon'ble colleague in the Finance Department is still most strict in demanding to be satisfied before it goes to the Secretary of State for sanction that the Traffic Estimates have been carefully prepared and properly scrutinized and that the prospect of a return is not illusory.

"Before I leave this subject there are two points in connection with the papers which have been tabled to which I wish to draw attention.

"The first is that the programme which they embody and which looms so large this year in my hon'ble colleague's statement, includes, as he has pointed out, under the arrangements which I have described as the first step towards the systematising of progress, anticipated expenditure by certain Companies falling within his second category (the Bengal-Nagpur, Indian Midland, and others) which are allowed to borrow on their own account for duly authorized objects, and whose borrowings have hitherto been treated as a matter outside the scope of the Financial Statement.

"The other is that when the matter came to be considered in Conference it was found that we had already in hand or under negotiation as many Branch lines as we could well manage for some time to come in addition to all that was included in the programme and to the lines in contemplation by Native States, and assisted Companies demanding no financial assistance. The publication of the contemplated list of Branch lines had, therefore, to be deferred.

"And this brings me to the last matter I proposed to notice. What field is left, it may be asked, among all these precautions, for private enterprise, and what remedy do they provide for the complaint so constantly made by applicants for concession that there is no getting a reply out of Government?

"Well, my Lord, I think I may say that the form of private enterprise which is content to take the risk for the chance of profit, and to make lines without financial assistance, beyond, say, the provision of land and certain facilities of working, will always find us ready to listen. But even in that case it is necessary to be sure that the proposal to which we are asked to assent will not seriously injure existing interests or stand in the way of other projects of more importance or better calculated to serve the country, that we are in a position to see that they are properly carried out, and that they are fairly sound in themselves. For it generally happens that when private enterprise gets into a hole in this country, Government is called upon to help it out! And therefore it will be necessary that all such proposals should be submitted to the annual Conference and their conclusions considered before a concession is given.

"To promoters who want Branch line terms I am afraid I can only reply that at present our hands are full.. At the same time we shall be glad to receive suggestions up to the 15th May each year for lines which are considered suitable. These will be enquired into and submitted to the Conference. When we see our way to proceeding with any of them, a list of such as are

approved will be published, and thereafter specific proposals for any lines included in the list will be received and dealt with, promptly I trust, as they come in. The result, I hope, will be that we shall be able to dispose definitely by the end of the year of all suggestions and proposals which reach us up to the middle of May, and that, if my hope is realized, will, I think, be a considerable improvement on the existing state of affairs.

"My hon'ble friend Mr. Playfair will, I hope, forgive me if I suggest that in his remarks on the tribute paid by Bengal in the shape of Railway Revenue, as compared with the drain arising from the Bombay Railways he has, I think, omitted to notice that the Bengal and Nagpur line does not pay, and that all the profits of the East Indian Railway do not come from the people of Bengal. On the other hand, if the Rajputana railway line be included, the loss on the Bombay Railways disappears.

"In reply to his enquiry about the deferred telegrams, I understand that a notification on the subject will appear in the next *Gazette*.

"I hope my hon'ble friend Mr. Sayani will not see the length at which I have dwelt on the railway question in confirmation of his view that irrigation does not receive sufficient attention. I may assure him and my hon'ble friend Mr. Ananda Charlu that as a matter of fact the expenditure on Irrigation has already been systematised. We are steadily spending on it about 75 lakhs a year, which is a rate sufficient to complete all the large works in contemplation within a reasonable time. The field for such works is not, as my hon'ble friend Mr. Sayani seemed to assume, unlimited. Such field as these is already mostly occupied, to the great advantage of the Revenue and of the people, and the works already completed have done us, as the Financial Statement shows, yeoman's service in this year of distress. But we have learned by experience that large expenditure on irrigation works in those parts of the country when the rainfall is sufficient is often money thrown away. The people will not take the water. And where the rainfall is deficient the large perennial streams, the presence of which are essential to the construction of Irrigation works, are too often wanting. I may add for the satisfaction of my friend Mr. Bhuskute that, in spite of establishment charges, irrigation works, as a whole, are now paying more than 5 per cent. clear."

The Hon'ble GENERAL SIR EDWIN COLLEN said:—My Lord, "This day last year my predecessor, Sir Henry Brackenbury, explained with the ability and clearness for which he was so distinguished, the estimates for the year 1896-97. He dealt in some detail with these estimates which had been prepared under his direction. He also was able to announce the grant of the sum of 49½ lakhs of rupees, or nearly Rx. 500,000, for the completion of the preparations for mobilisation, and he gave the Council a most valuable historical retrospect of his administration.

"I fear that the statement which I shall have to lay before this Council will be far less interesting and for the simple reason that the financial year just closing has been chiefly marked in the Military Department by efforts to postpone or retrench expenditure, and that not very long after I assumed office we found that it was necessary to do everything in our power to restrict expenditure owing to impending scarcity, which has since deepened into severe famine in certain parts of the country. My Lord, I listened with great interest and attention to the observations which have been made by various Hon'ble Members on the subject of military expenditure. I think I may venture to say that these criticisms were characterised by a somewhat mild flavour with one exception. That exception was the Hon'ble Mr. Ananda Charlu, who denounced in strong terms the forward policy and our vast military expenditure. In the course of the statements which I shall have to lay before the Council, I shall endeavour to reply to such criticisms as have been passed, and I hope even to convince my hon'ble friend Mr. Ananda Charlu that what he characterises as the ever-growing military expenditure to colossal proportions,

has not increased in such a high ratio as he imagines it has done. I propose to take the estimates in the following order :—

India Military Estimates.
Home Estimates.
Military Works Estimates.
Marine Estimates.

"Before dealing with the figures of these estimates, I should like to say a few words as to the mode in which they are prepared. As the Council are aware, the Army is now divided into four great Commands—Punjab, Bengal, Madras, and Bombay. In each of these Commands there is a Controller of Military Accounts, who is at the head of the financial system of the Command and is the financial adviser of the Lieutenant-General Commanding the Forces, although he is directly under the Government of India. It is on the Controller that the responsibility of preparing the estimates rests in the first place. He has to construct these estimates in communication with the authorities and departments concerned. He has to pass these in review and to apply every possible test for determining whether the estimates are drawn up in accordance with the rules. The estimates of the great supply departments are forwarded by the Controllers to the heads of those departments with the Government of India, and after scrutiny by those officers the estimates are passed to the Accountant-General who incorporates the whole of the estimates thus received, and those he receives from the Controllers, into one general estimate. Nothing can be entered in the estimates which has not received the sanction of the Government of India. The estimates pass under the rigid scrutiny of the Accountant-General, and they are further subjected to an examination by the Comptroller-General of India and are finally considered by the Military and Finance Departments.

"It will be understood that during the year a large number of proposals involving expenditure are received in the Military Department; a considerable number of these are, after every consideration has been given to them, rejected altogether; others, after being accepted on their merits, are held over till the time when the estimates, prepared as I have described them, are being finally considered in order to see if money is available for measures which are recognised as proper in themselves.

"The home estimates are prepared under the orders of the Secretary of State for India, a great deal of the information being received from India and from the War Office with respect to their charges. The Military Works estimates are prepared by the Director-General of Military Works and Examiner of Military Works Accounts, and, after scrutiny in the Military Department, are finally passed by the Finance Department. I may mention that, with regard to new works, a list is drawn up, often numbering many hundreds of items, in order of urgency, in communication with the Commander-in-Chief, and we have to select those works which are the most urgent for entry in the estimates after we have provided for all obligatory services.

"The Marine estimates are prepared by the Director of the Marine, and the Examiner of Marine Accounts, who in this case stands in the place of a Controller. The estimates then undergo a process similar to that which I have described in the case of the army estimates.

"I will first deal with the revised India military estimates of 1896-97 as compared with the budget estimates for 1896-97. The net expenditure in the budget estimnte of 1896-97 was estimated at Rx. 16,676,500. The revised estimate is Rx. 16,369,400; so that it is Rx. 307,100 less than the budget estimate.

"Now with reference to these estimates, it will at once be asked, how is it that notwithstanding the increased prices, owing to scarcity, for food-supplies for men and animals, there is such a large saving in the revised estimate over the budget estimate? In the first place there have been smaller payments of exchange compensation allowance owing to the average market rate of exchange adopted in the budget, *viz.*, 1*s.* 1$\frac{3}{4}$*d.*, having been altered. This at once gives a saving of about Rx. 81,000. Then there is a large saving of Rx. 120,000

owing to smaller charges on account of mobilisation arrangements. No one would have been more glad than I should have been, if we could possibly have completed the purchase of the whole of the transport, equipments, and stores required for the equipment of the additional troops in the current year; but that was not possible. It will be readily understood that the purchase of large quantities of transport and equipments cannot be effected at once. Those purchases have to be spread over the whole year, and it was intended that the largest portion of them should be made during the cold weather; but before the whole of the purchases could be made, famine was upon us, and taking one item, for example, fodder reserves, which was to have cost about Rx. 37,700, we felt that we must postpone the purchase of these reserves at a time when every scrap of fodder was needed for the cattle of the people.

"The Hon'ble Pundit Bishambar Nath made some remarks with regard to the advisability of not replenishing military stores when famine was staring us in the face. I venture to hope that the explanation I have given will convince the Hon'ble Pundit that the Military Department have given every consideration to the necessity for holding their hands in the matter of purchases of supplies when it was evident that famine was impending.

"Again, take such an item as camel saddles and gear for which Rx. 28,800 was provided. Here it was proposed to adopt an improved pattern, and it was felt that it would be imprudent to purchase a large number of saddles when there was every reason to think we should get a better equipment in a short time. This causes a saving of about Rx. 18,000. We have not been able to get the whole of the 3,250 camels which were sanctioned. A higher price than was estimated for had to be paid, and we decided that no more than the number that could be bought for the sum allotted, should be purchased this year, the balance, 650, being made good next year. Out of the 1,750 mules to be obtained, we have 282 mules still remaining to be purchased.

"In the Medical Department all the requirements have been supplied with some small exceptions. In the Ordnance Department all requirements will be supplied during the current financial year. In the Veterinary Department the same remark is applicable; and under the head Remount Department we shall have purchased the number of horses for the reserve which was provided for in the estimate for 1896-97, so that there will be no deficiencies in that department. Altogether there is a smaller charge for mobilisation arrangements amounting to Rx. 120,000. If there had been no scarcity and our financial condition had remained as it was, we should, with the exception of the camel saddles, have been able to complete the whole of the requirements as estimated for.

"The next important item of diminished expenditure was the less charge under Army and Garrison Staff, Rx. 20,000.

"Then a sum amounting to nearly Rx. 10,000 was saved owing to the cost of the 24th Bombay Infantry while on service at Mombassa having been debited to the Imperial Government. Under Commissariat there were various measures of economy which resulted in a saving of about Rx. 10,000. There was also a saving in the hire of transport, apart from mobilisation requirements, railway charges, etc., which amounted to close upon Rx. 30,000; while other economies in commissariat charges amounted to a considerable sum. In the ordinary establishment fewer transport animals were bought than estimated for which gave a saving of Rx. 15,000. The more favourable rate of exchange prevailing saved Rx. 24,000 in the purchase of Australian remounts; while in the Clothing Department there were smaller demands, and issues were made to Bengal from surplus clothing stored in Madras. In the Ordnance grant there was a considerable saving in Ordnance establishments and in the smaller purchases of stores due to less outturn. This saving amounted to Rx. 75,000. There are also a large number of items with which I need not trouble the Council. I have only mentioned a few of the important items which make up decrease—taking only the principal items—in the revised estimate of 1896-97, of Rx. 506,500.

"Now we come to the more important increases. These are under Grant 4—Commissariat—Rx. 180,000, under Grant 5—Remounts—Rx. 16,000. This rise in expenditure is entirely due to the rise in prices for food-supplies for

men and animals, owing to the famine. The excess over the established strength of British troops caused increased charges for pay, for which budget provision did not exist, and there was an excess deduction made in the budget for the short strength of the Native Army. These two items account for an increase of Rx. 24,000. As regards the British Army, I might perhaps explain that in past years the drafts were calculated so as to bring the establishment up to strength on the 1st April. But in 1895 a change was introduced by the War Office without reference to India, and the numbers sent out provided for the casualties up to the beginning of the following trooping season. The War Office have, however, agreed to revert to the previous sytem. Other items of increase make up a total of Rx. 245,400. But the net result is that the *revised* estimate is Rx. 307,100 below the budget estimate of 1896-97, taking the net expenditure.

"Turning now to the *budget estimate* for 1897-98, it compares with that for 1896-97 as follows: The budget estimate for 1896-97 was, as I have said, Rx. 16,976 500; the budget estimate for 1897-98 is Rx. 16,154,300 for an establishment provided in the estimates of 72,394 officers, non-commissioned officers and men of the British Army; and 143,610 officers, non-commissioned officers and men of the Native Army; so that the budget for 1897-98 is less than the budget for 1896-97 by Rx. 522,200. I will now state the more important causes of decrease in the estimates for 1897-98. We hope to save about Rx. 30,000 on exchange compensation allowance owing to a more favourable rate of exchange. Less provision has to be made in the case of British troops owing to the exchange being taken at 1*s.* 2½*d.* instead of at 1*s.* 1½*d.*, that gives us nearly Rx. 200,000. Then smaller provision is necessary for expeditions and special services, amounting to Rx. 61,000.

"The abolition of the grass-cutters' establishment in British mounted corps in the Bengal and Punjab Commands will give a saving of Rx. 22,000. It has been explained in this Council before that we can no longer with due regard to the interests of the people employ grass-cutters to obtain the grass required for mounted corps, and that we have to make other arrangements, either by contract or by supply, from grass farms.

"Then there has been a reduction in the strength of the mounted infantry in Burma, which gives us some saving; also in various items under the head of Commissariat, while again there is a smaller purchase of transport animals due partly to the revised allotment of the transport in Burma. These two items amount to a considerable sum.

"The reduction of the military expenditure in Burma is a matter which I have specially enquired into; it has declined annually for a good many years past and, as regards the transport in that country, I hope it will not be long before we obtain all the mules we require there from Western China and the bordering States.

"In the coming year there is a smaller provision for the hire of transport and we save by the employment of transport mules in draught work. This gives a saving of Rx. 29,000.

"We propose also to somewhat restrict the purchase of young stock for the Remount Department. We have already 1,400 young stock, and for various reasons we think it advisable not to purchase quite so many as usual. Then there is the more favourable rate of exchange for payment for Australian remounts. These two items make up a saving of Rx. 8,400. There is a smaller purchase of ordnance mules, but that is really a transfer to the home estimates as we unfortunately cannot get the number of ordnance mules required for mountain batteries at present in India. The mountain batteries require mules of a higher standard than is necessary for transport purposes, and we have been advised that we should purchase a certain number of mules from Southern Europe, so as to give the market a rest for the time being. I am in great hopes, however, that by the greater encouragement of mule-breeding we may in the future be able to obtain all the mountain battery mules we require in this country.

"Then there are a considerable number of items of reduction which we think are justified by past actuals. This subject has been very carefully exam-

ined and we believe that in certain cases the requirements have been estimated for too highly. The total decrease, taking, however, only the more important heads, amounts to over Rx. 1,000,000.

"Then we come to the more important causes of increase, and here again I shall only take a few items as examples. The rise in the price of food-supplies for men and animals, and the special grant of compensation for dearness of provisions, under civil rules, to Military employés amounts to nearly Rx. 400,000 As a rule the provision for such supplies is based on the actuals for the three previous years, but the prices now existing are so abnormal, and are expected to continue for at least a portion of the coming year, that we have been obliged to abandon the ordinary method in order to arrive at a correct provision. The Controllers have done all in their power to arrive at a fair estimate, and these figures have been revised by the heads of departments concerned,—the Commissary-General-in-Chief and the Director of Army Remounts. These figures have been since reduced after prolonged scrutiny by the Military and Finance Departments A larger provision has to be made on account of good-conduct pay to British and Native troops based on actuals. Then having examined the returns of the deficiencies in the Native Army during the past twelve months we feel that we must make a smaller deduction for the short strength of that Army; that means an increase of Rx. 12,000 We have to provide for more kit money for recruits, and extra provision has to be made for officers who become unemployed owing to the termination of their tenure of commands, and also for an increase in the number of Colonel's allowances paid in India.

"We have taken in hand a matter which has been under consideration for some time, and that is the management of the dairy farms. It is most essential that the troops should be supplied with pure milk and butter, and a model dairy farm has been established at Umballa combining with it a school for the instruction of managers of Government dairies, and the improvement of existing dairies. We hope that this plan will be gradually developed, and that it will result ultimately in every cantonment in India being supplied with pure milk and butter. This is really a most important sanitary matter, and I have no doubt that from the financial point of view it will be a success if it is worked, as we hope it will be worked, reasonably and properly.

"Another item of increase also needs some explanation; that is the increase of pay to medical officers. It has long been a grievance that certain junior ranks of the Army Medical Staff are not paid sufficiently in India, and a small increase has been made to their pay. Then there is another item of increase which I am sure the Council will not grudge, that is the cost of a medal for the relief of Chitral and the defence of Chitral. That means an expenditure of Rx. 8,500. I regret the delay which has occurred in the issue of the medal, but the Mint took up the work the moment the dies were received from home, and the medals are now being rapidly turned out.

"If we take only the important items of increase—I have only been able to mention some of these—the amount comes to over Rx. 550,000 I have already explained how the estimates are prepared. When these were closed by the Accountant-General we still had to decide how many out of about one hundred items, which had been kept back to see what money was available, should be entered in the final estimates. Under the circumstances of financial pressure, we selected a certain number for postponement, and having consulted the Commander-in-Chief, we agreed to the reduction of about Rx. 65,000 or 6½ lakhs. Those items that were retained were then added to the estimates which were finally closed. I think the estimates may be said to have been framed with economy, that all items of expenditure proposed during the year were carefully scrutinised, and we had to postpone, at the last, many items which in happier financial times we should have desired to retain. The net result is that the budget estimates of 1897-98 are Rx. 522,200 below the estimates of 1896-97. If we were to throw out the gain by the rise in exchange, to eliminate the special charges for mobilisation, and the loss by the extra cost of food-supplies owing to famine, there would still be a saving in the revised as compared with the budget estimate of 1896-97 of about Rx. 302,000, and a

saving in the estimate of 1897-98 as compared with the estimate of 1896-97 of about Rx. 201,000.

"The second of the estimates with which the Military Department is concerned is the home estimate. The home estimates for 1896-97 amounted to £4 365,200 net expenditure; the revised estimate amounts to £4,193,600, showing a decrease of £171,600.

"So much public interest has been attracted to the details of the home charges, which are estimated for in the year 1897-98 as amounting to £4,353,400 on account of the effective and non-effective charges of the Army, that it may be of interest to the Council to know of what these charges consist, more especially as several Hon'ble Members have alluded to the home charges. The payments to the War Office in respect to the British Forces serving in India amounting, as estimated in the coming year, to £760,000, are based on the capitaion rate of £7-10 0 per man serving in India, and the charge for the deferred pay issued to British soldiers on their discharge or transfer to the reserve. The deferred pay amounts to about £180,000 so that the estimated amount for providing the drafts and troops for Indian service sent out from home annually is about £580,000. This amount, based on the capitation rate, includes not only all the charges connected with the training of the men sent out; but various charges on account of educational establishments in England for officers and men, and charges on account of the reception and disposal of invalided and discharged men on return from India. Then we have the item furlough allowances and pay during the voyage of British soldiers serving in India. That amounts to £108,000 and explains itself. The furlough allowances of officers of the Indian service comes to £230,000; and the Indian Trooping Service, *i.e.*, the cost of the transports which take British troops to and fro, £251,800. There is also an item, £6,000, for the passage of officers and troops otherwise than by troopship; and the heading "Miscellaneous," £8,500. While the stores for India amount to £560 800; these are for clothing, ordnance, medical, and commissariat stores required in India. Certain corrections have been made by the Secretary of State to these totals which amount, with those corrections, to £1,920,600.

"Then we come to the non-effective charges. We pay the War Office for retired pay of the British forces who have served in India, both officers and men, £486,000, and there is a charge for non-effective Colonels of Royal Artillery and new line regiments, of £24,800; while the pay and pensions of non-effective and retired officers of the Indian service amount to £1,800,000, the miscellaneous pensions amount to £84,000, and the Indian military service family pensions to £26,000. A correction has also been made in these figures, but we have not got the details. The total as revised comes to £2,431,800, and the grand total under both headings effective and non-effective is £4,353,400. The saving, £171,600, in the revised as compared with the budget estimate for 1896-97, is due to reduced payments to the War Office on account of deferred pay, less payments for the Indian troop service, and large reductions in expenditure on stores. The saving in the estimate of 1897-98, as compared with the budget estimate of 1896-97, is a net decrease of £52,000. The increases are caused by an increase in deferred pay, £30,000, and increased payments on account of the retired pay of British forces, etc., and for the Indian service, £65,600. The decreases are chiefly in the Indian troop service for coal, £9,000, in army stores, £121,300, and other items, the net decrease being Rx. 52,000.

"It is only necessary to point out that when we speak of the charges made by the War Office against India, we must not imagine that the whole of the charges I have detailed are War Office charges, because a large portion of them are strictly debitable to Indian revenues. The charges, I may say for the information of the Council, which are really in dispute, are the payments to the War Office for the British forces serving in India and the non-effective charges for these forces.

"I will now deal with the Military Works estimates. Taking the Budget for 1896-97, including expenditure in England, exchange, and special defences, this amounted to Rx. 1,240,900 and the revised estimate in 1896-97 to

Rx. 1,216,400, so that there was only a small difference between the budget and revised estimate. On the Indian part of the estimates, however, there was less expenditure by about 11½ lakhs, or Rx. 115,000. This was to a large extent due to the sites for posts in the Tochi Valley not having been fixed, and to the impossibility of spending the money allotted. There were several other items upon which the money granted could not be spent, and certain works in the Bombay Command had to be postponed owing to the plague. Turning now to the estimates for 1897-98, the total sum, including English expenditure, special defences, and exchange, is Rx. 1,200,600. The estimates for 1896-97 were Rx. 1,240,900. The difference is, therefore, Rx. 40,300.

"The heads of the Military Works estimate in India are in round figures—

Rx. 500,000 for original works, including works in progress, those to be commenced, and minor works;
Rx. 340,000 for repairs;
Rx. 280,000 for establishments;

and to this we must add other items, such as for Barrack Department, tools and plant. Th new works, 88 in number, comprise water-supply, drainage works, barracks, hospitals, a comparatively small sum for inland defences, and we have also to provide for ordnance, commissariat, and marine requirements.

"We have not been able to do much in the way of ordinary inland defences, and can only spend Rx. 10,000 on these for very urgent works. We have provided Rx. 18,000 for certain works on the frontier and coast defences, but have had to omit Rx. 25,000 for new works required for what are still called "Special Defences." We have provided for the works necessary for the accommodation and health of the troops in the Tochi Valley, at Gilgit, Chitral, and in the Malakand, in the amounts for new works which I mentioned.

"Although the Military Works grant is considerably in excess of the "crore," or Rx. 1,000,000, which was fixed some 17 years ago, we are really very little in excess of the average amount that was granted in the five years preceding the year in which that sum was fixed. Since then the army has been considerably increased, and the area in which military works are required has also expanded.

"I have to deal lastly with the estimates of the Royal Indian Marine. The net budget estimates for the Indian Marine of 1896-97 were Rx. 149,900; the revised estimate is Rx. 120,200, giving a decrease of Rx. 29,700. The decreases are due to less exchange compensation allowance, the absence of certain officers, savings in the dockyards, and in the purchase of marine stores and coal; while the recoveries have been swelled in connection with the fitting of transports for Suakin. Altogether the decreases amount to Rx. 32,800.

"The increases are chiefly due to increased expenditure on salaries of establishments afloat owing to the employment of Royal Indian Marine vesse's in conveying troops to Mombassa and to and from Suakin, and the hire of the *Laipura* for the transport of troops after the wreck of the *Warren Hastings*; to repairs and coals supplied to Her Majesty's ships in the Indian seas, and to indemnification for loss of property to the officers and crew of the *Warren Hastings*. Altogether there is an increase of Rx. 19,900; and taking the increase against the decrease, there is a net decrease of Rx. 12,900, but to that we have to add the receipts due to the employment of Royal Indian Marine vessels for conveying troops from Mombassa and to and from Suakin, which comes to Rx. 16,300; so that the total decrease in the revised estimate, as compared with the budget estimate, is Rx. 29,700.

"The Marine budget estimate for 1897-98 is in net charges Rx. 139,100, whereas the budget estimate for 1896-97 was Rx. 149,900, so that this gives a decrease of Rx. 10,800. The decreases amounting to Rx. 33,400, are chiefly due to exchange compensation allowance and a reduction owing to the loss of the *Warren Hastings*, and to various other items, such as purchase of marine stores and coals, &c. The increases are due to the hire of the transport that will be necessary for performing the duties hitherto carried out by the *Warren Hastings*, repairs and coals supplied to Her Majesty's ships, and other items, which make up a total of Rx. 17,300; showing a net decrease of

Rx. 16,100. Taking into account the receipts and charges, the net saving amounts to Rx. 10,800.

"One word more on the whole of the estimates with which I have dealt; the total saving on India, Home, Military Works and Marine estimates for 1897-98 is over Rx. 600,000 as compared with the estimates for 1896-97, and even if we eliminate the gain by the rise in exchange and the mobilisation expenditure, and on the other hand the rise in prices, the saving would still be very considerable.

"If it is not trespassing too greatly on the patience of the Council, and I fear I shall tax that to the utmost limits, I should like to indicate as briefly as possible the chief events in the work of military administration during the financial year which is now coming to a close. The first thing that occurred was the despatch of a force to Suakim on the requisition of Her Majesty's Government between the 21st and 26th May 1896. A compact force of about 2,500 officers and men, with 1,200 or 1,300 followers, was despatched from Bombay in eight hired transports and in the Royal Indian Marine ships *Warren Hastings* and *Canning*. The force returned in November and December; and although the Indian Contingent was not involved in actual hostilities, we had the gratification of knowing that the services of the force were appreciated by Lord Cromer, a statesman who once sat in this Council by the military authorities in Egypt, by Her Majesty's Government, and that these services were graciously recognised by her Majesty the Queen-Empress of India. It need hardly be said that the arrangements under His Excellency the Commander-in-Chief were in every way thorough and complete, and the Marine Department under Captain Gwyn, who was officiating as Director of Marine at Bombay, performed excellent service in the despatch of the force. It returned to India under the arrangements made by Captain Hext who had then come back from England after giving evidence of a valuable character before the Royal Commission on Indian Expenditure. I need hardly do more than allude to the fact that the question of the Suakin charges formed the subject of considerable discussion between the Government of India and Her Majesty's Government. A blue book has been published, and if they have not already read it, I strongly recommend this to their perusal, and I believe that a careful study of it will induce some of my friends opposite to recognise that the Government of India for a series of years have staunchly fought the cause of India with respect to charges of this nature.

"A very difficult subject had to be taken up by the Government of India during the past year. A Committee, the president of which was Mr Lyall, an able member of the Civil Service, was convened in 1894 to enquire into questions connected with the Military Works and Public Works Departments and the employment of Royal Engineers in India. That Committee furnished a valuable but rather voluminous report which has been exhaustively discussed and dealt with, and we have also had to take up the question of the establishment of Royal Engineers in India and the future organisation of the Royal Engineer service in this country, and many matters connected with that service. As the conclusions to which we have come are not actually complete, I shall say no more on the subject but that it is one which bristles with difficulties, although we hope that we have arrived at an equitable solution of the problems presented to us. I gladly take this opportunity of mentioning that we have received much assistance from the presence of General Heriot Maitland, who was deputed by the War Office to represent their views in this matter.

"Another point which merits attention is that certain Local Corps in Rajputana and Central India, which were directly under the Government of India, have been allotted to the Bengal and Bombay Commands respectively, and placed under the orders of the Commander-in-Chief, while at the same time the powers of the Agents to the Governor-General are safeguarded with reference to the distribution and movement of the troops and other matters.

"I have already given the Council some account of how far the mobilisation requirements for the completion of the equipment of the field army have been fulfilled. The plan of preparing a field army for mobilisation was started in 1886; in the earlier years of its history, the work was entrusted to a Mobilisa-

tion Committee, of which Lord Roberts was President, and the work of that Committee was described by Lord Dufferin as a splendid monument of ability and industry. Year by year in the last ten years improvements have been effected, and a considerable amount of money has been granted. But, although we had for many years desired to obtain the money sufficient for the complete equipment of the whole field army, we felt that we could not press this owing to financial exigencies. Last year a considerable grant was given for the purpose. Owing to causes already explained, we have not been able to carry out our intentions entirely; but, at all events, we have done so to such an extent that the further equipment of the field army has allowed a revision of the arrangements so as to permit a more rapid concentration of the troops when necessary; and I hope that the Commander-in-Chief would say that the field army was now in an efficient condition and ready to take the field whenever its services might be required in any direction. We can never say that the plan is absolutely complete, because year by year we hope to effect improvements which will add greatly to the efficiency of the organisation.

"Good progress has been made in the work of the various Army Departments during the financial year. In the Commissariat-Transport Department I have already described the provision that has been made for the equipment of the field army, and that, with exceptions which are not considerable, the equipment has been provided. Various classes have been held for training non-commissioned officers of the Commissariat-Transport Department. The Bakery classes have produced good results in the improvement of the quality of the bread, and we have under consideration a proposal to extend the system of bread-making on English principles to the Madras and Bombay Commands during the next year. We have closed certain Government Flour Mills and have obtained flour from the open market at less cost. Under improved local arrangements in the Chitral District, and by fostering local enterprise there and along the line a larger quantity of supplies has been obtained locally. In the Bombay Command the Commissariat Department has taken up the grass supply, and grass farms have been started with good results, while in the Madras Command we have now sanctioned the formation of grass-farming operations as an experimental measure.

"As to transport, a small number of mules have been lent to the planters in the Darjeeling District; a larger number of siege-train bullocks have been lent to the Postal Department, and a certain number of mules. I only hope that these small beginnings will be largely developed, as I have long been convinced that the adequate employment of transport in peace time is a matter which must be thoroughly pushed. The transport in Burma has been re-distributed, resulting in a large saving. We have gathered further experience in transport from the Chitral campaign, and have just had a committee at Rawal Pindi under Mr. Thorburn, the Commissioner of Rawal Pindi, to assist us in coming to a conclusion in many important matters in which we think we can improve the arrangements for the collection of transport in case of emergency.

"In connection with the Army Clothing Department, I may mention that the new clothing scheme has been introduced from the 1st April 1896, which will, I think, be satisfactory and economical. Good work has been done in the clothing factories both at Alipore and Madras. During Colonel Toker's tenure of office many improvements have been made, and I regret that we are now losing his valuable services.

"In the Ordnance Department the reserves of small-arm ammunition for Magazine rifles, ·303 for British Infantry, and the Martini-Henry for Native Infantry, are complete. The power to manufacture ·303 ammunition has been increased. The proof of projectiles and fuses has commenced at Balasore, and very satisfactory results have already been obtained. Two ordnance field parks have been completed for the field army for some years, but the parks for the other divisions are now nearing completion. The experimental manufacture of cordite will, I hope, commence in the last week in April.

"In the other departments connected with the Military Department, such as the Military Works and Remount Departments, excellent progress has been made in the various branches of their work.

"Several of the speakers who have preceded me have mentioned the subject of the home charges.

"Considerable attention has been attracted to the evidence given before the Royal Commission on Indian Expenditure. In 1893 the Government of India pressed for an independent enquiry into the charges made by the War Office and other matters, and in 1895 a Commission was appointed. I suppose there are very few members at this Council who have waded through the two large volumes which represent the preliminary report of the Commission, with the evidence and appendices. Since those volumes were issued a considerable amount of interesting and important evidence has been published in the press in respect to War Office charges, by Lord Northbrook—who has long devoted himself to the subject and probably knows more of it than any man living—by Lord Roberts, Lord Lansdowne, and by my predecessor, Sir Henry Brackenbury.

"The Government of India for a great many years have represented that the charges made by the War Office are higher than they ought to be. On the other hand, the War Office contend that they treat us too generously. I should like to refer for a moment to the despatch which was sent home by Lord Lansdowne's Government in 1890, which will be found in one of the volumes to which I have alluded. To that despatch was appended a memorandum by Colonel Anderson, now Controller of Military Accounts in the Punjab, and myself. I do not claim to be an expert in these matters, but I devoted a great deal of time to the subject, and the principles we advocated in that memorandum were accepted by the Government of India and are embodied in that despatch. Those principles have been accepted by Your Excellency's Government.

"In the first place the Government of India did not admit that the short service system as at present worked is the best adapted to the requirements of India. According to the War Office actuaries, a British soldier will render to India no more than five years and four months' service when normal conditions have been reached. We said that was not sufficient; that the service should be somewhat longer, and that if the present arrangements cannot be altered, India should receive some consideration when the charges are assessed. An effort has been made to show that what we wanted was to return to the conditions of old days of enlistment for unlimited service or of long re-engagements. This is an entire misinterpretation. All that we want is that men trained at the expense of India shall give a somewhat longer service, and shall not be sent home at the age of 25 or 26 just as they are becoming valuable soldiers. The normal condition of the army has not been reached, but the ratio of young men under 25 has increased from 33 per cent. in 1876-77 to 55 per cent. in 1895-96. It has also been asserted that the Army is physically more efficient than it was before when longer service obtained. Now, I think, I can prove that the decrease in mortality among British soldiers in India is not consequent on the introduction of short service; it is the result of measures which have been introduced at the expense of the revenues of India, beneficial to the health of the soldier. In the early part of this century the mortality was no less than 84 per thousand, but it gradually decreased until about 1877, when short service began to tell in India, the mortality was only 12·71. This was a year of low mortality. The year previous it was 15·32, and 1878, 21·46. In 1895 it was 15·26, so that as the enormous decrease in the death-rate occurred before short service was introduced, or began to have effect, it cannot be said that short service alone has decreased mortality.

"With regard to invaliding, it is undoubtedly the case that the invaliding ratio has diminished, but there has been an increase in the percentage of invaliding of men under 25 years of age and under five years' Indian residence, so that if the figures mean anything they mean that invaliding has increased among the more youthful portion of the army, and consequently that short service *per se* has increased and not decreased invaliding; in fact the decrease in the total invaliding ratio is no more due to short service as such than the decrease in mortality is a consequence of short service. In the numbers constantly sick there has been a considerable increase. The ratio of decrease was

from 71·35 in 1860, to 55·82 in 1877, when as I have said the effect of short service began to show itself in India, and it rose to 93 in 1895. I affirm, therefore, that the contention in Lord Lansdowne's despatch of 1890 that we do not get an army which is physically as capable as an army containing a larger proportion of men of somewhat longer service, is absolutely correct.

"We maintained also in that despatch that the charges on account of the depôts at home were too much, as they were based on an organisation not adapted so much to the requirements of India as to the requirements of England. It is easy to say, 'do not let us quarrel about details,' but unfortunately it is upon the details that the capitation rate of £7-10-0 is based; we say that a £5 rate is sufficient. For my part I am quite willing to abandon details and to accept the £7-10-0 rate, if the War Office or the Treasury will give us a considerable rebate on the total sum. There were a great many other points with which I need not trouble the Council, which we took up and upon which I was examined when I went home in the winter of 1895-96 for the purpose of appearing before the Commission. We maintain that the Indian Army does supply a great addition of military power to England, that a large part of the British Army is trained at the expense of India, and that the whole of the men passed into the reserve from India have been maintained out of Indian revenues. We affirm that the guiding policy in this matter, as in the case of troops employed on expeditions, should be that of true reciprocation, and that the expenditure charged by England should be limited not by arithmetical details but by statesmanlike and broad appreciation of the conditions of the two countries. My Lord, my hon'ble friend the Maharaja of Durbhanga has, in alluding to these home charges, quoted the evidence of Sir Henry Brackenbury, and has called attention to the fact that Sir Henry Brackenbury considered that a very large portion of the charges levied by the War Office should be abandoned. I can only say that personally I should welcome any liberality from the Treasury at home of that kind, but I think my hon'ble friend did not perhaps appreciate that Sir Henry Brackenbury also proposed a large increase to the subsidy now given by India on account of the Navy. Taking the two accounts into consideration, they would work down, as mentioned by Lord Welby, the Chairman of the Commission, to about £150,000, and that is considerably less than the reduction we proposed in the despatch of 1890, and which I personally pressed for before the Royal Commission.

"As to the subsidy now given on account of the ships of the East India Squadron employed in Indian waters, I believe that it was never originally intended by Her Majesty's Government to charge any subsidy at all, and as we have provided defences for our ports at great cost, a defence squadron which has been, and is being, paid for by India for the protection of those ports, and docks for naval requirements, we consider that the subsidy which now stands at £100,000 should be reduced to £50,000, the figure at which it stood some years ago. Personally, I consider that England could well afford not to charge any subsidy at all, and that to keep the great trade routes open by means of the Navy is far more imperative in Imperial than in purely Indian interests.

"I think we may hope that an equitable solution of the questions, which have been discussed for so many years, may be looked for at the hands of the present Commission.

"A great deal of attention has been attracted of late years to the sanitary requirements of the army in India, and in view of what has been said in some of the evidence which has been given at home, I think it necessary to lay before the Council a brief statement of facts. As you are all aware the British soldier in India is housed in excellent barracks, many of which, however, were constructed 30 to 40 years ago, and a considerable portion of the army is provided for in the hills in hut barracks during the hot weather—a measure largely due to the late Sir George Chesney. During this period much has been done with regard to water-supply, and I think it will interest the Council to know that out of the whole number of cantonments in India, between 50 and 60 have been supplied with pure water at a cost of 78 lakhs or Rx. 780,000, although I should think that this statement is scarcely complete, and that the figure is much more likely to be close upon a crore of rupees.

"In his evidence before the Commission Sir Henry Brackenbury is reported to have said that we are providing a cantonment or half a cantonment a year with pure water, and that some cantonments may be twenty or thirty years before they obtain a satisfactory supply, but that if we could take a lump sum of money we should not have our soldiers dying of fever and cholera because they have not a pure water-supply. The Council will be glad to hear that for the year 1897-98 we have provided a sum of about 11 lakhs, or Rx. 110,000 for either the completion or the initiation of projects for water-supply in cantonments, but although I think Sir Henry Brackenbury may perhaps not be aware that we are doing so much at the present moment, I entirely agree with him that a sum of this dimension is not sufficient, and that if we are to make a great stride in this direction, some other means must be adopted than that which now obtains of allotting a comparatively small sum annually out of the grant for Military Works.

"As far back as 1888 I advocated the completion of the water-supply of Indian cantonments from funds to be raised by loan. An eminent statesman characterised this as a voluptuous policy, and I am fully aware of the financial objections, and that from the financial point of view, it is more advisable to charge such expenditure against revenue, than to delude ourselves into thinking we have a surplus of revenue, by leaving out of the reckoning this heavy, though temporary, expenditure. However this may be, and I entirely admit the financial argument has great force, we cannot help looking with envy at the enormous sums England raises by loan when special expenditure is required for ships or fortifications, or barracks and sanitary measures, and the fact remains that we cannot complete our water-supply and drainage projects by the allotment of comparatively small sums annually, and I venture to hope that as our finances improve we may be able to largely develop and carry out our sanitary projects. The Council know what ravages cholera and enteric fever have made in the youth of the British Army in this country. Cholera has diminished of late years; in 1895 there were only 32 deaths in the British Army in the whole of India; but the enteric fever ratio of admissions to hospital has risen from 3 per thousand in 1871-72 to 26 per thousand in 1895-96. Bacteriological science has done much for us, but so far as I can gather from the report of the Sanitary Commissioner with the Government of India, we have not advanced as far as we hoped we should have done. Good barracks adapted to varying climatic conditions, pure water-supply, and good drainage are the great essentials to sanitation in cantonments, both British and Native, and we should never rest until these are obtained. The Hon'ble Pundit Bishambar Nath has drawn attention to the housing of the Native Army, and as far as I could gather he appeared to consider that while we provided for the British troops in palatial barracks, we rather neglected the Native Army. I agree that some 10 or 20 years ago the accommodation for the Native Army was not what it should have been, but at the same time we must recollect that that accommodation is much better than the classes from which the Native Army is drawn. A great deal has been done of late years to improve the accommodation for Native troops; we have to do it gradually as, according to the present system, we cannot provide any very great sum of money for the purpose; but I can assure the Hon'ble Member that there is no subject which I have more at heart, and I should rejoice if means were found to make a still greater improvement than has already been made in the housing of Native troops. We hope to start a plan of having sanitary officers in all cantonments to look specially after sanitary matters. This idea was broached long before the present time when naturally sanitary requirements have come specially to the front. And here I should like to say how deeply we sympathise with Bombay, Poona, and Karachi in their endeavours to stamp out the plague. The army is bearing its part for soldiers, British and Native, and Volunteers are assisting the civil officers and community in doing splendid work.

"In connection with the requirements of the Indian Army in the matter of officers—a subject which has more than once been alluded to in the Council,—it is known that some years ago we endeavoured to establish a reserve of Indian officers to be drawn from the official and non-official classes. It would take far too long to explain the whole scheme for this reserve, which was very carefully

considered by a Committee, the President of which was General Morton, now Adjutant-General in India. But this proposed reserve of officers has from one cause or other never been practically in existence until quite lately, when many officers of the Public Works Department loyally volunteered for it. We thought that it would be a good plan to have a Committee comprising the official and non-official element to investigate the causes of the comparative failure of our scheme. A Committee has lately been sitting in Calcutta, again under the presidency of General Morton. But I wish to acknowledge most cordially the aid which we have received in the investigation of this subject from the members of this Committee; and our thanks are especially due to the gentlemen who represented the commercial and planting communities, for the valuable assistance which they have given to us.

"The Hon'ble Pundit Bishambar Nath also mentioned the subject of local supplies. I can assure him that the policy of obtaining local supplies is one which shall be pushed forward as far as it is possible. It is a policy which I have always had at heart, and the Military Department, I venture to think, has for a great many years done a great deal to support and develop that policy. Only lately we have instituted enquiries with regard to the more extensive use of country coal both in the Ordnance and Marine Departments; and I have done my best to further a policy which is, I believe, absolutely sound—that of making India self-supporting in all military requirements to the utmost extent practicable. I do not say that we have by any means reached the limit, but we have been able to do a good deal.

"As to the economies which can be effected in the future, I think that we must continue on the path we have followed in the past by endeavouring to analyse constantly all sources of military expenditure to see how the expenditure can be reduced with full consideration of the efficiency of the Army. I do not in the least depreciate the value of small economies, but I do think we must continue to apply ourselves to the investigation of the great sources of expenditure; but while I am on this part of the subject, I should like to invite the attention of the Council to the table which is given at page 51 of the Financial Statement. Taking the whole expenditure as estimated for in 1897-98, both in India and England, including exchange, you will see that it amounts to Rx. 23,341,200 net; but out of that amount no less than Rx. 19,862,300 is for regimental pay and allowances, Commissariat, Ordnance and non-effective charges, in none of which charges can any extraordinary reductions be looked for, so that Rx. 3,451,600 which includes, it may be added, a large amount of expenditure which cannot possibly be reduced, is the balance which is left after providing for these absolutely obligatory services.

"Under the head of Home expenditure to which I have drawn attention, we do trust that we may look for some reduction.

"In the Military Works expenditure, although I should be the last person to say that more economy cannot be practised, yet the wants of the army are so great in various ways, especially in sanitary improvements, that it is quite out of the question to look for a reduction of these estimates, especially when we remember that the maintenance of the great defensive works which are now practically complete must necessarily involve considerable annual expenditure.

"In the expenditure for Marine, economy is the watchword of the administration, while at the same time the service is in a highly efficient condition. We have sustained a great loss by the wreck of the *Warren Hastings*. Our only consolation is to know what perfect discipline was maintained by all concerned, and to this is largely attributable the small loss of life which occurred. We cannot be too grateful for the kindness, sympathy, and assistance afforded by the French officials and inhabitants of the Island of Réunion, and we have asked Her Majesty's Government, if this has not been done already, to mark our high appreciation of the conduct of the officials and inhabitants generally in a suitable manner.

"My Lord, the Hon'ble Mr. Ananda Charlu, as I remarked before, attacked what he calls the forward policy which he says has added six crores per annum to the Military expenditure. He has said that the ever-growing military expenditure is of colossal proportions; he traces every kind of evil to the Afghan War

and he asserts that military expenditure is the root of the financial collapse of India. Now, my Lord, this is a subject which I may say I am somewhat familiar with. Many years ago, in Lord Dufferin's time, I analysed the military expenditure and satisfied His Excellency as to the correctness of that analysis. Later on, in more recent years, I went into the subject very closely again. The Accountant General has been good enough to supply me with a statement showing the net military expenditure for several years past. I have already occupied too much of the time of the Council, and I cannot possibly go into details, but I have taken the two years 1887-88 and the budget estimate for 1897-98. In the former year the expenditure is Rx. 13,666 308; in the latter year Rx. 15,277,800. This is of course without exchange, the loss in which I suppose my hon'ble friend will hardly attribute to the Afghan War; the difference between those two years, *i.e.*, the rise in expenditure, is Rx. 1,611,492. I maintain that there is no addition of military expenditure which is not accounted for by the increase of the army and by the various beneficial measures which have been introduced for the welfare of the British and Native troops. For example, in the case of the latter, the increase of pay to the Cavalry and Infantry.

"There is a curious idea which is prevalent, that in the Council of the Governor General there is a strong military party ever insisting on the increase of military expenditure, always demanding the advance of our frontiers, and ever ready to plunge the country into expeditions or campaigns. I can only say that my experience teaches me—and it is a pretty long one—that such a party does not exist and never existed. It is perfectly true that, as Lord Lansdowne remarked some years ago in this Council, our military liabilities have increased because on our northern and southern limits we are approached by two great military powers. Now, we desire to keep on the best of terms with them and to avoid the least chance of collision; but if the state of things which Lord Lansdowne described has come to pass, the most elementary prudence dictates that we should provide adequate means of security. We have no quarrel and desire no quarrel, but the security of our land frontiers can only be obtained by an efficient and mobile army. An increase in the Army, of the most moderate description, was resolved upon some twelve years ago by Her Majesty's Government and the Government of India; and, apart from increases in pay to the Native Army, which were absolutely necessary, and of expenditure on measures of improvements essentially necessary for the welfare and efficiency of the soldier, whether British or Native, there has been no expenditure which is not accounted for by that increase. I have gone over this subject over and over again and can come to no other conclusion.

"As to there being a military party always desirous of advancing the frontiers of India and carrying out what has been termed "the forward policy," I should like those who think of the question to define what a forward policy is. In the history of all nations with enormous land frontiers such as we possess in India, it has undoubtedly been found necessary to exercise some control over the tribes in mountainous or difficult country on the land frontiers, and that has been the case in India. The result of what may be called the "backward" policy—going into the hills, and burning villages, and then coming out again—was certainly not successful. The great settlement of the limit of British influence with the Amir of Afghanistan, which has advanced so much under Your Excellency's guidance and which we trust will be completed at no distant date, will contribute enormously to the pacification and civilisation of the tribes immediately beyond the border of the plains. We have an example in what has been done by Sir Robert Sandeman, and how peace now reigns where anarchy and bloodshed always prevailed. I can vouch for the fact that among all the statesmen to whom is attributed the support of the forward policy, there is not one who desires to do more than to exercise such a measure of control as will secure and make safe the countries for which we are primarily responsible. I have always been an advocate of the very gradual extension of that influence, but it is inevitable that our influence should be extended, and I believe it to be in the best interests of humanity.

"But when we talk of the vast military expenditure which has occurred in obtaining the Army in India, taking into account every charge which can

possibly be assessed, what does it amount to? The trade of India, I am told, may be totalled at over Rx. 459,000,000; the cost of the Army, as we find in the Financial Statement, including charges in England, exchange and everything, amounts to Rx. 24,500,000, including military works, that is to say, 5·34 per cent. of this enormous trade; and this Army is for a country containing some 300 millions of human beings and an area of 1½ millions of square miles—a country, too, possessing many thousands of miles of land and sea frontier which it is necessary to guard.

"In his speeches in this Council my predecessor on more than one occasion alluded to what he called the last official will and testament of my lamented friend Sir George Chesney. Sir Henry Brackenbury informed the Council that Sir George Chesney had left with him a minute showing what were the reforms and improvements which he considered were still necessary in the Army of India. As Sir Henry Brackenbury pointed out, most of them have been accomplished; but the memories of India are short, and I venture to think that sufficient justice has not been done by the public, or even by the Army, to the great efforts, attended in most instances by complete success, which were made by Sir George Chesney during his long and distinguished career for the improvement of the administration and organisation of the Army in this country.

"In his speech in this Council last year Sir Henry Brackenbury summarised the wants of the Army. He said that the Army required more officers, more transport, and more garrison artillery.

"I can assure the Council that the first subject—the want of officers—has not been overlooked by the Government of India; it has been for many years a subject of anxious consideration, but our financial condition has never been prosperous enough to admit of our bringing the proposals to increase the strength of officers on the Indian establishment into practical effect. All I can say at present is that the subject is not likely to be shelved, although we must recognise the difficulty, if not the impossibility, of our adding to our military expenditure until our exchequer is in a more satisfactory state.

"In the matter of transport, I should be disposed to say that what we require is not so much an additional number of transport animals and carts, for we already have a large number of mules and carts, but an improvement in the organisation we possess, so that cadres of transport may be more readily expanded, additional attendants and reserves of this class of followers obtained, and that we require also that transport should be more largely and usefully employed in time of peace.

"As to increasing the garrison artillery in this country, I fear that must be postponed, and that we must look to the artillery volunteers to help us, at all events at the great ports. We already have very efficient bodies of volunteers who would prove valuable auxiliaries in the case of an attack by a naval power.

"It is scarcely necessary to inform the Council that the system of Military administration and the division of the army into four great Commands, has continued to be during the past year an unqualified success. That is one of the reforms largely due to Sir George Chesney; its key-note was decentralisation of military business and military finance, and in the further development of those principles I look hopefully to the future.

"If in the presence of the Commander-in-Chief I venture to express my own belief that the efficiency of the army of India is at a very high standard, I am only repeating what has been said by far higher authorities than myself. During the last ten or twelve years, under Lord Dufferin, Lord Lansdowne, Lord Roberts, Sir George Chesney, and in more recent years under Your Excellency and the present Commander-in-Chief, great improvements have been effected in the Army of India. Every year these improvements have been carried to greater completeness by the Commander-in-Chief and by my predecessor, Sir Henry Brackenbury, contributing to the comfort and welfare of the soldier, both British and Native, and to the maintenance of an efficient and mobile army administered economically, in the truest and best interests of the Indian Empire.

The Hon'ble SIR JOHN WOODBURN said:—"My honourable colleague on the left (Sir James Westland) has got a formidable business before him.

He has had very voluminous criticisms to meet, and it may perhaps lighten his task if I take up the answers to those remarks that have been made with regard to Famine work in India. In the first place, I should like to express the great pleasure with which I heard my friend the Hon'ble Babu Joy Gobind Law praise the efforts of the local Governments and officers in mitigating the pressure of famine in the land. Those remarks have the entire approval of the Government of India. His Excellency himself and I on another occasion have expressed the high appreciation of the Government of India, and now I am glad to say the people of India have endorsed it of the disinterested and devoted efforts that the local officers have made in famine relief. The Hon'ble Mr. Sayani in his remarks asked us to bear in mind the recommendations made by the Famine Commissioners, and to consider how far those recommendations had been given effect to during the twenty years that have elapsed since they were published. The first of these recommendations was the greater efficiency of relief, and I think everybody will agree with Babu Joy Gobind Law and others who expressed their opinions in the matter that the efficiency of the relief in this famine is certainly superior to the efficiency of the relief in any previous one. The measures which the Famine Commission suggested as the result of their enquiries and experience have been for the first time at the disposal of the local Governments. They have been acted upon with intelligence and promptness, and the result has been, as I think I may say with confidence, a measure of completeness in the application of relief such as has never before been attained. It is not possible in any human endeavour that there shall not be imperfections, and I admit freely that there may have been occasions in the conduct of our operations in which the success has not been as great as we hoped it might be. But taken it as a whole I reaffirm that the efficiency of the relief on this occasion has been equalled on no previous occasion. The efficiency of the relief has been greatly assisted by the railways which have been carried over India. The Hon'ble Mr. Cadell and the Hon'ble Mr. Rees both bore testimony to the assistance which has been given and the quickness with which supplies have been poured into the countries requiring them: that system of communications that scheme of railways has without doubt not only assisted the supply of food to the people, but has greatly lessened the cost of the famine operations themselves. One speaker referred to the famine wage being a mere subsistence allowance. The famine wage was fixed at the instance of the Famine Commission as the result of their experience in operations of the kind. They came to the conclusion that unless the wage was a subsistence wage only, it would act as a temptation to people to abandon private work of every description and to flock to the Government relief works, and thus it would paralyse private undertakings of every description throughout the affected area. Mr. Cadell spoke of the relief given on this occasion by the suspensions of the Government revenue as one of the best methods that have been used on this occasion for the mitigation of distress. I should like to take this opportunity of expressing not only my own grateful thanks, but the grateful thanks of every local Government of India to the Finance Member for the readiness and the generosity with which he responded to every application made to him, whether for direct expenditure upon famine relief or for his sanction to the suspension of the revenue demands, whenever local Governments thought these suspensions expedient. In these matters there has been a great change from the attitude of the Government twenty years ago. The next recommendation of the Commission concerns the provision of communications and the extension of railways. I have already spoken about the railways. As to canals, Mr. Trevor has mentioned that large sums are being spent every year or every project which is likely to be useful. Experience has taught us in the past that many of these projects are neither remunerative nor do they add materially to the expansion of agriculture and the prosperity of the peasantry. It is proper therefore that in the light of this experience Government should be cautious and circumspect in the extension of irrigation projects until they are satisfied they will answer the purpose for which they are intended. The most radically important of the arrangements which the Famine Commission contemplated is the improvement in the condition of the people. It is perhaps

inexpedient that a Member of the Government of India should express any very confident opinion on that matter, for he may be said to be not an impartial judge. Measures have however been taken from time to time by the Government of India to take stock of their position in this respect, and they believe, rightly I hope, that the condition of the people is steadily improving. The opinion of Mr. Charlu is an opposite opinion, but I should like to refer him not to the opinion of Englishmen like Sir Griffith Evans and Mr. Rees, although they are both men of large experience in India, but the opinion of a distinguished fellow countryman of his own Province, Diwan Bahadur Srinivasa Rajhava Aiyangar, whose book I read in Madras the other day with interest. He has written a large book in which he has concentrated all the researches and experience of his life in India, and he has come to the conclusion that the condition of the raiyats in Madras has immensely improved during the last fifty years. I cannot say whether the opinion of this gentleman is right or wrong, but there is the opinion of an Indian who has devoted his attention to the subject. I remember that one of the conclusions he came to was that the raiyat in Madras was now called upon to pay out of his produce exactly two-fifths of what he was expected to pay out of that produce forty years ago. If that is a just conclusion there can be no doubt that the comfort and prosperity of the Madras raiyat is now very much greater than it was then. In this connection I jotted down during this discussion some notes from papers which are accessible to all Members of Council. If it is true that the Indian raiyat is more capable now of withstanding famine than he was forty years ago, I think we ought to get some evidence of that from the expenditure of the famine account. Now if Hon'ble Members will look at the Famine Commissioners' Report they will find that the expenditure on the famine in Behar in 1873-74 on precisely the same area which is stricken by famine now was 6½ crores of rupees. If it is true as my friend the Maharaja of Durbhanga has said, that the present is the greatest calamity, the most severe disaster that has befallen India during the current century—if that is true, then we should expect the expenditure on the famine of 1896-97 to be somewhat in proportion. Now, if Hon'ble Members will look at the Budget estimates they will find that the estimate of the famine expenditure for this vast disaster is less than the expenditure on the single famine in the district of Behar in 1873-74. In 1873-74 in those identical districts in Behar which are visited by famine now the daily average on relief for the period of ten months was 960,000 souls. At this present moment the famine has lasted several months, and I am grieved to say that there is every prospect of it lasting for several months more, but even at this present moment, when we are I hope, half way through the famine, the total number on relief works is not half of what it was throughout those ten months twenty years ago. I do not assert that this is a conclusive or complete reply upon the question of the condition of the people; no doubt there are other circumstances which affect the result which has been attained in the present year. Nor do I assert for a moment that the people are not poor, or that the Government can in the least relax its efforts to improve their condition and their welfare, but I do venture to believe that this is a corroboration of the information which reaches the Government from many sources that the condition of the people is better now than it was twenty-five years ago, and that one of the causes why the expenditure per head of the population this year is so much less than it used to be is that the people themselves are really better fitted to stand famine when it does come. Mr. Playfair made a remark about emigration as a relief to the population. In all these remarks the Government of India heartily concur. They have done all that they can in the past to assist emigration outside India. They have done all that could be suggested in the way of assisting people to migrate from one part of India to another, where food was cheaper and more land was available, and where the means of livelihood were more easily obtained. But in India the system of helping natives of one part of the country to migrate to another has, I regret to say, never been very successful. The remarks that Mr. Playfair and the Maharaja of Durbhanga have made will be communicated to the Chief Commissioner of Assam. I am afraid that some of the experiments in that direction

in Assam before have not been very successful. The extreme unhealthiness of the country has deterred people from emigrating and undergoing the privations which are incident to the opening of an unhealthy locality. But there is nobody who from his energy and experience in these matters is more likely to work out a practical scheme for the emigration of the people than the present Chief Commissioner of Assam. Any assistance that the Government of India can give to prepare a scheme of that kind will be most cordially and gladly given. My friend Mr. Bhuskute spoke about the Charitable Relief Fund. I did not quite follow all his remarks at the moment, but I think if he will look at the despatch which was written by the Government of India to the Secretary of State he will not find it stated there that any of those objects which he mentioned lay outside the scope of the system of Government relief. What was said was that the prime work of the Government of India was the preservation of life. The Government of India never said that the help of orphans, the assistance of cultivator, the provision of food for the *pardanashin* lay outside the scope of their benevolence. But they did say these were the objects to which private charity could best direct itself. Not as long as human nature remains sympathetic will it be possible to prevent private charity coming to the relief of the poor, and what the Government of India did suggest was that these were the directions in which private charity would be most useful. They did say they were unable with their official organization to get the information which was reached by private committees. There was work therefore for private committees to do in that direction which was valuable for the help of the poor. Now that mention has been made of this Famine Fund. I should like to take this opportunity of repeating what the Maharaja of Durbhanga said, and expressing as far as I can on behalf of the Government of India our admiration of the munificent gifts of the charity and good will of England. I feel with the Maharaja that out of that charity and good will has sprung a new bond of sympathy and good feeling which must unite the people of India and England into a warmer community than has existed for many years—a community of feelings and interests which we all, Indians and English alike, welcome as a fresh departure in warmer and closer accord."

His Honour THE LIEUTENANT-GOVERNOR said:—"My Lord,—If in spite of the invitations held out to me I say very little to-day, it is not because I have little to say, but because I recognise the fact, which I insisted upon last year, that there ought to be no distinction of interests between the Supreme and the Local Governments. We are all under the shadow of a common calamity, and this is not the time or place for me to discuss the question whether the burden of that calamity has been equitably adjusted to the shoulders that have severally to bear it. There are no doubt points at issue between the Government of Bengal and the Financial Department as to the local budget for next year and the details of the new Provincial Contract, but those issues must be settled in an official manner by official correspondence. I will only, therefore, now express the hope that the Government of India will, when the present period of storm and stress has passed over, see its way to reconsidering the precise terms of the present settlement, and will, if it can, restore to Bengal some portion of the contribution which we are now called upon to make to meet the enormous deficit caused by famine. I believe we shall be able to show at the proper time that the way in which the emergency has been met in Bengal will compare favourably—I do not say as regards efficiency, for other Provinces may hold their own in that respect, but as regards economy— with the results in any other part of India.

"I must, however, be allowed to throw out one general suggestion with reference to the policy of Provincial Contracts as at present worked. I do not entirely accept Mr. Sayani's views of these contracts, but there is much force in some of his trenchant criticism. We have, as he has pointed out, the authority of Sir David Barbour in his evidence before Lord Welby's Commission for the statement that the present practice is not in accordance with the original intention. He says:—'I must say that when the Provincial system was started, I do not really think it was intended that the Provincial Government should have a portion of their resources taken away periodically.' 'If you

take all the surplus you to a certain extent remove all the inducements to the Provincial Governments to economics. It is a weakness the periodical revision may be necessary under present conditions, but it diminishes the value of the system. Take the Province of Bengal, with a population of between 70 and 80 millions of people: well that province is big enough to have an independent financial system.' He goes on to explain that owing to financial exigencies the Government of India takes at revision not only its own share of the increase in the divided revenues, but also a portion of the increase that has accrued to the Provincial Government. I do not know that I agree with Sir David Barbour when he says he 'would rather see the Central Government embarrassed than the Provincial Governments starved,' but he is certainly dissatisfied with the existing system. Again my predecessor, Sir Charles Elliott, speaking with all the authority of the President of the Financial Committee of 1885-86, and an ex-Member of the Supreme Council when the Bengal Contract of 1892—97 was under consideration, strongly urged a modification of the present system 'so that the contract should be a continuing one not subject to sudden ruptures and renewals, but that its leading principle should be that all the revenues of the province should be Provincial, the Government of India receiving a certain percentage on the entire sum which should be the contribution of the Province to Imperial Government and defence.' He also represented 'the unreasonableness and the hardship of requiring every province to give up a constantly increasing share of its revenues whenever a new contract is framed.' I am not now concerned with defending or advocating Sir Charles Elliott's particular proposals: I take perhaps a stronger view than he did of the claims and responsibilites of the Imperial Government. But I quote him as being with all his unique experience profoundly dissatisfied with the present system. Sir J. Westland will probably tell us as he told us last year, and has quite recently told me that Provincial Governments do not understand the system or its *raison d'être*. My Lord, I think we do understand it—at any rate we have learnt by suffering what we have to accept as the authoritative interpretation of it. But what I venture to urge is this, that the Government of India should, with the consent of the Secretary of State, refer the whole question to a Conference at which the Provincial Governments should be adequately represented, and endeavour to lay down the lines of a system which would be satisfactory to the Provincial Governments while meeting fairly the undoubted exigencies of Imperial finance. No system can be sound which with all its admitted advantages of diminishing Imperial interference in petty details, leads to so much quinquennial bickering and heartburning and involves so much uncertainty and haphazard in Provincial Administration. My Lord, I wish to do nothing to diminish the power or prestige of the Imperial Government. My instincts and experience are all in favour of a strong central administration. But I do not think that the present system is favourable to strong administration. It places the Imperial Government in what seems to me a false position—a position of apparent antagonism to its own local agents. In framing it and working it, successive Finance Ministers and Secretaries of State have simply dictated their own views without giving Local Governments an opportunity of being heard, except as to details after principles had been laid down authoritatively, I had almost said despotically. I should wish to see Your Excellency's Government initiating a change in this respect. The Local Governments want to have their say as regards principles also. It would, I feel certain, strengthen, and not weaken, the Imperial position. Again, if the policy of the present day is to be one of decentralisation in legislation and finance, let us for any sake devise a workable scheme. As matters stand, the Provincial Government is bound to justify to its local Council and the local public financial measures which it is only allowed to criticise within hard-and-fast limits laid down by the Financial Department of the Government of India. Speaking for myself, I am ready to give loyal effect to all the orders and policy of the Supreme Government. If I found I could not conscientiously do this, the remedy is easy, and in my own hands. But it would be better for both of us—and I speak for all Local Governments—were our financial relations regulated as much as possible by automatic self-acting principles—save when some serious calamity like widespread famine or national exigency like a great war comes to sweep away all ordinary rules

and rally, as they would do, all the Local Governments to the side of the Supreme Government in simple and self-sacrificing unity. That is, my Lord, the present position, and I refrain from any criticism of the Hon'ble Member's Budget. I cannot, indeed, admit that the contract arrangements of the next five years ought to be dominated by the fact of famine in their first year. Here, however, I find myself tempted outside the lines which I laid down for my own guidance in this debate and I will say no more. I will only therefore urge again that the time has come for examining here in India—and not by Commissions of non-experts sitting at Home—the whole question of the financial relations of the Provincial to the Supreme Government, and I am sure that if in making this examination Your Excellency would only take the Local Governments into co-operation and confidence, a happy issue would result both for them and Your Excellency's Government.

"I have now, before I close, to say a very few words with regard to the speech made by the Hon'ble Mr. James. The Hon'ble Member has arrogated to himself the rôle of enlivening the sombre and dreary course of the discussions in this Council by a series of light and playful pleasantries. I was at first, therefore, somewhat doubtful as to whether I was to take seriously the attack he made upon the Province I have the honour to respect, but as he went on it appeared to me that he really did mean it, and then I could only account for the attack by recognising the fact that we had among us a smiling Rip Van Winkle come from the sands of Sind who was absolutely ignorant of the whole course of Administration in the recent history of Bengal, and who had not taken the trouble to get up the case which he was so ready enough to start. He made an attack indirectly upon the Permanent Settlement. I need scarcely say that no responsible Government would ever dream of making any attack upon the Permanent Settlement of Bengal. The idea that the Permanent Settlement can be touched is an old exploded fallacy which I believe no Government in India—until we have come to be ruled by Socialists from Whitechapel—would ever dream of putting forward. But it is said that because Bengal has benefited so much by the Permanent Settlement, it is right, proper, and fair to the other Provinces of India that it should be severely taxed, and the hon'ble gentleman told us that we ought to levy local rates and local taxes. As His Highness the Maharaja of Durbhanga has already pointed out, the slightest acquaintance with the Bengal Statute Book would have revealed to him the fact that Bengal does now levy an enormous amount in local taxes, no less than 87 lakhs of rupees being realised by provincial and local rates in Bengal. The Hon'ble Member made various suggestions as to local taxation."

The Hon'ble Mr. JAMES :—"A Police rate—Provincial taxation, not local taxation."

His Honour THE LIEUTENANT-GOVERNOR :—"He certainly suggested that we ought to impose local rates. If Provincial is used in a limited sense I may say that half of the sum I have mentioned is provincial taxation, and is devoted as at present to works in Bengal. The Hon'ble Member described an imaginary conversation of his with a Collector who pointed to a road and said he had got half a lakh of rupees from Government for that road. Well, if we got half a lakh for that road, he got it from provincial cesses, for the Government of Bengal has no funds of its own to spend for such purposes, except such funds as it receives from these cesses. Then as regards the question as to whether the Bengal Government pays its fair share of taxation as it stands. I think the faintest study of the Yellow Book would convince the Hon'ble Member, if he chose to refer to it, that this province pays far more than any other province in India, and if it is able to do so, I maintain that arises largely from the settled condition of its land tenures. What has to be recognised is that since the Permanent Settlement the lands and landed interests have become largely sub divided. Infinite varieties of tenures have been created, and sold and resold for value. The landed interest in Bengal is not represented merely by a few rich landholders as Mr. James seemed to assume. We have some rich landholders, and I am happy to say that the rich landholders

do more than their duty by their estates, but we have an enormous landed interest in Bengal contributing to Provincial and local taxation of various kinds. I will not detain the Council longer. I will only say the Province of Bengal is quite open to examination in regard to its finances and in regard to the position which it occupies with reference to its contributions to the funds of the Imperial Government."

The Hon'ble SIR JAMES WESTLAND said :—My Lord,—I shall have to address myself perhaps at some length to the observations regarding the system of Provincial Contracts which have been made by the Hon'ble Mr. Sayani and by His Honour the Lieutenant Governor of Bengal, but before doing so I desire to point out to the Council how entirely justified I was in the opening remarks which I made in pointing out that the Finance Minister was on these occasions subjected to continual demands for money and that he got no assistance whatever in finding a way to obtaining that money. I find the Hon'ble Mr. Stevens and the Hon'ble Mr. Sayani, both of them, pressing me with the view of getting additional assignments to their respective Provinces. His Honor the Lieutenant Governor has also made exactly the same demand. The Hon'ble Mr. Stevens has pointed out the desirability of our engaging in sanitary and other improvements, and the Hon'ble Mr. Bhuskute has also pointed out that it is desirable that at the cost of the revenues of India money should be furnished for the re-establishment of the peasants who have been left in dire distress in consequence of the famine. For all these purposes it will be seen that money is sought for from the Finance Minister, but with the exception of certain proposals from the Hon'ble Mr. James not a single indication has been made as to where the Finance Minister is to find the money. There is always a theory that by setting some mechanical operation in motion the rupees will be produced, and that is the notion against which I warned the Council before the debate began, but which apparently has guided the Hon'ble Members in some part of the recommendations which are made to me. It is quite true that one suggestion has been made with regard to the revenue, namely, that we should extend the system of the Permanent Settlement in Bengal to the other Provinces of India. This suggestion was made by the Hon'ble Mr. Sayani in almost the same breath in which he pointed out the desirability of securing all sorts of beneficial progress to the Provinces and to all Provincial Departments. Surely it is impossible for any Finance Minister to carry on the government of a country with perpetual demands for progress in all expenditure, if he has to settle his principal source of revenue in a permanent fashion so that no further income can be got from it.

I shall come back to the question of Provincial Contracts and the relations between the Provincial Governments and the Supreme Government, but I wish first of all to make some remarks upon the observations which the Hon'ble Mr. Charlu has offered with reference to the Famine Fund. I should have thought that the current year in which we are spending an unlimited quantity of money upon the very objects for which this Famine Fund was set aside, gave sufficient proof of the wisdom of the policy on which that Famine Fund was based. I should have thought that this was the last year which any adverse critic of the Famine Insurance policy would select for criticism, because it is the year in which as it were we have finished the prescribed cycle of events, the year in which all the preparations which had been made according to the policy of Famine Insurance were coming to maturity, and in which we were now to prove whether the Famine Fund really had met its objects or not. I am not going to bandy quotations with the Hon'ble Member regarding the original intention of the pledges which have been given by the Government on the subject. I am very glad to see one thing, however, and that is that he admits in his speech that the words of Sir John Strachey at least do not support the extreme view which he takes in this matter. Sir John Strachey was even more the author of Famine Insurance than Lord Lytton was, and if he finds that Sir John Strachey's ideas regarding the administration of the Famine Fund do not altogether agree with his own, I should think the first suspicion that ought to cross his mind is that it is he and not Sir John Strachey that is wrong. But I suppose he will admit, that Lord Lytton himself is an authority on the subject and that Lord

Lytton himself can state exactly what it was that he meant, and I would take this opportunity of quoting a short explanation which Lord Lytton gave and which bears upon this very subject. He said in discussing one of the Financial Statements :—'As regards the alleged diversion of our Famine surplus from the purpose for which it was raised, I think that my Financial Colleague has sufficiently shown that there has been no such diversion of it. The Government of India when defining that purpose distinctly repudiated any intention of regarding or treating the proceeds of famine taxation as a separate fund, or a branch of the revenue in any wise differing as regards the financial conditions of it, from the funds required for the administration of justice, the maintenance of military establishments, the provision of public education, or any other recognised permanent claims upon the revenues of the state.'

So that Lord Lytton's opinion also regarding the proceedings which had been taken at that time is not in conformity with the Hon'ble Mr. Charlu's views as to the way in which our Famine Insurance Fund ought to be managed. I should think also that the Famine Commission might be reasonably quoted as an authority on this subject. They delivered their Report on the 7th July 1880 so that it can hardly be said that their views on any subject were based on any intention of justifying the misconduct of the numerous Governments which have succeeded Lord Lytton's. Their statement is "To this end arrangements were made to secure a surplus of one and a half millions of income over ordinary expenditure in addition to the annual surplus of half a million otherwise regarded as proper. It was determined that this surplus should not take the form of a fund specially allocated to meet the cost of famine relief, because such an arrangement would be financially inconvenient and objectionable. The intention was simply that asource of revenue should be provided which would enable the Government to carry out the principle on which it had for some years insisted—that the relief of famine distress must be regarded as a charge constantly liable to recur which must be met like all other obligatory items of State expenditure." When the Hon'ble Member, therefore, says that the Famine Insurance Policy cannot be carried out without setting aside separately from the general revenue accounts in some separate form or other a distinct body of money, he is evidently basing his opinion not on the authority of statements made by the founders of the fund and by the Famine Commission at the time of its institution but upon some pre-conceived notions of his own which he has read into the statements then made.

His Honour the Lieutenant Governor has been referring to a certain tax which was imposed in Bengal for the provision of roads, communications and other local expenditure. Now it is very curious that this particular cess is one of the items and in fact the principal item in what was called the famine taxation. It will be found quoted in the Financial Statement of 1879-80 where Sir John Strachey enumerating the taxes which had been imposed on account of famine began the list by putting down the Bengal Public Works cess, at that time 33 odd lacs. This cess was by law applied to the construction of roads and to various other local requirements, and if that cess was imposed as "famine taxation" and was declared to be applicable to roads, etc., and has been so applied ever since, I ask the Hon'ble Mr. Charlu how according to his plan it can possibly be the case that when a particular tax was declared to be part of the famine insurance taxation, the sum so collected became *ipso facto* the fund which was instituted. It must be obvious if in the policy of the Famine Insurance it is laid down that a tax shall be levied upon lands in Bengal and that it shall be applied to communications, roads and other local objects, and that the levy and expenditure of this tax is nevertheless part of a Famine Insurance Fund or Grant (I do not care by what name it is called),—surely it is perfectly obvious that in that policy there was no intention to bottle up a Famine Grant in any particular shape or to put it into any particular receptacle into which when the famine came upon us we should be able to dip our hands and find the money ready for us. The Hon'ble Member goes on to tell us that it is perfectly obvious and imperative that a Fund such as was created by Lord Lytton's Government must be re-established, and then he goes on to tell us 'it is useless in this connexion to point out as I once did that if all

that was suggested at the time had been done since the last great famine, there ought to have been seven crores either in the shape of paying and fertilising irrigation works, or as a credit to the Fund, entitled to be now called out over and above what has been spent under that head.' I ask is that not exactly the position in which we are at present. Have we not got 7 crores? Hon'ble Members will see the exact figures given in my statement. The exact figure comes to a little over seven crores, but we have got that money exactly in the position the Hon'ble Mr. Charlu says it ought to be, namely, either in the shape of fertilising irrigation works or as a credit to the Fund. It seems to me therefore that according to the views which are taken by the Hon'ble Member, although we may not have followed—and in my belief ought not to have followed—the method which he lays down, still we have attained precisely the result which his method would have reached, and the attainment of that result is the best proof that the Famine Insurance policy of the Government is that policy which ought to command his assent.

I am not going back over the old ground. Hon'ble Members for the most part know, as well as I do, that Sir John Strachey and the founders of the Famine Insurance Fund looked forward to the time when we should not be able to meet our current expenditure out of our current revenues, because our expenditure would be dreadfully enhanced by the necessary provision for famine relief, and our revenue would be very much curtailed by the same cause. We have reached that stage now, and under ordinary circumstances if a Finance Minister were to present a Budget which declared that in the current year there was a deficit of two millions and that in the next year he expected a deficit of $2\frac{1}{2}$ millions he would be bound at the same time to state in what manner he intended to provide for that deficit. In any sound financial system it would not be possible to pass over that deficit without pointing out in what manner it was proposed to meet it. But the whole object of the Famine Insurance Fund is to provide beforehand for this very deficit, and as pointed out in my statement we regard and accept this deficit now as a set-off against previous surpluses brought about by reason of the Famine Insurance Policy, and we therefore meet the deficits of these two years by simply putting them down in our accounts, and we nevertheless claim every credit before the world for a sound financial position.

Now, my Lord, to go on with this vexed question of the Provincial settlements. The Hon'ble Mr. Sayani, if I correctly followed him, stated that the arrangements of the Government of India were made upon the theory that the revenues were not the revenues of the separate Provinces and were not appropriable to the expenditure of several Provinces but were the revenues of a common fund, the local Governments being merely the agents of the Government of India for their realisation. I think he mentioned the theory in some words like these, only for the purpose of condemning it. Well, I wish to assert that theory in the most positive manner I can. The revenues of India are the revenues of the Government of India—its constitutional possession. The Government of India is a body created by Act of Parliament, and if reference is made to that Act of Parliament it will be seen that the revenues of India are the revenues of the Government of India and of that Government alone. Every action that the local Government takes in respect of them must be justified by a specific order of the Government of India; the Local Governments derive their powers entirely from the Government of India and apart from that Government they exercise no financial powers whatever. Now I may go on to expand a little and show what the real meaning of this claim is. I may begin by taking an illustration. I will imagine that the residents of Calcutta come to His Honour the Lieutenant-Governor of Bengal with a remonstrance regarding the application of the revenues which are levied in Calcutta itself. The stamp revenue in Calcutta, the excise revenue in Calcutta, the assessed taxes levied in Calcutta, all amount to a very large sum. The inhabitants of Calcutta, I will imagine, make a representation to the Lieutenant-Governor that it is unjust that these revenues levied in Calcutta, and paid by the residents in Calcutta, are distributed over the expenditure in other places. His Honour the Lieutenant-Governor would justly point out that this claim was based on a false foundation. He would point out that the wealth of Calcutta was entirely derived from its being the commercial centre of a large tract of country; he would point out that the admini-

stration of this tract of country was in the hands of the same body (whether you talk of the English Government or of the Government of India or of the Government of Bengal) which administered Calcutta. He would point out that if the districts behind Calcutta were in the hands of another power, if they were not organised, if they were left either to anarchy or possession of a foreign Power, Calcutta would never be what it is,—it would not be a centre of the wealth and commerce of the great Province of Bengal. He would point out further that in taxing the people of Calcutta he was only taxing the general wealth of the Province of Bengal. Its commerce all tends to this centre. Many wealthy landlords who derive their revenues from the lands in Bengal come to Calcutta and spend it here. Calcutta is a city which is inevitably linked with the Districts of Bengal and cannot be separated from them and would not exist without them He would further say it was out of the question that different principles should apply to the taxation and administration of Calcutta and of the districts of Bengal, and he would say that for financial purposes they must be taken as one single fiscal body and that the tax levied in one place must be considered appropriable to the expenditure all over the provincial administration.

But now I go further and ask why this principle should stop at the confines of Bengal. The division between Bengal and the North-Western Provinces is merely a geographical line. There is no division as regards the distribution of wealth or trade. There is no division as regards the fact that all this country, whether the North-Western Provinces or Bengal, supplies the commerce of Calcutta. Calcutta derives its commerce and its wealth from the whole of the North-Western Provinces and even from the Punjab as well as from Bengal. The same argument therefore which justifies His Honour the Lieutenant-Governor in using the taxation which is levied in Calcutta as part of the general funds usable for the general purposes of his administration, carries us farther and shows that the appropriation of this taxation cannot be confined within those boundaries, but the amount must be, in part at least, equally appropriable even further North. Bengal is a wealthy country which has many large cities, but its wealth is derived from the fact that it lies in such a position that the wealth and trade of other Provinces drain through it. The revenues of Bengal therefore cannot be justly claimed by the people of Bengal as entirely appropriable to their own purposes, but must be considered at least with reference to the claims upon them arising out of the administration of the Provinces further away. I am taking Bengal only as an illustration, but exactly the same arguments apply to the revenues of Madras and Bombay. They are all territories which derive their wealth from the fact that they lie between a hinterland and the sea, and that through them the wealth of that hinterland passes to the sea-board.

I take another illustration to shew that the revenues of these provinces cannot be claimed as appropriable only to expenditure within their geographical limits. Supposing Bengal existed, as at one time it did exist, as a separate Province; that the North-Western Provinces were in the hands of a foreign Power which owed no allegiance to the British Crown. What would be its necessities? It would have for one thing to maintain a very large army. In the case of Bombay, if you go a century back, you find that it was surrounded by great and warlike Chiefs of Rajputana and Central India, and by a powerful Mahomedan Chief, the Nizam; the Mahratta powers were continually on its frontiers; and Bombay had to maintain its integrity by possessing a large military force. The same may be said of Madras. Mysore at one time was a foreign territory and Madras had to protect itself by a military force against Mysore and also against the Government of the Nizam. The British Power has advanced since these days. It now covers the whole of the interior country and the consequence is that Bombay, Madras and Bengal have no longer to maintain within their borders the military forces which under a different system they would have to maintain. The number of soldiers in Bengal is very small, but the reason is that the army, which under other circumstances we would have to maintain in Bengal, has passed forward into the Districts of the North-Western Provinces and is now scattered over those Districts and also over the Punjab. The warlike populations, which under other circumstances would swoop down upon Bengal and against which Bengal

would have to protect itself, are now themselves peaceful subjects of the British Throne, and are held from a military point of view by the soldiers which are located within their territories. Similarly, in the case of Bombay we have now moved its troops forward. They are stationed in Mhow, they are stationed up the valley of the Nerbudda, they are stationed within the Nizam's territory at Hyderabad. But those military forces would have to be located in the military districts of Bombay, if circumstances had not changed so as to enable us to carry them forward into other lands. Now can it be legitimately claimed in any way that the revenues, on the one side of Bengal or on the other side of Bombay, are not legitimately appropriable to the maintenance of these forces. Every Province in India gains enormously by the fact that the other Provinces in India are held under the same dominion as itself. It might be possible to imagine a state of things where Bengal was possessed by the English, the North-Western Provinces by Russia and Bombay by some other Power. Under these circumstances, what would happen? Would not each of these Provinces be burdened by an enormous military expenditure from which at present it is entirely free. So that every Province benefits by the fact of the other Provinces being grouped and combined with it under the single tenure of the British Power. If that is the case you see there again the argument which prevents any one of those Provinces, from claiming any exclusive right to the benefit of the revenues raised within its geographical area, and justifies the Government of India in looking upon the whole of those revenues as contributed to one common fund which is to be administered not for the benefit of the particular Province but for the common purposes of the Empire.

I need not go on to talk of the other mutual relation between the Provinces. Railways now run joining one Province to another and linking them into one common system. You have the charges of the central administration in this country and the charges which are administered by the Secretary of State. You have the payment of interest on debt. In all of these each Province has its share. On all these grounds you find that it is absolutely impossible—even if you were to attempt to sit down and work out the *problem*—to assign any particular revenues as properly appropriable to the expenditure in any one Province.

Still less is it possible to consider them as assigned to the comparatively small portion of the expenditure which is called Provincial, and here there is one great mistake made by many members. The importance of Provincial expenditure naturally bulks very largely in the eyes of civilians. They see round them what is being spent upon civil administration and they see in every direction the many requirements that have to be met in civil administration, and in all those matters in respect of which financial powers are given to the Local Governments. It is not unnatural for them under these circumstances to regard the administration of the Provinces as the main purpose of the revenues of the Government of India. But really this is not the case. If you look at the accounts you will find that there is no justification for looking at the Provincial Governments as having to provide for such a large proportion of the expenditure. I pointed out this last year, but I would ask the attention of Hon'ble Members to the Yellow Book which I laid upon the table a week ago. If you look at the accounts there on page 13, where the whole of the expenditure of India, in India not in England, is distributed between Imperial, Provincial, and Local, you will find that the expenditure on Imperial account amounts to 44½ crores and the expenditure on Provincial account amounts to only 20 crores—less than half the Imperial. So that even as regards the distribution of expenditure between Imperial and Provincial, the Provincial only bears a very small share. This also shows you how impossible it is to base any theory of financial administration upon a system of the appropriation of the revenues of each Province to that Province and to no other Province.

Every Hon'ble Member will admit, I fancy, the entire truth of the theory which I have been urging—the theory which regards all revenues as revenues of a single empire—so far as concerns the circumstances which existed before the Provincial service scheme was initiated. Before 1870 every expenditure wherever it was incurred was expenditure of the Government of India. Now I would ask what is there in this Provincial scheme which leads Hon'ble Members to suppose that it ever was the intention of the Government of India to give up any portion of its revenues. That was in no degree the purpose of the scheme, taking it either in its

initial form in 1870 or in its subsequent form in 1877. It was merely lopping off a certain portion of the common revenue and placing that portion of revenue in the hands of the Provincial Government, as agents of the Government of India, under certain definite conditions and terms, and telling it, "you have the charge of all this expenditure, and we give you so much of our revenues in order to meet it." You will not find in any of the documents relating to the institution of the Provincial service scheme any foundation whatever for the theory that the Government of India at any time parted with its dominion over its own revenues or intended to apply any new system of administration to them. In the same way as before 1870 or before 1877 it was free to apply revenues derived from any part of the Empire to the expenditure in any other part, in that same way it remained free and has remained perfectly free up to the present time. And so when the Hon'ble Mr. Savani tells me that the Government of India is always coming down on the Provincial Governments and asking them for more and more, and when His Honour the Lieutenant-Governor begins to talk of my demanding money from him in this last Provincial Settlement—a contribution from his revenues—I deny the position altogether. I admit that the Government of India five years ago assigned certain revenues to the Government of Bombay, to the Government of Bengal and to other Governments but that assignment was made for five years only. It was distinctly limited to that term. At the end of the five years the Government of India re-enters absolutely into the rights it previously possessed, and then, if the Provincial Government is to continue to exercise any financial powers, a new Provincial Settlement has to be made.

Now upon the question of periodical revisions I wish to point out that, if it were possible to regard the assigned revenue and the assigned expenditure of any Provincial Contract as both of them absolutely stationary, it is obvious that a contract made in 1877 upon the basis of the stated amounts of expenditure and of revenue, is a contract which could subsist for all time. But both revenue and expenditure are progressive and, I am thankful to say that, at present, at any rate, apart from the calamities of the present season, revenue is more expansive than expenditure. Now upon an increasing revenue there are these claims: In the first place there is the claim of the tax-payer. The tax-payer has a right to demand that we shall not spend the whole of our taxes if we can carry on the administration with a smaller amount. He has a right to say that we should be as economical as possible and that we should not consider ourselves justified in perpetually levying from him the same rate (and an increasing amount) of taxation if by any means we can secure a reduction of it. That, therefore, is the first claim upon an increasing revenue—the claim of the tax-payer. The second claim—and I deliberately put it in the second position—is the claim of an increasing expenditure. In a country like India, progressive in all Provinces, more in some and less in others, there are continually new requirements which have to be met. I admit that the increase of revenues ought in some measure to be diverted to meet these requirements; but it is obvious that if we admit an increase of expenditure equal to the increase of revenue, we shall never have anything whatever wherewith to satisfy the first and primary claim which I regard as that of the tax-payer. What we actually do when we take a Provincial Contract, is that we divide the revenue for a time between the Imperial Government on the one side, and the Provincial Government on the other. As a whole, the revenue, Imperial and Provincial, is about equal to the expenditure, Imperial and Provincial. Altogether the total revenue does not exceed the expenditure more than 2 or 3 per cent. of the amount. While we hand over to the Provincial Government a share of that revenue equal to its expenditure, we keep for ourselves on Imperial account a share of the revenue which is equal to our share of the expenditure. Now taking both of these together, as I pointed out, we would be in a very unsound financial position if we used the whole of the increased revenue in meeting increases of expenditure. The obligation lies upon the Provincial as well as upon the Imperial Government to limit its expenditure in such fashion that it shall have some revenue to give up—some revenue which can be utilised, if possible, for the remission of taxation. It is this necessity—an absolute necessity of a sound financial system—which gives rise to these periodical revisions of the Provincial Contracts. It is not consistent with sound finance

that we should find ourselves at the end of five years in such a position that the Provincial Government has got to retain the whole of the revenues that were assigned to it five years before, because it is obvious that if that were the case there would be nothing remaining, so far as the Provincial share of the revenues is concerned, to satisfy what I have called the claim of the tax-payer. Now in what possible way are you to make a contract of a permanent character which will meet this claim of the tax-payer. There are two ways in which you can do so. In the first place you can follow the plan which we at present adopt, that is to say, we make over the revenues definitely for five years; we make a comparison of revenue and expenditure when we come to the end of the five years, and if we find it possible, we call upon the Provincial Government to give up part of its revenues, that is to say, part of the increase of the revenue which has taken place during the five years. There is another way in which it can be done, and that is that instead of giving the Local Government the whole of the increase of its share of reverue, we can say it is only to get half or some other proportion, and the remaining half is to be resumed to the general account in order that, if possible, it may be utilised for remission of taxation.

His Honour the Lieutenant-Governor has quoted from Sir David Barbour an opinion which Sir David Barbour gave before the Commission now sitting in London, that this intention of periodical revision was not present to the minds of the original authors of the Provincial system. I am afraid that Sir David Barbour at that moment had forgotten his facts. I shall read a sentence which is taken from the Financial Statement of 1877-78, the very Financial Statement which developed the system of assignments of revenue. In fact Sir John Strachey in this statement is talking of the new provisions for the assignment of specific revenues in place of an assignment fixed in amount. What he says is:—

"The most important of the revenues transferred are excise, stamps, and the hitherto reserved revenues under Law and Justice: the net revenue assigned under these heads is £640 000; and the transfer has been made subject to certain conditions. These sources of revenue have gone on pretty steadily increasing throughout India, and it is not proposed to surrender to the Local Governments any part of that normal growth of income which might have been expected to continue if no change of system had been made. On the other hand, while we desire that the Local Governments shall share largely in any increase of revenue to which their own improved administration may lead, it is evidently reasonable and necessary that the Imperial revenues should share in this increase also."

This, as I say, is the declaration made at the time of the assignment of revenues. It is obvious, therefore, that the provision for the revision of the contract in the sense of withdrawing from the Provincial Governments part of the revenues they enjoyed, was an essential part of the original revenue-assignments system.

I ought to have mentioned when I was talking of the two measures which may be adopted to resumption of part of the increase of Provincial revenue, that it is more advantageous for the Local Government that it should get a full share of this increase of revenue for five years, and then have the excess taken from it, than that the excess should be taken from it every year as would necessarily be the case if it were allowed only portion of its share of increase and not the whole. So that of the two possible systems, that system which has been adopted is the most favourable one to the Provincial Governments. But there is another reason why the system of revision is necessary, and that is that the settlement of a permanent contract involves a dip into futurity which our financial experience at least shows us we are entirely unwarranted in making. I regret to say that there is nothing more uncertain in many respects than Indian finance. Last year we were swimming with our heads far above water, looking forward to a time when part of the taxes which have of late years been imposed might be considered as capable of remission. Before we had gone very far we saw that the calamity of a famine was upon us, and at the end of this financial year we proclaim deficits of large extent. Is that not a lesson that one ought not to prophesy too securely about Indian finance, or make arrangements which

involve an assumption of permanency in the relations between revenue and expenditure?

"There is one thing to be borne in mind in respect to these revisions, in respect to any contract of the kind, and it is this, that the Government of India is responsible for everything that is done in the matter of expenditure and revenue all over India. That is a responsibility of which it can never wash its hands. It can never say to a Provincial Government, 'I have handed over to you certain revenues, and I am very sorry you have gone beyond them but you must get out of the difficulty as you best can.' We cannot remain in that position and stand aside. We are as much responsible for a deficit in the Provincial accounts as we are for preventing a permanent deficit in our own account. It is, therefore, obvious that if we make a permanent contract with a Provincial Government, that contract must be an entirely one-sided one. It is a contract that must be based on these terms: that if everything is successful, and if the Local Government finds its revenues sufficient for its increase of expenditure, then the contract would remain good. But if the Local Government through any calamity loses its revenues, or finds an excess of expenditure over revenue which is perfectly unavoidable then the Government of India would have to come forward to help it. The contract can be permanent only in the cases in which its permanency favours the Local Government. It is rather assumed in all these discussions that a revision of contracts must necessarily be a revision in favour of the Imperial Government. Now I would draw attention to the fact that in the current revision, at any rate, the revisions have not been all in favour of the Imperial Government. We have found, as a matter of fact, that through certain circumstances which I need not here explain, certain Provinces, namely, the Punjab, the North-Western Provinces and the Central Provinces, are all in such a position that they can not be expected to get on without increase to their previous assignments of revenue. The revision of revenue in these cases has to be made to the detriment of the Imperial revenue. It may be said that we might have left those Governments to flounder in their deficit. But we cannot divest ourselves of responsibility, both financial and other, for their administration, and moreover we are their bankers; they cannot provide funds out of their present assignment to meet what we consider their necessary expenditure, and it is perfectly impossible for us to leave them in that condition. We have satisfied ourselves that this deficit of Provincial resources cannot be met otherwise than by adding to the Provincial revenue, and we have therefore in those three cases come forward to add to the assignments given them in 1892, and to establish them again on a sound footing, running from 1897. It is very natural that His Honour the Lieutenant-Governor and the other Governments which find themselves in prosperous circumstances, should decry this system of revision, and say that it is extremely desirable that revisions should not take place and that they should be left exactly in the position in which they are at present. But if a vote were now taken among the Local Governments, I can give the names of three who would give an opinion directly contrary to the opinion expressed by His Honour the Lieutenant-Governor. It is very curious, but I was reading a short time ago the record of certain deliberations which took place in 1892 among the members of the Government of India on this very question of prolonging the terms of the settlement. Sir David Barbour at that time was Finance Minister. He pronounced it to be impossible, as it most certainly is, but one of the members who pronounced very strongly in favour of prolongation and declared that the term of the contracts should be made longer was Sir Charles Crosthwaite who afterwards became the Lieutenant-Governor of the North-Western Provinces. If he were now asked for his opinion he would say, I am afraid, that Sir David Barbour was perfectly correct and would admit that the system of revision was necessarily a part of the Provincial contract.

"There is another theory to which utterance has been given to-day in the speech of the Hon'ble Mr. Sayani—a speech I admit which was very pregnant in suggestion, and which it will be useful for us to read at leisure—he made a suggestion that it was wrong that two-thirds of the revenue should remain Imperial and that one-third only should remain Provincial. I watched to see whether he would give any reason for this opinion; there was none

he simply said there were certain objects of expenditure which were very desirable under Provincial Governments, and if they had more than one-third of the revenue they would meet that expenditure. I have not the smallest doubt of it. I do not wish to hint that Local Governments make bad use of their money, on the contrary, I am quite sure they would make excellent use of more money if they had it. But taking the figures of 1895-96 the total amount of expenditure for which revenue has to be provided comes to 44 crores of rupees of Imperial expenditure, and 20 crores of Provincial expenditure. Well, we have for that purpose, as I have pointed out, a nearly equal amount of revenue, namely, 64 crores to distribute. At present we give 20 crores to meet Provincial wants and we keep 44 crores to ourselves to meet Imperial expenditure. Now, if we are going to start on some abstract principle that the Provincial Governments ought to have some theoretical proportion of this revenue and that that theoretical proportion is something more than 20 crores, that we ought on a sort of a general consideration of comparative necessity of Provincial heads of expenditure and Imperial heads of expenditure to give to the former more than 20 crores, then I ask how are we to provide for our own 44 crores? We have only 64 crores altogether. If we give 21 and. thus enhance the Provincial share of revenue by one crore or 5 per cent., we reduce our own available revenues to 43 crores. How, with that 43 crores of revenue, we are to meet 44 crores of expenditure, I confess I do not know. Of course it would result in our imposing some new tax in order to find the missing crore. And that, as I said in my first speech, is what I desire to bring home to hon'ble members; that is, there is no use of our talking of providing for increases of expenditure of any kind without considering where we are to find the money for it; that if expenditure is increased it means that we have either to put a direct burden upon the tax-payer or, at least, postpone a remission of taxes which would be otherwise possible.

"The Lieutenant-Governor has alluded to another matter which I cannot help thinking a very serious one, namely the consequences of the Provincial Governments having, like the Government of India, expanded their Councils. These Councils take, and are justified in taking, and it is their business to take, a very deep interest in the finances of their Provinces. They naturally see the requirements of the Provinces, and they naturally bring those requirements sharply and continually before the local administrations. The financial questions do not now lie between the Government of India and the head of the local Province. They are now questions between the Government of India and a local Governor, subjected to all the urgencies of his local Council. There is one difficulty in this position at present, a difficulty which will have to be met when we examine the question which His Honour has pressed upon us, a question to which I may say I have given no small amount of consideration. The difficulty I allude to arises from the fact that, under the present constitution of Provincial Finance, the Local Governments do not have to find funds by exercising their powers of taxation. A local Governor is not in a position to say to his Council regarding a great part of the expenditure pressed upon him that 'if you want this expenditure, you must be content to bear the necessary new taxation'. At present the expenditure is pressed upon him always in the shape of requesting him to get a new assignment from the Government of India. The burden, therefore, of supplying the money under present circumstances falls upon the Government of India. It is here that the difficulty arises, because each Province has to weigh its demands for expenditure, not against the burdens which it itself would have to bear, but against the possibility of throwing burdens upon the whole of India. Now in touching upon the subject, I wish it to be understood that I do not speak for my colleagues. I have stated that I have given some consideration to the question of an alteration, in some respects, of the Provincial system, because I feel with His Honour the Lieutenant-Governor that the present system is one which cannot last. The Government of India cannot be placed in the position of having to bear all the expenses and all the odium of having to impose new taxes; but at the same time if the expenditure, which is pressed upon us by the various Local Governments, is to be met, it is a question of new taxation and of nothing else. The idea which has struck me as a possible issue out of this—an idea regarding which I have conversed with various high officers and also with His Honour the Lieutenant-Governor—is that we

should separate the Provincial Revenue and Expenditure into two classes, one being the general account and the other the local account in every province. There is at present local taxation levied for local purposes, but there is no definition as between the appropriation of Provincial revenue, and the appropriation of Local revenue to these purposes. Local Boards bear only a portion of the expenditure for medical purposes, for educational purposes, for roads and various other things, and this is the class of expenditure in which Local Councils are naturally most urgent. It includes a class of expenditure which, as my Hon'ble friend Mr. Stevens mentioned, is extremely urgent in Bengal namely, that of sanitary improvement. But as matters are at present arranged, the local taxation is nowhere equal to meet the whole of this expenditure, and the consequence is that the Provincial Government has to meet a great deal of it itself. The result is that when pressure is put upon the Local Government to find funds for this class of expenditure, it is in the form of demanding further funds out of the general revenues for meeting the expenditure and not of proposing any increase of Local boards. Now it strikes me that it would be well to separate off the whole of this class of expenditure, whether it is met out of local taxation, or whether it is, as at present, largely met out of the general revenues, into a separate account, and in respect to that separate account, to make a permanent assignment from general revenues to the Local Government. There would be no revision wanted in a contract of that kind. If, for example, we found that we could separate off the whole of that expenditure as it stands in Bengal, we would say that for this expenditure a certain definite sum fixed once for all would be given out of general revenues in addition to Local taxation to cover the whole amount, then we might make that portion of the account an absolutely separate one. We would treat it as a separate branch of finance under the Local Government and under the Local Councils. The result would be that the Local Councils when they pressed, as they are continually pressing, (and I do not in the least degree wish to indicate that their action in pressing is unreasonable on their part,) but when they press for expenditure of that kind they would also know that they would have to find the means for it by some sort of local taxation. That is the theory of financial control and responsibility ; the whole theory is that those who press for expenditure should know that they will have to bear the burden of it. If, for example, we were to hand over the cesses and taxes as revenues for local purposes we would be placing in the hands of local Councils a power of getting more revenue if they thought it worth while. There is a system of finance of this kind which I took the opportunity of studying in Belgium some years since. There is there not only a central Financial body but a Provincial body whose functions are defined exactly in this way, that is to say, certain classes of expenditure are made over and are to be provided for by those Provincial bodies and the Government makes them a definite and final assignment for the purpose. The assignment in Belgium is part of the assessed taxes and the local taxes besides. The result is that these Provincial bodies, if they want to extend the class of expenditure in their charge, have to do it by finding local taxes or by adding to the assessed taxes. The assessed tax in Belgium is not equal in every Province. Of the total amount part is an assessment common to all Belgium which goes to the central Government, part is an assessment varying with each province, and going to the Provincial Councils. The Hon'ble Mr. James will also be glad to hear that one of the sources of Revenue of the Provincial Councils of Belgium is a dog tax.

"These are the general lines in which it seems to me a solution of many difficulties will be found. We will have to continue the present system so far as it relates to the general functions of the Government, that is to say, the administration of the country, the administration of law, and the various other big branches. With regard to this part of the account we have to do exactly as we do at present, continue the five years' contract system, but it is not for the most part in that class of expenditure that new and heavy demands are made on the Local Governments.

"And here I take the opportunity to say something about a particular demand in Bengal pressed upon me by more than one speaker to-day, and that is with regard to the General Hospital in Calcutta. In this matter I can speak for the Government of India and for His Excellency the Viceroy as well as myself. We

perfectly recognise the extreme urgency of this demand. It is very sad that when we compare the City of Bombay and the City of Calcutta we find one of them with magnificent hospitals founded by merchant Princes, and the other so devoid of proper provision of the kind. We do not possess these merchant Princes in Calcutta, and the consequence is that we have a General Hospital in which I agree with my Hon'ble friend Mr. Chalmers that the only thing to be done with it is to raze it to the ground. Now I will read a paragraph from the Government of India's letter of the 17th March last, to the Government of Bengal on this subject.

'The Government of India feel that this decision (that is to say, that we could not afford all the money the Lieutenant Governor asked for) will, in one respect, cause great disappointment to His Honour the Lieutenant-Governor, namely, in respect of his plans in connection with the European General Hospital in Calcutta. They do not differ from His Honour's estimate of the urgency of this work, * * *.

'The strain of the present famine has unfortunately further postponed the expenditure; but the Government of India, while excluding from immediate consideration any additions to the assignment on account of this special demand, hope that it may not be found impossible for them to give some assistance towards it when the financial horizon becomes clearer.'

"That is hardly a pledge, though I admit that it means that if we were well off we should try to find our way to helping the Lieutenant Governor of Bengal to build a hospital, which would be worthy of Calcutta and would meet the tremendous demand that there is in Calcutta for a decent European hospital.

"The Hon'ble Mr. Stevens has also accused me of want of generosity towards Bengal in this last Provincial settlement. I reply to the general accusation of illiberality by pointing out that at least I have been more liberal in this revision than in any previous revision the Government of India has been, inasmuch as in three provinces out of the eight I have enhanced assignments. But with that one passing objection I will address myself to his figures on the subject. And in passing, I demur altogether to His Honour's statement that the matter is in dispute between the Government of Bengal and the Financial Department. It is quite true that the Government of India has issued orders on the matter through the Financial Department, but His Honour the Lieutenant Governor is sufficiently well-acquainted with the course of business in the Government of India to know that in an important matter like this, although those orders were issued through the Financial Department, they are really the orders of the Government of India as a whole. Now I wish to draw attention to one paragraph in the Financial statement, in which I showed the exact figures of the way in which the various Provinces had been dealt with. If reference is made to paragraph 50 it will be seen that in the present revision we have allowed for expenditure in Bengal which is 10·9 per cent. in addition to the expenditure which was provided for in 1892. I think that is a very fair allowance on the face of it. If any Government increases its expenditure at the rate of 10·9 per cent. in five years, I do not think it has much to complain of if we say we do not see our way to allow of any further increase. His Honour the Lieutenant Governor has made a claim that his province contributes more to the Central Government than any other province. The question of what each province contributes is a very difficult one, and to tell the truth I do not think it can be solved. It is rather singular that precisely the same claim has been made on this occasion on the part of the Government of Madras. I know the Government of Madras believes that it is a sort of milch-cow for the supply of the other Local Governments of India. I do not wish to pronounce any opinion as to whether any Government contributes more than or less than its fair share. It is absolutely and entirely a question of opinion because although you can take much of the revenue and say it belongs to a particular province, you cannot say with respect to very large sections of the expenditure how much, in any distribution between the Provinces, ought to fall upon each. The Hon'ble Mr. James has been somewhat severely attacked in respect of his observations on this point, and I desire to come to his rescue in explaining some matters relating to the Government of Bengal. Although I do not altogether agree with what he said, still I may say that in respect to the question of the amount which the Government of Bengal contributes to the common fund, there is something to be said for

the view that in one respect at least Bengal does not pay the same amount of revenue and is not assessed on the same scale as the other provinces; that is of course in respect to its land revenue. Now I do not want to say anything about the Permanent Settlement; I accept it as a fact and there is an end of it. But there is one thing to be remembered and it is this. Supposing the various Provinces of India had each remained from the beginning on a separate financial basis; that their funds had not been joined altogether, as the Scotch lawyers say, in hotch-pot; that they had always been conducted on entirely separate financial systems, such as exist at the present day in the Australian Continent which has five separate Colonies, each of which is financially separate from the other. Supposing Bengal and the other Provinces had been independent up to the present day, I think it is quite evident that Bengal would have had to put up with a smaller scale of expenditure than other Provinces for the simple reason that it would not have the means of providing what the other Provinces can pay for; its revenue being in one respect assessed on a smaller scale than the other Provinces. I do not for a moment say that we ought not to place it in respect of expenditure on a level with other provinces, because my theory is, as I have already explained, that the revenues of India are the revenues of one single body and the expenditure must also be recognised as the expenditure of one Empire. But I think that it is quite fair to remind Bengal that in being placed on the same level with other provinces in respect of its demands for expenditure, it is receiving at the very least an adequate measure of justice from us.

"My Lord, I am very sorry at this late hour to take up more of the attention of the Council, but I do wish to make one or two remarks about the question of the poverty of India There is one false coin which I want to nail to the counter, and that is that statement about the ₹27 which has appeared over and over again in the arguments of every individual who lectures upon the poverty of India. I do not know how often I have seen it, but I cannot say I have heard it in Council until to-day and I will now show exactly what the statement means. I am afraid that the Hon'ble Members who have hitherto been arguing on the basis of this ₹27 statement for the poverty of India have failed to take into consideration what its real meaning is.

"The statement is made in paragraph 173 of the Financial Statement of 1882-83. I brought that Statement with me as I brought a great number of other documents. Long experience has shown me the general line of argument that will be taken in these discussions, and I bring accordingly a number of documents with me on the chance of their being required, and this is one of them. The statement accurately quoted is that 'it has been calculated that the average income per head of the population in India is not more than ₹27 per year.'

"Now this ₹27 is always talked of as the income of a family. The Hon'ble Member to-day compared it with the English agricultural wage. The English agricultural wage is a wage upon which a family lives. This ₹27 is nothing of the kind. It is the average income per head of the population. Well now, if you look at the census returns for India you will find that the proportion of males between 15 and 50 years of age is as nearly as possible one in four of the population. This statement of ₹27, therefore, is exactly the same as saying that the average annual income enjoyed by every male person in India between the ages of 15 and 50 is four times ₹27, or ₹108, that is ₹9 per month. Well, no person who knows India would base upon a statement that to every male adult there was an average income of ₹108, or of ₹9 a month, the argument that India was utterly poverty-stricken. I quite admit that there is unfortunately a very large number of male individuals who do not possess the ₹108, but that is by reason of some other gentlemen, who are more fortunate, running off with so much more than their share of the average. Far be it from me to deny that, reckoned by western standards, the population of India is a poor population, but such descriptions of its poverty as have to day been given are not justified by the calculation that every adult male in India enjoys on the average an income of ₹9 per month.

"As the Hon'ble Sir Griffith Evans pointed out, it is very common to look back upon the good old times, but if there were golden times in

India before we ourselves came into the world, I have never seen any facts brought forward in support of the statement, and the facts quoted by the Hon'ble Mr. Charlu seem to me to have a very peculiar application to it. He says it is a matter of common notoriety that last century European adventurers came over here and went home with their pockets full of loot. Well, the allegation with which he was contending was that the natives of India were subject to robbery and oppression of every kind; that they never got anything wherewith to enjoy themselves; and to say that European adventurers then joined in the loot is surely not to say that the people were better off in India at that time. But as bearing upon the particular question I will recall one statement which Hon'ble Members will find for themselves in the history of famine given by the Famine Commissioners. The only famine of ancient times of which we have any particular information is one in which the Famine Commissioners say it was computed that one-third part of the population died. Well, if one-third part of the population died,—we won't say that no part of the population dies now—no doubt a famine like the present cannot be survived without a large increase of mortality, but it is absolutely certain that nothing like one-third part of the population will die this time—the mere fact that one-third part of the population died proves that at that time the population was extremely poor and where not enjoying a golden age. A theory has been started—not in this Council—that famines are entirely due to the wickedness and neglect of the Government of India. My own impression is that famines occurred before the British Government in India came into existence, and that the British Government cannot be charged with introducing the state of things in which famine occurs and in which famine reduces the people to great misery. It is certain that we cannot look back as I am afraid some gentlemen do —I am not speaking of members of this Council—we cannot look back to, and sigh for the return of, the halcyon days in which the failure of the monsoon was the death-warrant of one-third part of the population affected.

"I pass on to a few questions which Mr. Playfair propounded to me and to which I must either give an answer or refuse to give an answer. I find that, barring questions which I have already dealt with, the only question he has asked me is that relating to the loan. I am afraid I must, on the present occasion, refuse to give any information as to what the intentions of the Government are. We mean to make the fullest use of that reserve which we express every year in the Budget when announcing our intentions. I will only say, with reference to one point, namely, that we have no information as yet which would warrant us in saying that we shall have any contribution from Native States towards the loan. So far as we know the loan, if it is issued, will be offered for public subscription.

"The Council will be glad to know I have no more matters on which I have taken note which will require any observations from me. I thank Hon'ble Members for the attention they have given me during the time I have taken, and I regret that I was not able to collect my remarks within a shorter time. It has been necessary for me to occupy the Council for some time, as I cannot avoid replying to the remarks that have been made on the Financial Statement; and such remarks on an occasion like the present form the main portion of the day's business."

His Excellency THE PRESIDENT said:—"The comments of Hon'ble Members, though they have covered a wide field, have naturally to a large extent assumed the form of a criticism of the action of the Government in one or other of the Departments for which my Hon'ble Colleagues are responsible, and they have offered such explanations as were available. I suppose of no question is that more true than of the Provincial Contracts which have bulked largely in to-day's discussion. So far, therefore, as the action of the Government of India in this matter on this occasion may be deemed to require defence, I associate myself entirely with the Finance Member, and wish to add nothing.

"I should, however, like to say a word or two on the attitude towards each other of the Government of India and Local Governments on matters such as

this. There is, I think, in some quarters an unfortunate tendency to represent their interests as, if not hostile, at any rate as distinct and separate, perhaps conflicting. I consider this a mischievous mistake. The Government of India and the Local Governments have each their functions to perform; but, as the Lieutenant-Governor has pointed out, they are all parts of the Government of the Queen-Empress in India, and it is their duty to look for agreement and not for difference. For my part I entirely sympathise with the Lieutenant-Governor and the Local Governments in their desire to have means at their disposal to improve their administration and to minister in various ways to the well-being of the people. We in the Government of India are not altogether without aspirations of the same kind, but I admit that the Local Government is brought necessarily nearer to the every-day needs of the people. The question is not as to the object, but as to the means of attaining it. Now a subordinate Government in any country can attain its objects either by using resources under its own control, or by drawing upon resources which are outside its own control. So long as it restricts itself to the first, it has a just claim to a large measure of independence. But, unfortunately, that state of things is seldom possible unless the purposes for which the subordinate Government is created are confined within narrow limits. In all other cases the subordinate Government is compelled to appeal to the Central Government for assistance, because it is the Central Government alone that can levy and administer the funds that are derived from the general taxation of the people. And this must include all the more important heads of revenue.

"The appeal on behalf of the subordinate Government is no new thing: I have seen it again and again in various forms, and not only in this country Sometimes it is for a larger share of the revenue, sometimes for greater permanence in the amount of the assignments. In every case, if the Central Government does its duty, it is told it has given less than what the Local or subordinate Government wants. I think myself that it is desirable to make as much as possible of the revenue of a Local Government consist of moneys which are entirely under its own control, and it may be well worth while to consider, before the termination of the new contracts, whether the Government of India could not devolve upon Local Governments the responsibility of levying some part of the revenue which now consists of allotments from Imperial Funds. The Hon'ble Sir James Westland, speaking on his own behalf, has indicated that he is not averse to the consideration of the subject, and the Lieutenant-Governor has made a suggestion as to bringing it before a conference, of which I will only say that it will receive from me as a friend of decentralization, all the consideration which is due to any suggestion coming from him. But whatever the Imperial assignment, be it a larger or a smaller proportion, I maintain that the Government of India will fail in its duty if it does not retain a constant and strict control over it. Remember, every assignment of this kind is a direct hindrance to the remission of taxation. So long as the same body imposes the taxation and is responsible for the expenditure, it can be called to account if taxes become excessive; and it will always bear in mind the necessity of diminishing, if possible, the imposts on the people. The tying up of a large part of its income by its permanent devolution to a spending authority, which is not also a taxing authority, directly diminishes these incentives to economy, and the inevitable result is that growth of income is used for increase of expenditure and not for remission of taxation. Without a surplus, remission of taxation is rarely, if ever, practicable; but, as I share with my Hon'ble Colleague the hope that the financial prosperity of India is suffering only a temporary eclipse, I think he was bound to use every effort to secure that the full opportunity remains when the sun of prosperity shines forth once more.

"The consideration to which I have just referred, *i.e.*, that we need not deem ourselves enveloped in a perpetual cloud of misfortune, leads me to another point on which I desire to say a word. I have observed it said that

'the Viceroy's zeal for railway construction, which in itself is commendable enough, is now leading him to insist on an expenditure which the country cannot afford;' and I have noticed that most Hon'ble Members have alluded to the subject and have done so in terms to which I can take no exception, and have made an earnest, I might say a personal appeal to me to re-consider this matter. Now I never like to take to myself credit that does not belong to me; and if zeal in railway construction is commendable, I can only, as I have said before, share the commendation with successive Secretaries of State. They and I came to the conclusion that the time had come when the rate of progress in railway construction might with advantage be increased, and I was able last year to explain to the Council the general outlines of the programme which we hoped to carry out. I believe that no one then thought it unreasonable. Certainly it did not exhaust the possibilities; for we found, when we looked into the matter a few months later, that we had received some 130 other schemes for the extension of railway communication. But it is said the times are different, and there is a pressing demand for a large sum of money. Well, I will be perfectly frank in the matter. This seems to me simply a question of ways and means. We have our financial advisers in India, and our financial advisers in England. If between them they cannot find the funds required for a programme of railway construction, beyond all question it must be curtailed. I should be the last man to object. So far they do not think this necessity has arisen, and I am glad of it, as I suppose most Hon'ble Members are glad. I am glad, however, for special reasons of my own. I have confessed to some share in increasing our rate of railway construction, but I think I have been far more anxious to systematise our methods. I am convinced that the system, or rather want of system, which used to prevail, was the cause of an immense amount of unnecessary labour, annoyance, and waste. Mr. Trevor has explained to you certain steps we have taken to ensure a comprehensive review of the situation. I look to great results from that review, when the procedure has been completely developed. But there is one thing essential to its success and that is that the decisions which result from it should be absolute—that the programme, when settled, should be adhered to. I believe that never before has a more strenuous effort been made to adhere to a declared programme than during the last year. So far from being carried off our heads by the glamour of new lines, we have resolutely resisted many a temptation to add to them. One of the chief difficulties in famine relief operations is to find works on which to employ the people, and not unnaturally new railways are frequently suggested. We have strictly adhered to our principle not to embark in any railway not included in our programme. And we have been able to do this without in any way curtailing the opportunities of local authorities; for, as one of the results of our conference, we were able without any delay to indicate to all Local Governments what lines in their districts were sufficiently advanced in the way of survey or otherwise to enable us to define the alignment, and we told them that in these cases we were prepared to make such arrangements that the earthworks should be available for relief works.

"I hope I have said enough to show that my only object is to treat railway construction as a simple matter of business. I believe strongly in its being beneficial to this country. I desire to see its progress steady rather than rapid, and I know that sudden changes and contractions are fatal both in method and economy. But I have never wished, and would never consent, to set it above all other considerations.

"It is impossible not to read famine in every page of this Budget. It has swallowed up the hopes the Hon'ble Finance Member held out to us last year, and we are still unable to see clearly how or when we are to escape from its influence. I could have wished that the Hon'ble Mr. Ananda Charlu, who has in former debates criticised the action of the Government in the matter of famine insurance, had seen his way to acknowledge that the experience of this winter has shown that the Government has not, after all, been so far

wrong. Can any one venture to calculate what the position would have been if the Government, during the last fifteen years, had not imposed taxes for famine insurance, and spent the money on the improvement of the means of communication and other protective works? Further, if the estimates which the Local Government have made are correct, the sum total of the deficits which my Hon'ble friend has to make good does not amount to more than 4½ crores of rupees. But the famine insurance money, so far as not spent on protective works, has been used to permit the Government to avoid the creation of debt. That means to say that at this present moment the Government would otherwise have incurred 5 crores more of debt, and it could now raise 5 crores, if neccssary, for the purposes of famine expenditure without increasing its liabilities beyond what they would have been had the idea of famine insurance never been propounded. The Government can raise this money now, and on better terms than ever before; and it seems to me that the fact that they have dealt wisely and prudently with the yearly balances devoted to this purpose is abandantly proved. I think there will be no dispute that we are at the present moment providing without stint whatever is required for coping with the great calamity. I would fain hope that the recognition of these facts would tend to promote a sense of the integrity of the Government, and also general good feeling. We have alongside of it that remarkable manifestation of generosity which has poured into India from all parts of the world during the last few weeks—a constant flow of subscriptions, large and small, exceeding yesterday a crore of rupees. It is impossible to estimate the blessings which will accrue to many a sufferer, and I think I may without impropriety on behalf of this Council acknowledge the deep gratitude we feel to the Lord Mayor of London, and all those who have worked with him to bring about this splendid result, and to testify to the sincerity of their sympathy with their fellow-subjects in distress.

"One word only I would add. My Hon'ble friend Mr. Sayani in the course of his remarks referred to one point, namely, the condition of the people. No one feels more keenly than I that Government does not discharge the whole of its duty even if it provides adequate funds for meeting calamities like that of this year and administers them well. These calamities are, I fear, inevitable in the circumstances of India. But Government is bound never to close sight of the condition of the people, or to fail to take any opportunity it can of ameliorating it. Sir J. Woodburn mentioned the other day that the subject, and specially the indebtedness of the people, had been under our consideration. It is one of the disappointments of this year that our work in this respect has inevitably been postponed. Our programme of work had been laid out, and it might by now have been well advanced, but the events which have had the result of practically doubling the already heavy work of the two departments under the charge of the Hon'ble Member have been too strong even for his indefatigable energy. But this I can say, that we have no intention of dropping the subject. Personally I may be deprived of the opportunity I had desired of associating myself with reforming legislation. I cannot but be conscious, as I am speaking with a few minutes of the close of the fourth session during which I have had the honour of presiding at this Council, that the deliberate forms of Indian legislation do not encourage the expectation that I can see any large measures such as those I have referred to pass into law during my time here. But we can at least pave the way, and I have every confidence that in sympathy for the people, and in earnest wish for improving the conditions under which they live, the present Government of India will be able to show a record of which they need not be ashamed."

The motion was put and agreed to.

LOCAL AUTHORITIES' (EMERGENCY) LOANS BILL.

The Hon'ble SIR JAMES WESTLAND moved that the Report of the Select Committee on the Bill to enable local authorities to borrow money for emporary emergencies be taken into consideration.

The Hon'ble PANDIT BISHAMBAR NATH said :—The Bill to enable local authorities to borrow money for temporary emergencies. I am afraid it is rather late. I have only to offer a few remarks. The addition of a sub-clause to section 2, as has now been proposed by the Select Committee, does not afford substantial relief. If the permission to be given to local authorities to borrow money for temporary emergencies means or implies imposition of a fresh tax or taxes, sooner or later, by empowering or authorizing such authorities in that behalf, I crave leave to demur to the measure.

" The present situation is a critical one, as it has not inaptly been described by a contributor to a well-known daily local paper. His words are to the following effect :—' Famine on right; starvation on left; plague in front; and death on back.' In connection with the other minor troubles to which the exigencies of the time have subjected the people rather sorely. I believe it would not be out of place altogether if I were permitted to say here, simply for the information of this Council, that the military vigorous operations, conducted in the city of Poona and Bombay, for cleansing and searching purposes, innocent in themselves, indeed, are supposed to cause annoyance and irritation; while a rule framed regarding the burial of the dead bodies of bubonic patients, with chloride of lime, is reported to have been condemned with indignation by almost all the influential representatives of the Muhamma lan community at Lucknow. If the rule were enforced, such treatment of the dead would become intolerable. Moreover, such insignificant incidents, however well-intentioned they may be, are, I am sorry to find, apt to be misconstrued by the people of this country when they are panic-stricken.

" Leaving this little digression aside, I beg to resume that the imposition of any fresh tax, emergent as it may be, would, to say the least, be regarded as out-heroding Herod. As the people have enough of imperial and local imposts to pay, it is not expedient to devise further means for adding to their unbearable burdens, at least until they are our of danger.

The Hon'ble Sir James Westland has cited chapter and verse from certain enactments relating to the Municipalities and District Boards in Bombay, Punjab, Central Provinces, Burma, Bengal and the North-Western Provinces and Oudh, with the object of showing that the present measure imposes no obligation upon the local bodies, but that it simply enables them to borrow money, if they desire, on the security of their funds, for meeting their obligation. I am not prepared to dispute the soundness of the argument of the Hon'ble Member. I have also full sympathy for the present distress of the weavers of Sholapore and the lace-workers in Delhi. What I mean to object to is that, if in the event of their additional borrowings, the local bodies find the funds at their disposal insufficient for repayment of the loans they might be obliged to raise, a fresh tax shall have to be imposed, the proceeds of which would in all probability be set apart for satisfaction of the debt, without allowing to spend such proceeds on general purposes. Where a tax is once imposed, no subsequent appeal proves successful in getting rid of it, even after expiry of the probable period for which it is levied.

" As the North-Western Provinces and Oudh Municipalities Act (Act No. XV of 1883) does not provide for the establishment and maintenance of relief works in time of famine, those municipalities must, I think, come within the purview of the sub-clause that has now been added to section 2 by the Select Committee.

" It is true that local bodies will not be extravagant in expenditure upon emergencies, and that their borrowing powers would be exercisable subject to the previous sanction of the Government of India or that of the Local Government, but if they borrow money for famine purposes and then have no means available for its repayment, how are they to meet the liability they might incur except by imposing taxation ? They cannot stop their ordinary or starve their necessary works ?

The Hon'ble SIR JAMES WESTLAND said :—" I do not think it necessary to make any further remark on this subject unless that I think the section introduced by the Select Committee prevents, so far as the province represented

by the Hon'ble Member is concerned, the operation of the Act in the direction to which he objects. It is quite true that in Bombay the Municipal authorities have powers to do what in the North-Western Provinces they have no power to do. We are not conferring these powers upon them, and we are not saddling them with any expenditure they are not bound to make. Any result of that sort which may arise, will arise not by reason of the Act, which I shall presently ask the Council to pass, but by reason of the Act which at present stands on the Statute Book in regard to Municipalities in Bombay."

The motion was put and agreed to.

The Hon'ble SIR JAMES WESTLAND moved that the Bill, as amended, be passed.

The motion was put and agreed to.

INDIAN STAMP ACT, 1879, AMENDMENT BILL.

The Hon'ble SIR JAMES WESTLAND moved that the Report of the Select Committee on the Bill to amend the Indian Stamp Act, 1879, be taken into consideration. He said:—"It will be observed that I have an amendment to propose presently. The amendment is purely a formal one. It arises in this way. As the Bill was drafted it made a reference to the General Stamp Act of 1879, but the provisions of the Bill are that certain sections be incorporated in and become part of the Act of 1879. The consequence is that the Act of 1879 is to be quoted not as the Act of 1879 but as 'this Act'. Hon'ble Members will observe that the amendment is little more than a grammatical one and I shall move it in due course. There is also another remark which I desire to make with reference to the operation of the Bill. The Secretary of the British Indian Association, writing on behalf of the Association, says that he entirely approves of the objects of the Bill, but he points out one curious bye effect. It is this: In the second schedule to the Act it is provided that certain leases, namely, agricultural leases, shall be altogether exempt from taxation. The Act itself, in the part of it which we amend provides that transfers of leases shall be liable to the same duty as leases. That provision we now cancel by making transfers of leases liable to a specific duty, but that specific duty unfortunately covers all transfers of leases. The consequence is that it covers transfers of leases which are free under the Act as it at present stands, the transfers, namely, of those agricultural leases. This is an effect which was not in the least degree intended. It is a simple matter and one in respect to which it is not necessary to move a formal amendment. At the same time the Government will take the opportunity of using the powers of exemption which it possesses under the Act of 1879 and will to-morrow issue a notification declaring the exemption of this particular class of transfer of lease from any duty to which it may be liable under the Act. By this means the object which is sought for by the British Indian Association will be gained."

The motion was put and agreed to.

The Hon'ble SIR JAMES WESTLAND also moved that in the proviso to section 7B, proposed to be added to the Indian Stamp Act, 1879, by section 1 of the Bill, as amended by the Select Committee, for the words and figures "under the Indian Stamp Act, 1879, prior to its amendment by this Act," the words and figures "prior to the twenty-sixth day of March, 1897," be substituted; and for the words "that Act" the words "this Act" be substituted.

The motion was put and agreed to.

He also moved that the Bill, as amended, be passed.

RELIGIOUS ENDOWMENTS ACT, AMENDMENT BILL.

The Hon'ble RAI BAHADUR P. ANANDA CHARLU moved for leave to introduce a Bill to amend Act XX of 1863 (*to enable the Government to divest itself of the management of Religious Endowments*). He said :—" I ask for the forbearance of the Hon'ble Members when I make a few remarks, with which I mean to supplement what I had to set forth—necessarily very briefly—in the Statement of Objects and Reasons. I wish you, in the first place, to note how I have been at pains to proceed along the line of least resistance. The first paragraph in my Statement of Objects and Reasons makes this abundantly clear, as I venture to think. The control I have provided is at the minimum standard of interference consistently with its proving effective. Agreeably to my first ideas, I would place even the dismissal of trustees for proved misconduct in the hands of the *Central* Committees. In my view this appeared, and still appears, to be an adequate enough guarantee in the interests of the trustees, and my reasons are as follow :—

" The control by the Committees that have been appointed for the purpose under Act XX of 1863 has been *nominal* at best, and the responsibility for it is universally traced to the *defective* law, which at present drives either the dissatisfied Committee-men or dissatisfied worshippers to Courts to displace trustees guilty of misconduct. The most palpable fact to be noticed is this, that while the Committee-men or the worshippers have to find their own funds to bring the culprit to book in these circumstances, the trustees—in safe and unrestrained possession of the endowment funds—draw upon these latter to the full bent of their most extravagant inclinations. In such an unequal fight it is too often the case that the complainants get worsted. But it is worthy of note that, even in cases where they are *successful*, the trustees removed take prior care to show the possession of very little tangible property to recoup the victors as to the costs incurred ; and the consequence is that these costs had often to come out of the very endowment-funds which the litigation was started to *protect*. *Therefore, in either case, the endowment is a distinct, heavy and unjust loser.* Any system that will obviate this most undesirable result must *for that single reason alone*, be a decided improvement upon the present state of things. In view to gain this paramount object, I eliminated all necessity to go to law. This I did by making the District Committee primarily and the Central Committee ultimately to be the final arbitrator on the question.

" Another stumbling-block in the way is section 18 of the present Act, which provides for a preliminary enquiry before a suit is filed. It is, so to speak, twice-cursed, *i.e.*, (1) it harms the one who seeks to condemn, and (2) harms no less the person whose condemnation is *bonâ fide* sought. By the way, one cannot but note that all the most useful provisions of the law in relation to discovery and the like are not available to the parties. Firstly, it has always been impossible, in the nature of things, for any plaintiff to begin with all his evidence cut and dry. Nor would it be possible for him to anticipate all possible defences. In such circumstances the materials with which one would ordinarily go before the Court as plaintiff would be necessarily meagre, and an immense risk is thus run. This cannot but act as a frightful deterrent even in the face of very strong *primâ facie* grounds for suspicion. So much for the operation of the section as against the would-be plaintiff. Its effect, as against the trustee, is no less serious. To begin with, he must find that, at the end of the preliminary enquiry, if the suit were allowed, he would in a sense stand condemned before ever the suit has actually been launched. *The judge, who would have to try him, had already made up his mind against him so far, that he could not bring to the trial a mind without a bias.* He could not, as matters now stand, help becoming, so to speak, a grand jury, a policeman and a judge *rolled into one.* This state of things is utterly inconsistent with justice, either to the would-be plaintiff or to the trustee, and its only effect has been vexatious harassment of the trustee or a needless embar-

rassment to the public-spirited men who, in an unlucky hour of righteous wrath, go, so to speak, to the hazard of the die.

"One plausible objection to this part of my scheme is that persons who have 'vested interests', as the trustees are too often called, would thereby be irremediably at the mercy of five or six men. My obvious answer to this is that, even in matters of life and death in the Provincial towns and in other matters involving serious loss of liberty, reputation or property in the districts, five or six men as jurymen *do* at present give a final verdict. I ask if the forfeiture of an honorary office is, comparatively speaking, of much graver importance? I think not; and let me point out that the present Act itself contains, in the provision to refer disputes to arbitration (section 16), an exactly similar mode of giving finality, such as belongs to the verdict of a jury. I may add that there can be no 'vested interest' to do wrong. At best here is a choice between two evils, and prudence counsels the choice of the lesser one. My view is that of the two evils—the evil now existing and the evil of possible injury to a trustee—the latter is by far the lesser one. *As for the endowment itself*, the balance of advantage is overwhelmingly in its favour, among other reasons, by placing law Courts beyond temptation to all the parties concerned. This is the conclusion I have come to after considering all the bearings of the case. In this conclusion I have a vast following.

"But I have since had reason to believe that such a provision might be viewed as rather a drastic or violent provision to start with, and that the existing safeguard of a suit and of the decree of a District Court would most probably be insisted upon as an indispensable provision. I have altered my scheme in deference to such a view, but, after all, if the rest of the Bill is acceptable, this change, I think, will make little appreciable difference. Perhaps it is, on the whole, expedient that the intercession of District Courts is not altogether eliminated on the single point of the dismissal of the trustees. This will reassure, rather than alarm, the trustees and their friends, and I see no practical advantage in staking my proposal on insisting on placing the power of dismissal in the hands of the Central Committees of each religion or sect.

"As regards the principle of constructing the district electorate, I have departed as little as possible from the provisions of the Act (XX of 1863) now in force. That Act provides, indeed, that the Local Government shall name the members of the first committee, but it lays down at the same time that the nomination shall be in accordance with the wishes of the respectable followers of each religion. In my Presidency, *i.e.*, in the Presidency of Madras, committees contemplated under Act XX of 1863 were mostly, if not in all cases, formed. To them, rather than to the Local Government, I have assigned the duty of working the Act, if my Bill will be so fortunate as to ripen into an Act. In taking this course I am only carrying out the principle of the existing Act, XX of 1863; for what that Act insists upon is that some system of election should be devised to fill up vacancies after the first members have been named by the Local Government. I have taken care to avoid the principle of "one man, one vote," as I found it to work no small mischief where, in my innocence, I counselled it to be tried in regard to one temple, and I have therefore restricted myself to the opinion being taken of the better classes of worshippers—classes by no means difficult to spot. The classes excluded by such a provision may be set up by designing men to protest, from a selfish motive, but these will soon see fit to acquiesce in what my Bill provides for. Having regard to the limited purpose for which the electorate must come into being, we need not aim at any broad fundamental principle or strive after a council of perfection. It would be quite enough to seek for some system which might fairly serve as an analogy and adopt it or adapt it as the case may be. The system upon which the list of jurors is drawn up offers a fairly good analogy to go upon. A little more care and trouble in reaching the proper men must result in a list good enough in all conscience. A list constructed with very much less care is good enough to supply persons fit to pronounce a *final* and indefeasible verdict on no less than a question of life and death in the Presidency-towns, and in respect of liberty, reputation and property in the districts. I venture to think that there can be no ill-adaptation of means to the end, if the district

electorate is built up as are our jury-lists with the further safeguards I have provided. What I should like to point out here is that no other workable and acceptable system has been possible for nearly a quarter of a century now, or seems to be possible in any near future, and 'not to decide' in favour of my scheme is, so to speak, to decide in favour of the anarchy of the present. If there have been disinterested and self-denying founders of grand charities in the past, the communities which produced them will surely produce men who, in the present day, would safeguard them by doing, after all, very much less, namely, by seeing to their preservation only. It is a well-known Aryan dictum, universally believed in by every true Hindu, that he who *preserves* a Dharma renders as good service as its *founder* himself. What is now needed is a *real* opportunity to do so. Once there is a *reality* of a controlling agency in lieu of the present moribund or checkmated committees, *and the trustees see it, they will themselves* initiate desirable reforms *of their own accord* or do so under mere persuasive pressure, so as to utilise the funds at their disposal in broader senses of charity than they recognise or can or will realise at present and thus give effect to the spirit of the intentions of the donors. To speak an unvarnished truth, there has been of late so little inter-action between them and the educated classes that each set has misjudged the other. Brought into closer relations, as the two sets would be under my scheme, and they understand the altered conditions, I am honestly hopeful that, after a brief period of transition, during which temporary mutual jealousies would give place for a final and better mutual understanding, all friction, worth the name, would disappear and a harmonious action would follow.

"I hope and trust that the general intelligence of my countrymen, in whose shrewdness I have great faith, would realise the soundness of my position.

"I have made an important departure from the *status quo*, namely, that the members of the committees would hold office *for a term of years* and *not for life* as now From this I expect a vast amount of good. Whatever the conditions in 1863 or soon after that date, they have materially changed since. Men, ready to render honorary service to the public, have come to the front in larger numbers in recent years, and the system of imposing public duty for a term of years rather than for a life-time has not only come into considerable favour, but has been found, on the whole, to work excellently well. This by itself, without more, is reason enough for the departure. Apart from that consideration, there is, I think, solid reason for holding that the system which I propound is by far the best, as it offers opportunities to correct initial errors, without having to wait till death brings relief—a species of relief which does not come conveniently or for the wishing. Short of gross misconduct, which entails the prescribed pains and penalties, we can well conceive of forms of dereliction of duty which would tell prejudicially on the well-being of the trust, but without drawing on the culprit those pains and penalties. Such cases are bound to be not a few. To afford, at short intervals, opportunities for reaffirmance in case of fitness or for supersession in case of incompetency is a decided advantage which cannot be overrated, not to speak of the invariable good that must come of letting fresh blood in, even with the risk of replacing one set of good men by another set of good men. A widespread ambition, in the adherents of a religion, to emulate one another and to displace one another for no other tangible reason than to serve the public is, on the whole, sufficiently beneficial to be favoured, fostered and given the freest scope to. To block its way is, to my mind, an attempt to thwart the course of a natural law. These constitute my justification for standing up for a term of years in preference to a tenure for life.

"Another point in which my scheme differs from the present law is that I abolish the distinction which the present law makes between the endowments which had been under the direct control of the Government at one time and those that had not been so. I see no sound reason for maintaining that distinction. One class is as much trust-property as the other. Malversation of the one class is as culpable as of the other. If only some of the trusts came originally under the Government supervision and not the rest, it was, I think, purely an accident. There could be nothing inherent in the trusts which had remained outside

Government control, necessitating that they should so remain outside that control or any control for that matter. Even the actual initial founder of an endowment could not, after he had once dedicated the endowment to the public, touch it or claim to divert it from the purpose declared at the time of dedication. A mere successor of his is *à fortiori* absolutely debarred from frittering or whittling it away. I have not the least doubt that, had such cases been brought to the notice of the Government as they occurred, the Government, as then disposed, would have taken the trusts to which they related as fully into their hands as they had done as regards the others. I therefore maintain that the distinction under reference is utterly untenable and unnecessary.

"In submitting my Bill to His Excellency for sanction, I inserted in it a section, exempting the Central Committees from payment of all Court-fees, and I did so as a hope was held out to that effect by His Excellency in 1894, when dealing with a Bill sent up from Madras. But the terms of the sanction accorded to me did not cover that section. I have therefore omitted it. But I take it that the objection to having such a section at the present initial stage may not preclude hope that it may yet receive consideration at later stages of the Bill.

"I have made no secret of my Bill. It has been published far and wide. It has elicited a great many personal opinions in its favour. Most of the organs conducted by my countrymen in English have decidedly pronounced in its favour. Others, I feel confident, will follow suit. With the intelligence of the country on my side—with the strength of the *Amrita Bazar Patrika*, the *Indian Mirror*, the *Hindu Patriot* and the *Bengalee* of Calcutta and of the *Hindu* and the *Standard* of Madras, of the organs conducted in English, and the *Hitabadi*, fast developing into a powerful and leading vernacular paper, explicitly behind my back already, and above all with the Government standing neutral and aloof, I cherish a strong hope that the Bill will successfully pass through the ordeal."

The Hon'ble SIR JOHN WOODBURN said:—"The Government consents to the introduction of the Bill which the Hon'ble Member has from laudable motives prepared. But it must be distinctly understood that the Government is not a party to it. The Government has laid down the principles of its relations to religious endowments in the Act of 1863, and to those principles it adheres. The Bill of the Hon'ble Member is in the main an endeavour to secure through the existing non-official committees a closer control of the management of these endowments. That is an aim which can only be successfully prosecuted, should it appear that it has the general support of those interested; and the Government reserves to itself an absolute right to oppose the Bill, if that appears expedient, in its later stages."

The motion was put and agreed to.

The Hon'ble RAI BAHADUR P. ANANDA CHARLU introduced the Bill.

The Hon'ble RAI BAHADUR P. ANANDA CHARLU moved that the Bill and Statement of Objects and Reasons be published in the Gazette of India in English, and in the local official Gazettes in English and in such other languages as the Local Governments think fit.

The motion was put and agreed to.

The Council adjourned *sine die*.

J. M. MACPHERSON,
Secretary to the Government of India,
Legislative Department.

CALCUTTA;
The 26th March, 1897.
